of the Regions

# Stakeholder Workshop

## “Towards a Zero Pollution Monitoring and Outlook”

Day 1, 24 May 2022

# Agenda

<b>10:00</b>	<b>Welcome and opening – purpose of the meeting</b>
<b>10:15</b>	<b>Session 1: Policy context and link between monitoring frameworks</b>
11:00	Break
<b>11:15</b>	<b>Session 2: Zero Pollution Monitoring</b>
13:00	Lunch break
<b>14:00</b>	<b>Session 3: Zero Pollution Outlook</b>
15:45	Break
<b>16:00</b>	<b>Session 4: Discussion and conclusions</b>
17:00	End of meeting

# Welcome and opening

Purpose of the meeting

# Session 1: Policy context and link between monitoring frameworks

Presentations from DG ENV

# Monitoring framework for the 8th Environment Action Programme

**Workshop**  
**Zero pollution Monitoring and Outlook**  
**24 May 2022**

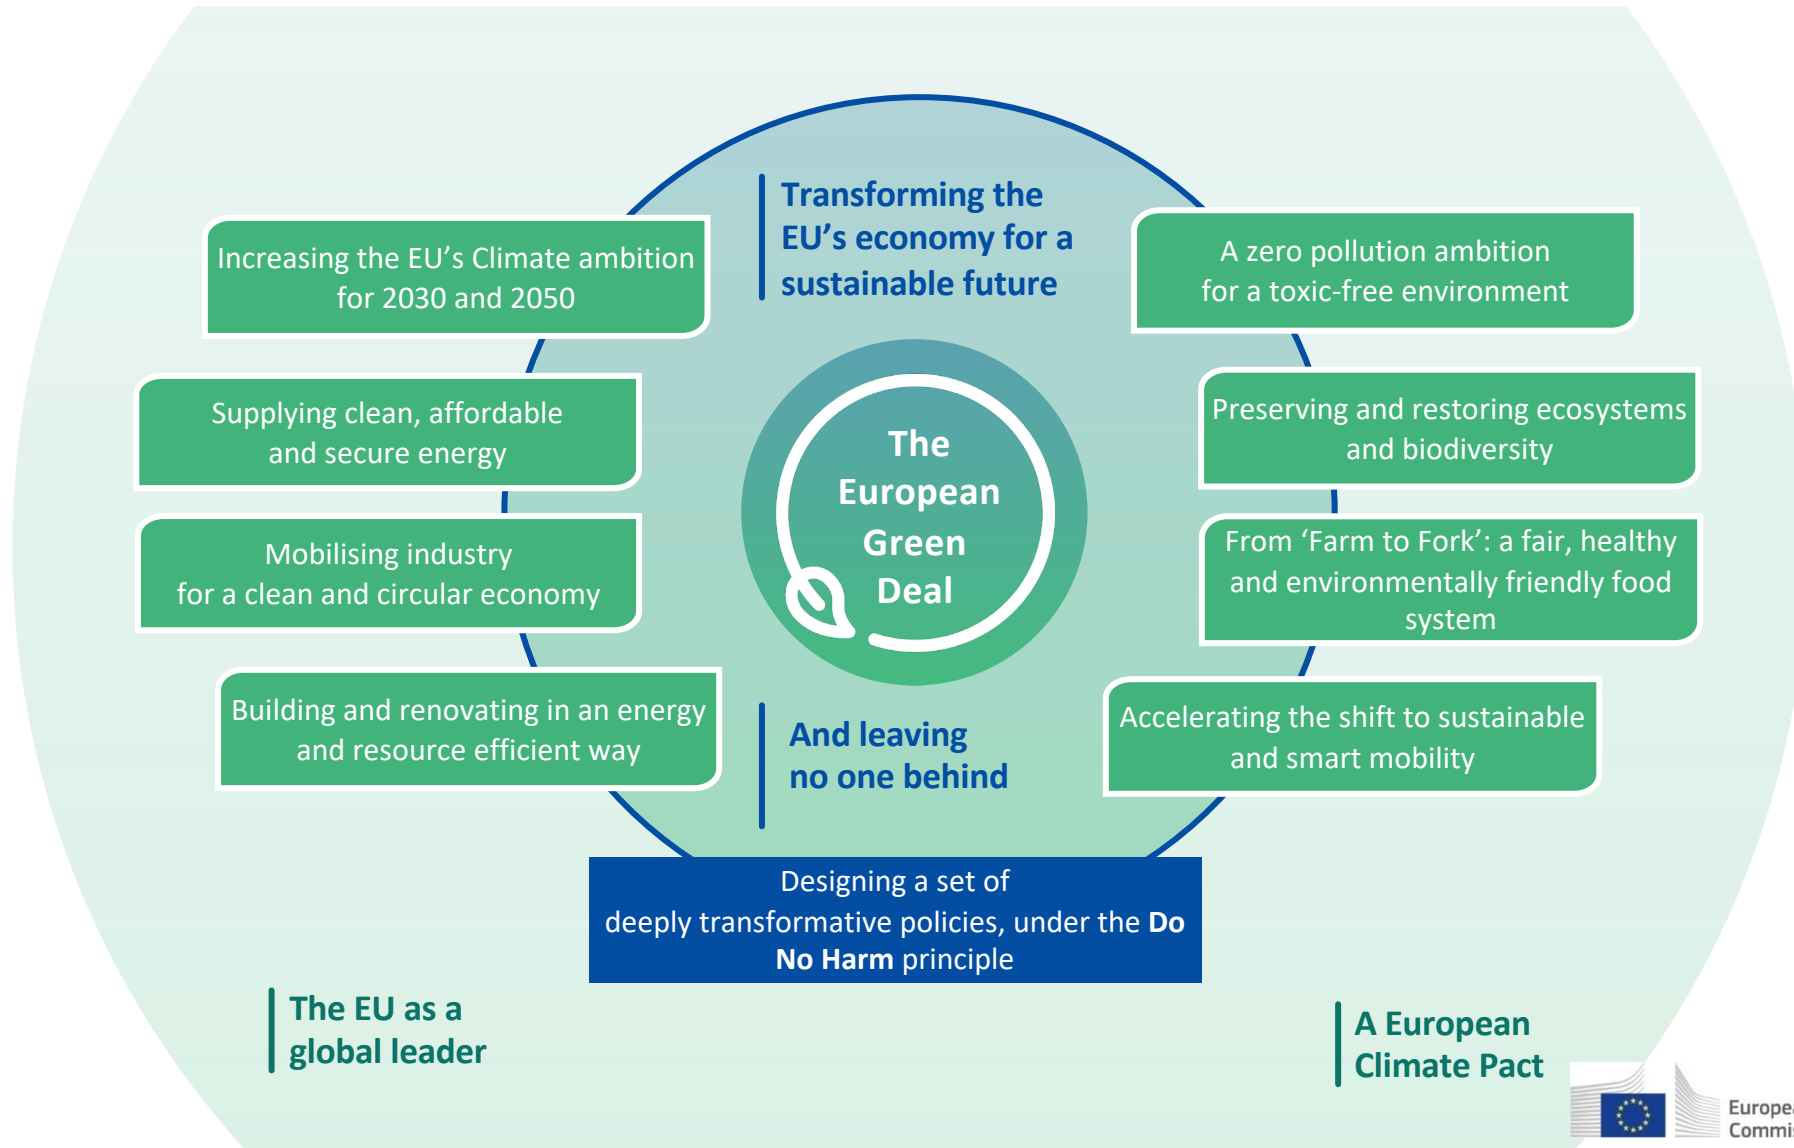

Barbara Bacigalupi  
European Commission, DG Environment

European Union

# The European Green Deal

# Governance - The 8<sup>th</sup> Environment Action Programme

A “deal” between all institutions making the EGD’s objectives legally binding

- 2021 – 2030 timeframe: a stable political framework to 2030
- A 2050 long-term vision: “wellbeing for all, within the planetary boundaries”, in line with the EGD’s climate neutrality objective
- 6 thematic priority objectives in line with the EGD
- Enablers to support implementation
- An overarching coherent environmental monitoring framework to assess and communicate progress towards the 2030 and 2050 objectives
- Decision on the 8<sup>th</sup> EAP to 2030 published in the Official Journal on 12 April : [EUR-Lex - 32022D0591 - EN - EUR-Lex \(europa.eu\)](#). Entry into force on 2 May

# Monitoring the 8EAP and the environmental policies

# Monitoring the 8<sup>th</sup> Environment Action Programme – principles

<b>Purpose:</b>	Impact/Outcome and link to 2030 target
<b>Focus:</b> including	Environment and Climate policy, pressures
<b>Narrative/key question:</b> <i>targets,</i>  <i>priority</i>	<i>In light of the 2050 vision and 2030 what is the progress towards the 6 objectives of the programme</i>
<b>Target audience:</b>	ENVI ministers & general public
<b>Granularity:</b> possible)	EU, MS, Regional, Local (where
<b>Reporting:</b>	Annual stocktake and more in-depth assessments mid-programme (2024) and end-programme (2029)

# Monitoring the 8<sup>th</sup> EAP – Timeline

Adoption of the proposal for the 8<sup>th</sup> EAP  
announcing the monitoring framework

Principles “Towards an 8<sup>th</sup>  
EAP monitoring framework”

Draft list of Indicators -  
Discussion in the Commission

Consultation of Member  
States and stakeholders

Trilogue and adoption of the 8<sup>th</sup> EAP

Revised version and  
adoption of the MF

Commission adoption of 8<sup>th</sup> EAP  
(October 2020)

Publication of the Principles and  
consultation (February 2021)

EKC, Commission services  
(Spring 2021)

Publication of the draft MF and  
launch of consultation

Member States workshop  
(September 2021)

Stakeholders workshop  
(October 2021)

Political agreement Dec. 2021  
Enter into force on 2 May 2022

Fine-tuning of the 8EAP MF  
after negotiations on the legal  
text are concluded

Commission adoption in 2022

# | The Environmental key policy priorities

## 1. [Circular economy action plan](#) (March 2020)

For a cleaner and more competitive Europe

- Focus on production, key value chains and waste prevention
- 35 actions, including the revision of the [monitoring framework](#)

## 2. [EU Biodiversity Strategy 2030](#) (May 2020)

Bringing nature back into our lives

- Ambitious EU targets and commitments for 2030 to achieve healthy and resilient ecosystems
- More than 100 actions, including a monitoring framework and a knowledge centre ([link to global Biodiversity monitoring](#))

## 3. [Zero-pollution action plan](#) (May 2021)

Towards zero pollution for air, water and soil

- Ambition: Air, water and soil pollution is reduced to levels not harmful to health and natural ecosystems and within planetary boundaries
- 33 actions, including [Zero Pollution Monitoring and Outlook Reports](#)

# A new Circular economy action plan

Make sustainable products the norm in the EU  
Empower consumers and public buyers  
Sustainable production processes

Electronics and ICT  
Batteries and vehicles  
Packaging  
Plastics  
Textiles  
Construction and buildings  
Food, water and nutrients

Reduce Waste  
Reduce Waste Exports  
Boost market for high quality and safe secondary raw materials

**Making circular economy work for people, regions and cities**

**Circular economy as a requisite for climate neutrality**

**Getting the Economics Right**

**Financial Markets**

**Investments and R&I**

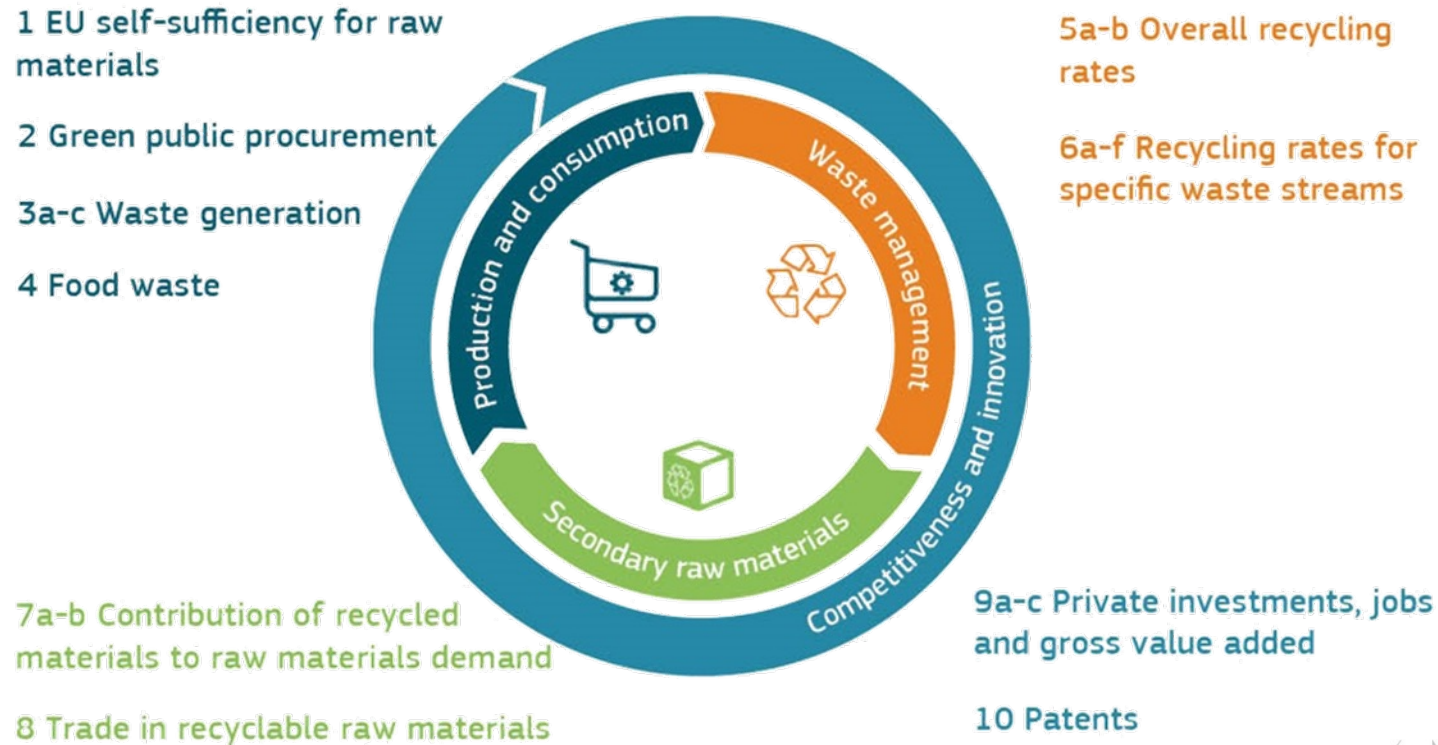

**Global Level Playing Field**

**Monitoring**

# Monitoring progress towards Circular economy

## EU Monitoring framework for the Circular economy

# A new Monitoring tool for Circular economy

## Current approach

- **10** individual indicators
- In **4** main groups
  - production/consumption;
  - waste management;
  - secondary raw materials,
  - competitiveness/innovation
- Covering the **entire loop**
- Capturing **main** CE elements
- Also presented on a [website](#), continuously updated

## New approach

- **12** individual indicators
- In **5** main groups
  - production/consumption;
  - waste management;
  - secondary raw materials;
  - competitiveness and innovation;
  - global sustainability and resilience
- Covering the **entire loop**, more balance
- **Holistic view**
- **Website**

# The EU Biodiversity Strategy

## 2030

Ensure that by 2030, Europe's biodiversity will be on a path to recovery for the benefit of people, the planet, the climate and our economy

Protect Nature

Enable Transformative Change

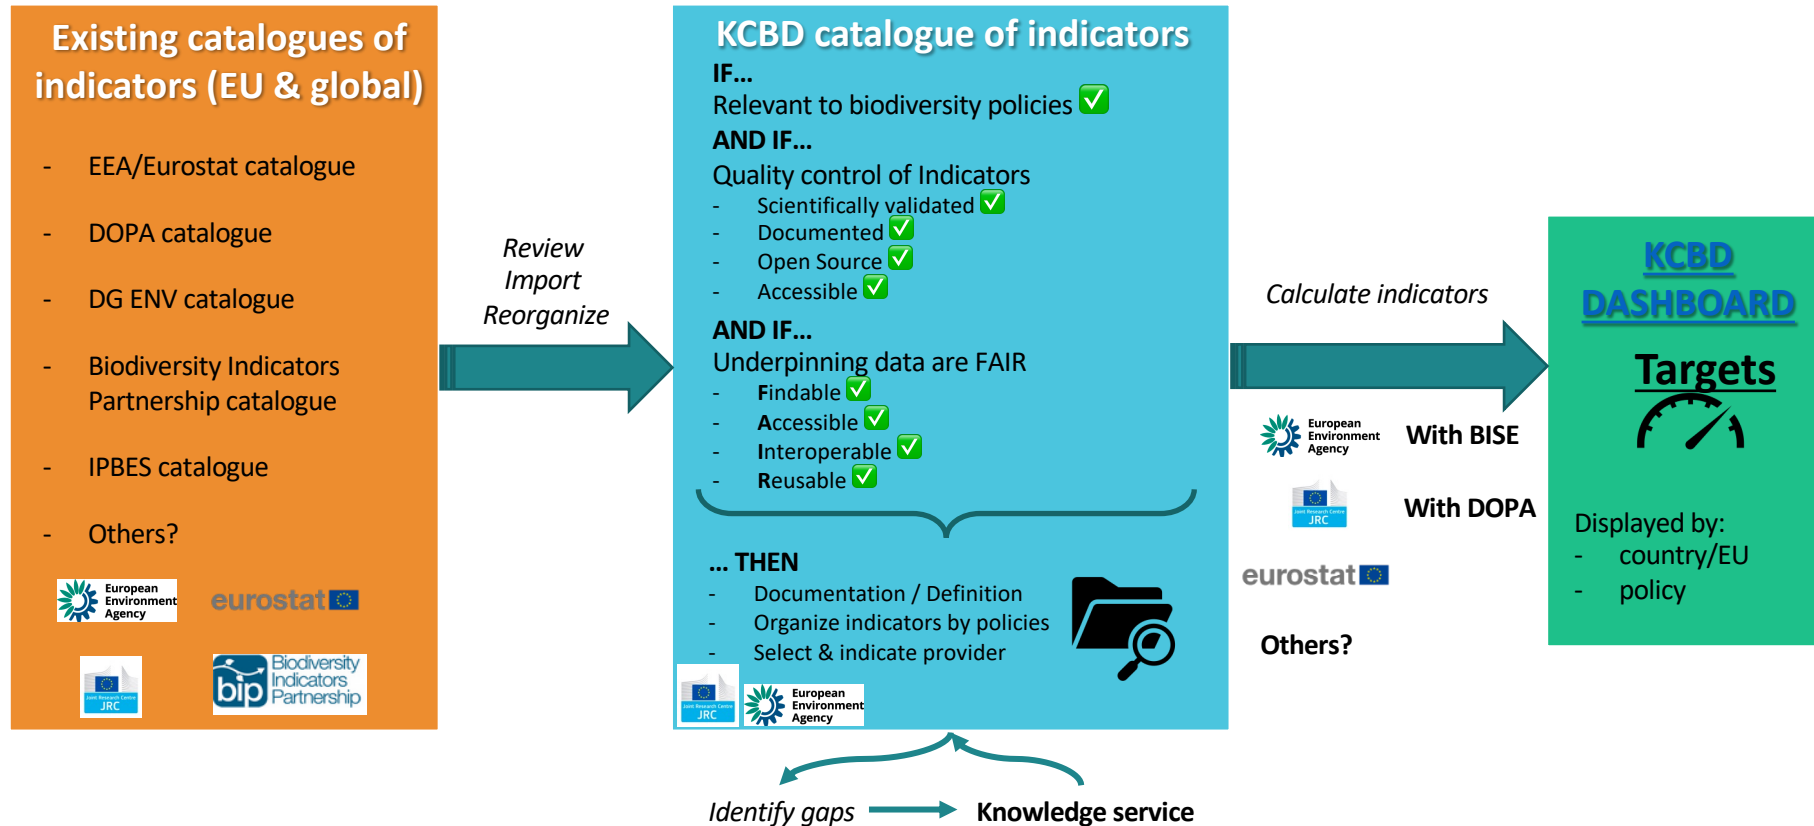

Restore Nature

EU For An Ambitious Global Agenda

# Monitoring progress towards Biodiversity targets

# A **Zero Pollution** ambition for a toxic-free environment

## The response

### The Zero Pollution Action Plan

**The zero pollution vision for 2050:** Air, water and soil pollution is reduced to levels no longer harmful to health and natural ecosystems thus creating a toxic free environment.

Prevent and reduce pollution to waters and oceans and facilitate remediation

Prevent and reduce air and noise pollution

Prevent and reduce soil pollution and facilitate remediation

# | Zero pollution – Monitoring and Outlook

- **Integrated Monitoring and Outlook framework to be developed as much as possible on the basis of existing indicators, see details in [SWD\(2021\) 141](#) (including proposed indicators in the Annexes)**
- **First report prepared for end 2022 – second report in 2024**
- **Shortcomings in terms of thematic (e.g. soil and chemicals) and time coverage (e.g. frequency of data)**
- **Closely coordinated and integral part of 8<sup>th</sup> EAP, SDGs and other frameworks including pollution-relevant indicators**
- **Proposed indicators mainly linked to zero pollution targets (not all are under ‘zero pollution’ heading and some are under development)**

Thank you for your attention!

# Defining purpose and level of detail

Tiered/layered approach building on one another. Stories across the levels are coherent.

# Simplified structure for 2022 report

# Key questions

## Monitoring:

- What is the progress regards the ZP targets?
- What is the progress on key indicators which cover the most important pollution dimension?
- What else do we know about pollution, e.g. emerging issues or evidence not based on indicators?
- What is the combined impact on health and biodiversity or the combined pollution from all pollution sources? (link to action areas)

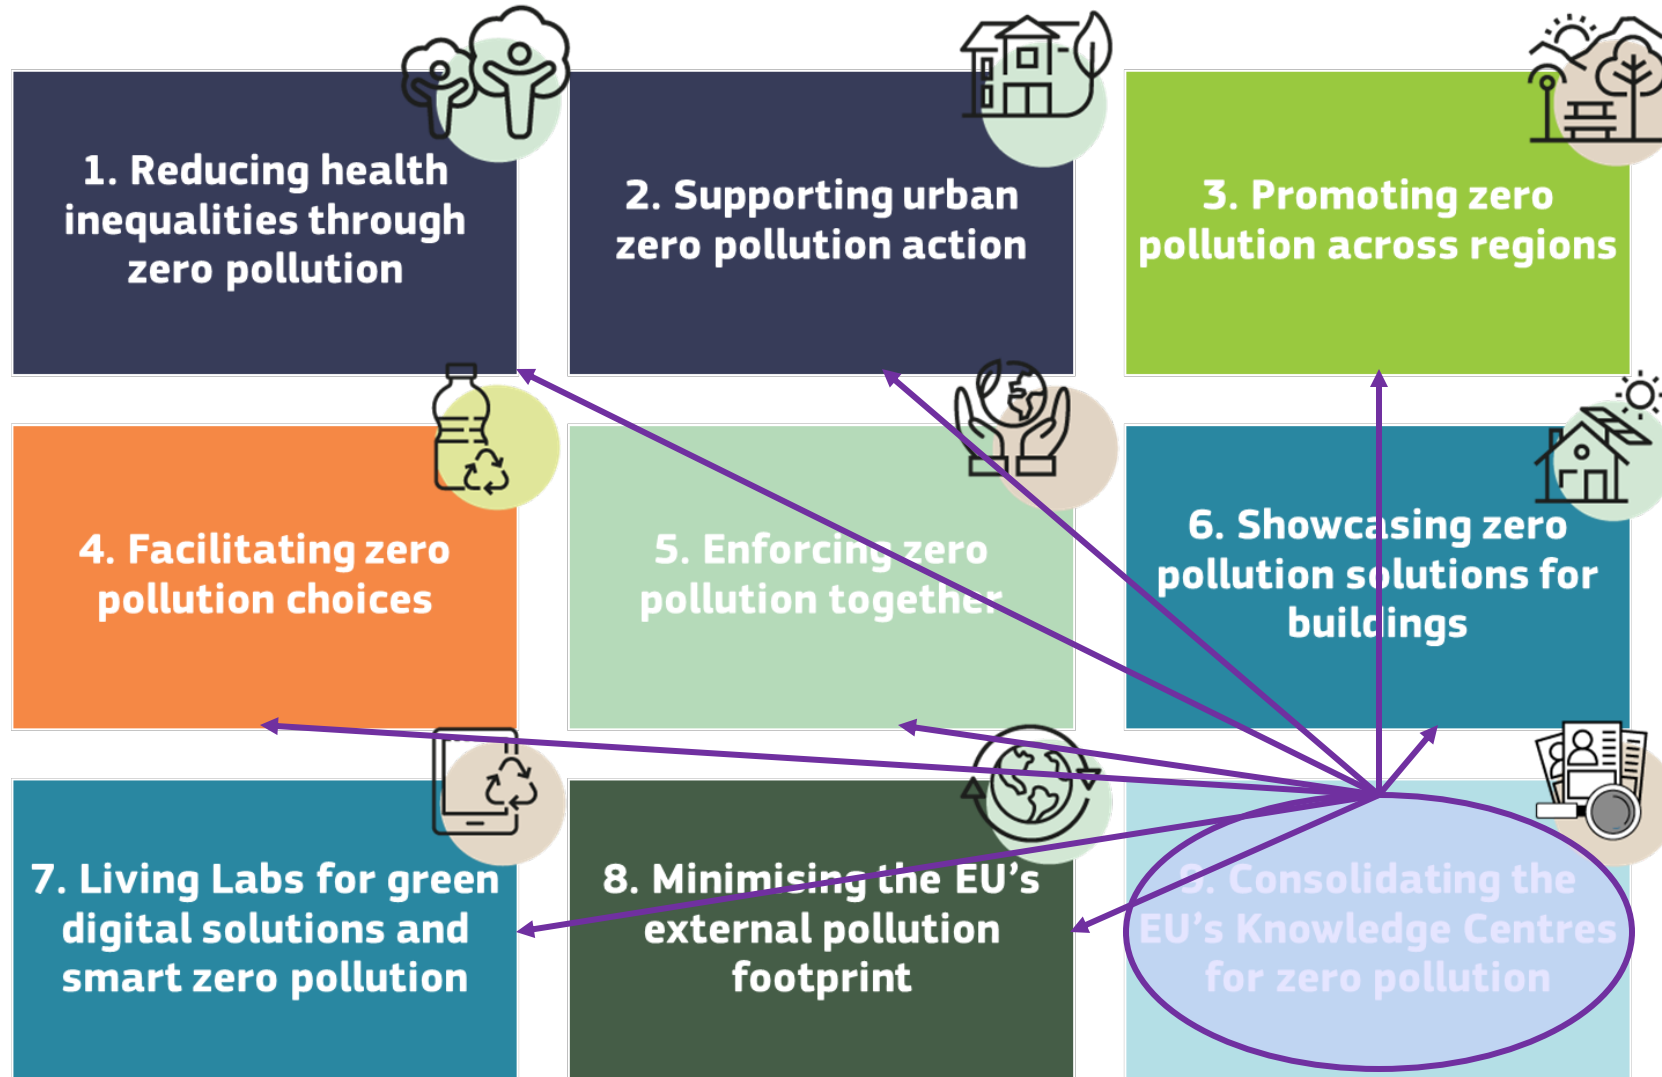

## Outlook:

- Will we achieve the ZP targets in 2030 based on the agreed and planned measures?
- What is the wider perspective for 2030 / 2050 for achieving the zero pollution ambition?

What can we improve in order to strengthen the evidence base?

# Integral part of ZP flagships

# Next steps

**May/June 2022:** Stakeholder Consultation

**July-Oct 2022:** Preparation of the 'Report'

**Nov/Dec 2022:** 1st Zero Pollution Monitoring and Outlook Report

**14 December 2022 (tbc):** Zero Pollution Stakeholder Conference

**During 2023:** discussion and further development of Report

**1st Semester 2024:** 2nd Zero Pollution Monitoring and Outlook Report

# The Chemicals Strategy for Sustainability

Develop a framework of indicators to monitor:

- The **drivers** of chemicals pollution
- The **impacts** of chemicals pollution
- And measure the **effectiveness** of chemicals legislation

by 2024

# The goals of the Chemicals Strategy in a nutshell

	CSS objective
Prevention	Promote <b>safe-and-sustainable-by-design chemicals</b> , materials and products and clean production processes
Prevention	<b>Substitute</b> substances of concern as much as possible
Prevention	<b>Avoid most harmful substances</b> in consumer products and professional uses unless they are essential for society (c.f. the ongoing development of criteria for essentiality)
Prevention	<b>Reduce consumption of resources</b>
Prevention	Promote <b>innovative tools for testing</b> (e.g. non-animal test) and risk assessment
Control/minimise	Develop <b>modern business models</b> and smart solutions for safe and sustainable use of chemicals
Control/minimise	Ensure the development of <b>digital solutions</b> for tracking of chemicals and to ensure full information to users of chemicals
Control/minimise	<b>Step up risk management measures</b> for hazardous chemicals on the EU market (incl. from imports)
Remediate/eliminate	<b>Eliminate</b> as far as possible <b>substances of concern from waste</b> and secondary raw materials
Remediate/eliminate	<b>Restore health and environment</b> to a good quality status
Remediate/eliminate	Promote <b>safe and clean recycling</b> and waste management solutions
Remediate/eliminate	Step up <b>decontamination techniques</b>

# Version 1 of the framework: candidate indicators

## Areas of candidate indicators

- 1: Production and Consumption of chemicals
- 2: Safe and Sustainable by Design
- 3: Consumption footprint, chemicals in products and in the Circular Economy
- 4: Pesticides, biocides, antimicrobial resistance and pharmaceuticals
- 5: Environmental and human (bio)monitoring
- 6: Additional ad-hoc indicator candidates: this includes indicators on enforcement activities, animal testing and research

During 2022, validation of candidate indicators is taking place. At the moment areas 2 and 3 are the least developed.

# List of candidate indicators (32 - with sub-indicators)

## Target availability by 2024

TS		Indicator name	Data provider	2022	2024
TS1	Chemicals production and consumption	Number of substances identified as Substances of Concern	ECHA	x	
		Volume of SOC produced in and imported into the EU	ECHA		x
		Production and consumption of chemicals	ESTAT	x	
		Share of substances in need for regulatory action (assessed or initiated)	ECHA	x	
		Substances of concern with declared uses in REACH dossiers	ECHA		x
		Share of carcinogens registered for product categories	ECHA		x
		Substances of concern in down-the-drain consumer products	ECHA		x
TS4	Pesticides, Biocides, Pharma, AMR	Pesticides/Chemical plant protection products	ESTAT	x	
		Antimicrobials, resistance (human/vet) and biocides	EMA	x	
		Anthropogenic chemicals in food and feed	(EFSA)		x
		Chemical pollutants in drinking water and ground water	(EEA)		x
		Pharmaceuticals sales (still to be discussed)	EMA	x	

TS		Indicator name	Data provider	2022	2024
TS5	Environmental and human (bio)monitoring	Industrial Pollution Intensity	EEA	x	
		Emissions to Water from Urban Waste Water Treatment	EEA	x	
		Surface water chemical pollutants and risk	EEA	x	
		Contaminated sites	EEA	x	
		LUCAS Soil indicators of metals, antibiotics and pesticides	JRC		x
		Hazardous substances in the marine environment	EEA	x	
		Chemicals effect on climate change and the ozone layer	(EEA/TBD)	x	
		Chemicals in humans and their risk	EEA/OSHA	x	
TSx	Other (ad-hoc)	Enforcement indicators for REACH and CLP	DG GROW	x	
		Safety Gate – RAPEX notifications and reactions	DG JUST	x	
		Animal use in science	JRC	x	

## Later availability, 2024+

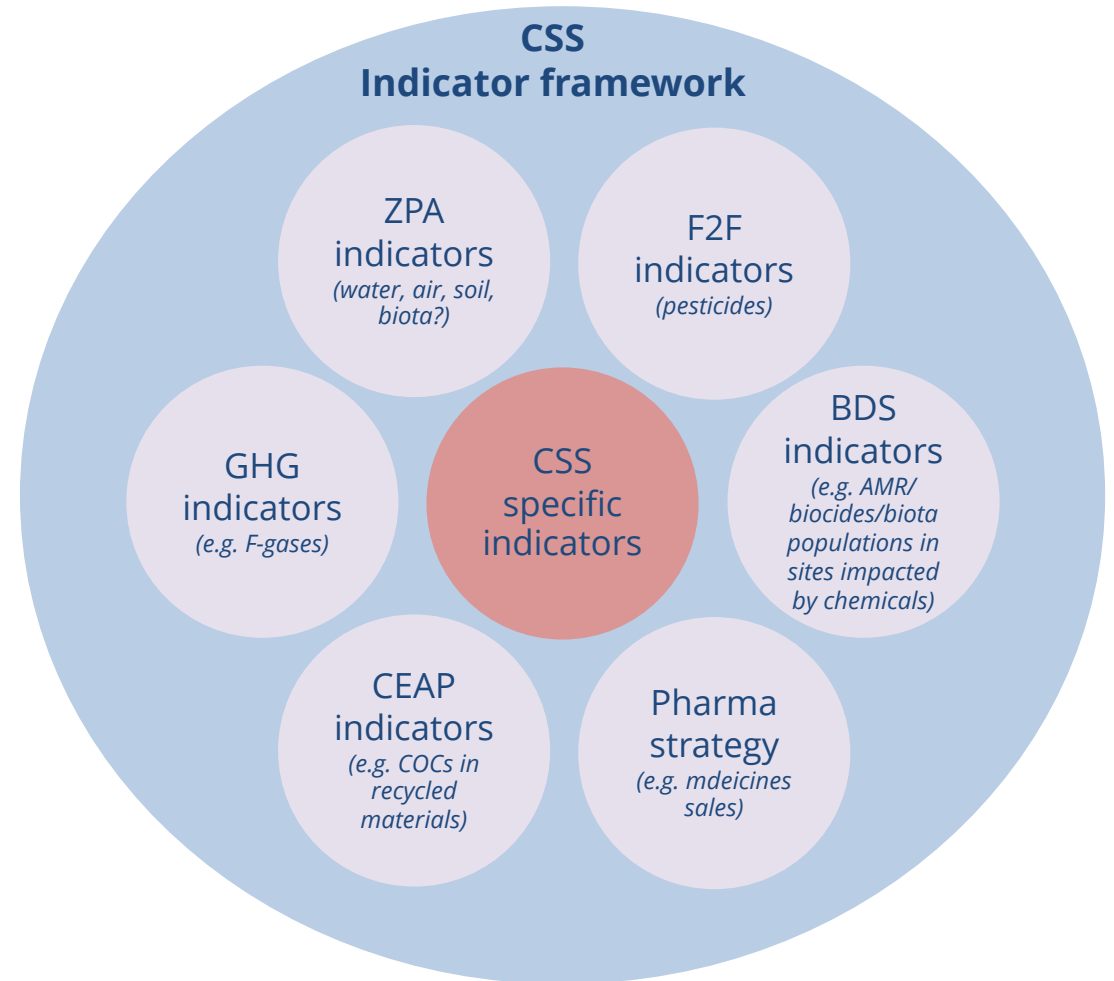

TS		Indicator name	Data provider
TS1	Chemicals production and consumption	Substances of concern assessed for developmental immuno-, endocrine- and neuro-toxicity in regulations	ECHA
TS2	Safe and sustainable by design chemicals (SSBD)	Placeholder for a set of Safe and Sustainable by Design indicators	DG RTD
TS3	Product, footprint and circular economy	Substances of Very High Concern in articles	ECHA
TS3		Consumption footprint	JRC
TS3		Domestic footprint	JRC
TS4	Pesticides, Biocides, Pharma, AMR	POPs and heavy metals air pollution (to be discussed)	(EEA)
TS5	Environmental and human (bio)monitoring	Monitoring and assessing Indoor Pollution in the EU Building Stock	JRC
TS5		Impacts of chemicals on Human Health	EEA
TSx	Other (ad-hoc)	Research and Innovation on chemicals	DG RTD/ENV

# Interface with indicators from other strategies

## Harvesting of indicators from other domains

## Alignment with messaging/reporting from other policies

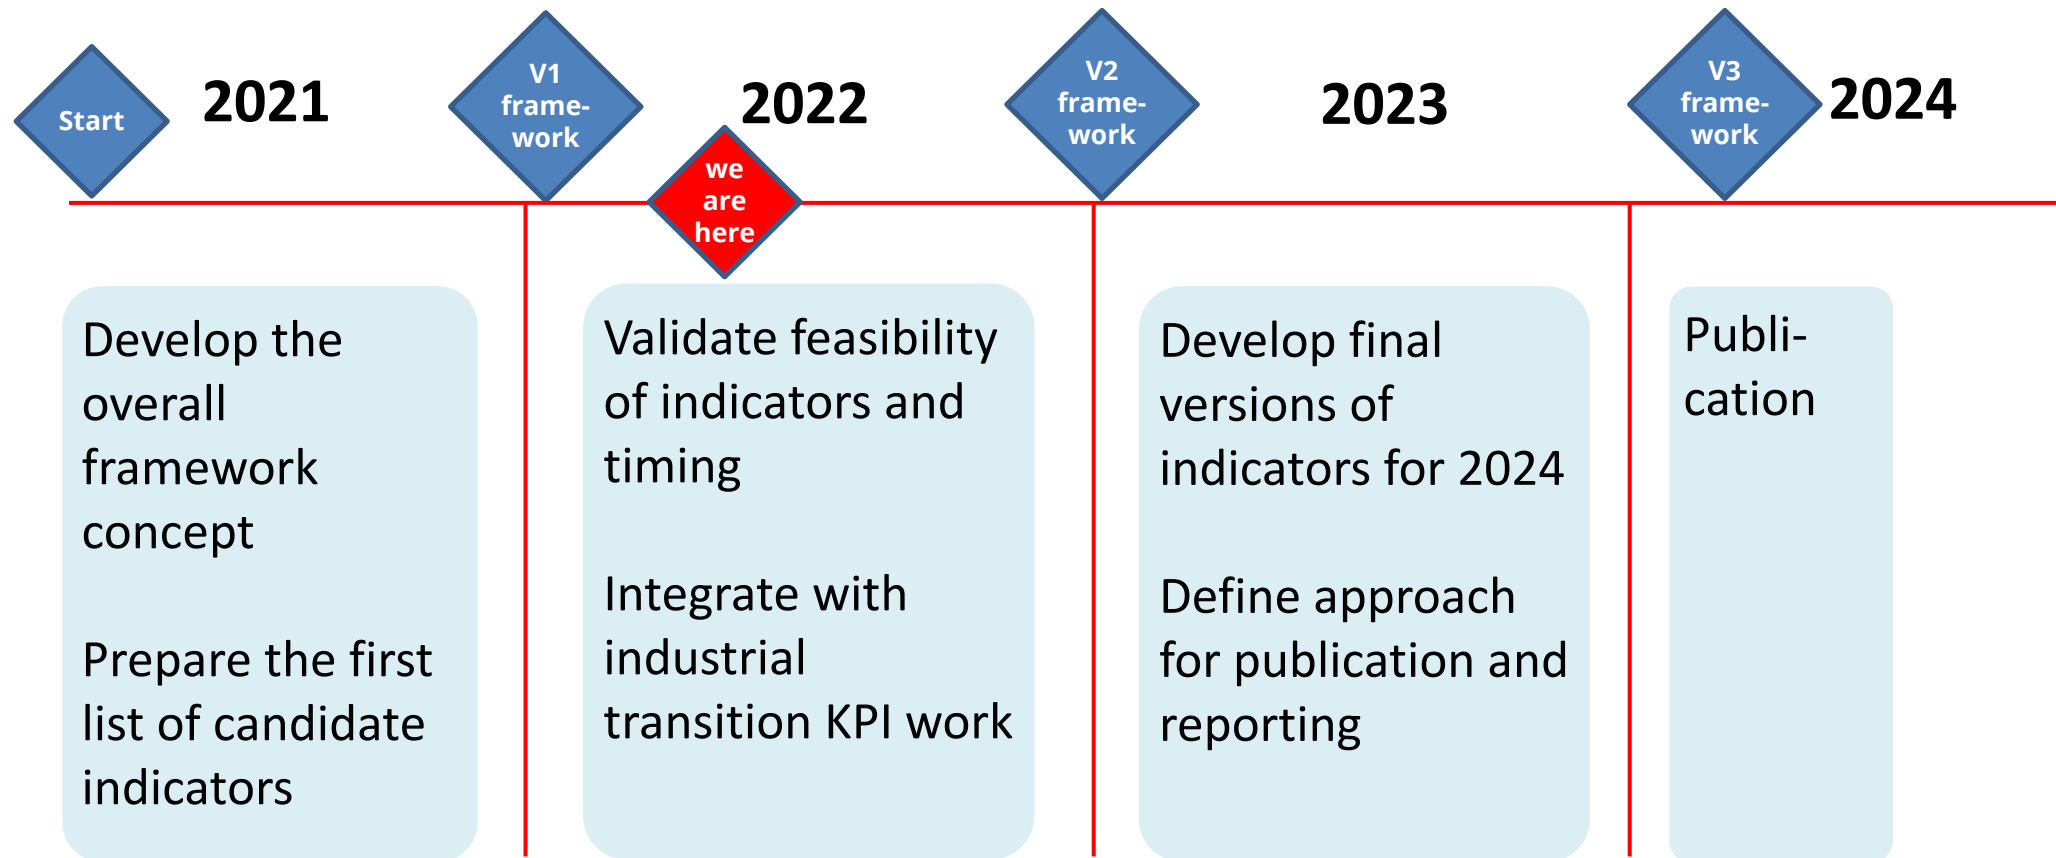

# Expectation from Zero Pollution towards CSS indicators

code	Indicator name	Single indicator	TS	Year of first availability	Included in ZP Indicator Set?
TS4-1	<b>Chemical pesticides sales and risks</b>	2	TS4	2022	Yes
	A. Use and risk of chemical plant protection products	-	TS4	2022	
	B. Use of the more hazardous plant protection products	-	TS4	2022	
TS4-2	<b>Antimicrobials, resistance (human/vet) and biocides</b>	>3	TS4	2022	Uncertain
	A. Consumption of antimicrobials in food producing animals	-	TS4	2022	
	B. Antibiotic consumption in humans	-	TS4	2022	
	C. AM resistance- vet (EFSA) and human (ECDC)	-	TS4	tbc	
	D. Biocides	-	TS4	tbc	
TS4-3	<b>Placeholder (draft) for anthropogenic chemicals in food and feed</b>	2	TS4	tbc	Yes
	A. Food contaminants (to be discussed)	-	TS4	tbc	
	B. Pesticide and Veterinary drug residues (to be discussed)	-	TS4	tbc	
TS4-4	<b>Chemical pollutants in drinking water and ground water</b>	2	TS4	2024	Yes
	A. Chemical pollutants in drinking water	-	TS4	2024	
	B. Chemical pollutants in ground water	-	TS4	2024	
TS4-10	<b>Pharmaceuticals sales (still to be discussed)</b>	2	TS4	2024	No
	A. Sales of veterinary pharmaceuticals in the EU	-	TS4	2024	
	B. Sales of human pharmaceuticals in the EU (to be discussed)	-	TS4	tbc	
TS5-1	<b>Industrial Pollution Intensity</b>	2	TS5	2022	Yes
	A. Industrial emissions	-	TS5	2022	
	B. Industrial production	-	TS5	2024	
TS5-2	<b>Emissions to Water from Urban Waste Water Treatment</b>	2	TS5	2022	Yes
	A. Treatment level of waste water	-	TS5	2022	
	B. Wastewater pollutants	-	TS5	2024+	

- Chemicals is a key element of ZP monitoring and outlook assessments
- A number of candidate CSS indicators also included within ZP Monitoring indicator set.
- Mainly Environmental and human biomonitoring indicators
- CSS will provide greater depth of information/assessment

# Current status and next steps

# Thank you

# Session 2: Zero Pollution Monitoring

Presentations from EEA, JRC, UNEP and GAHP

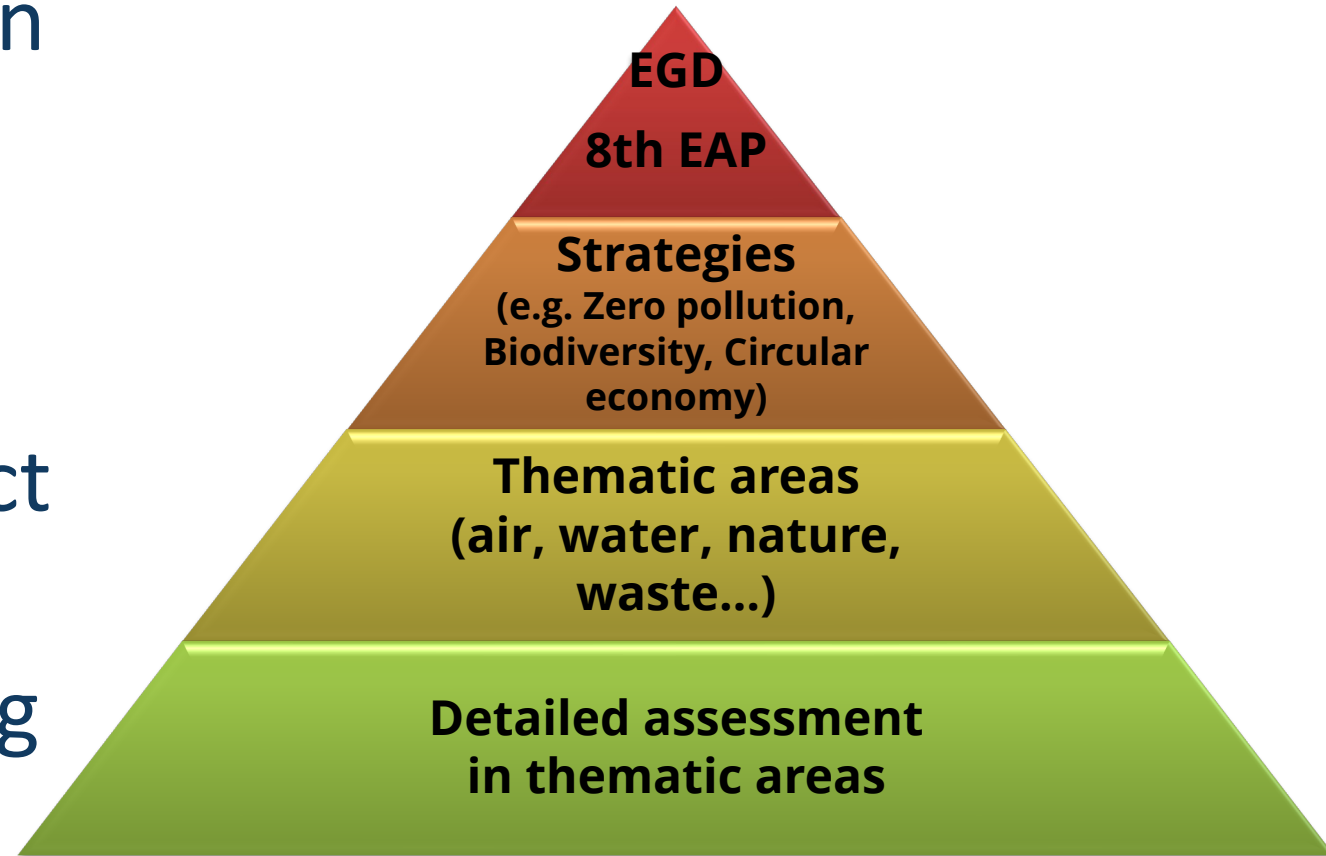

# EEA - Zero Pollution Action Plan

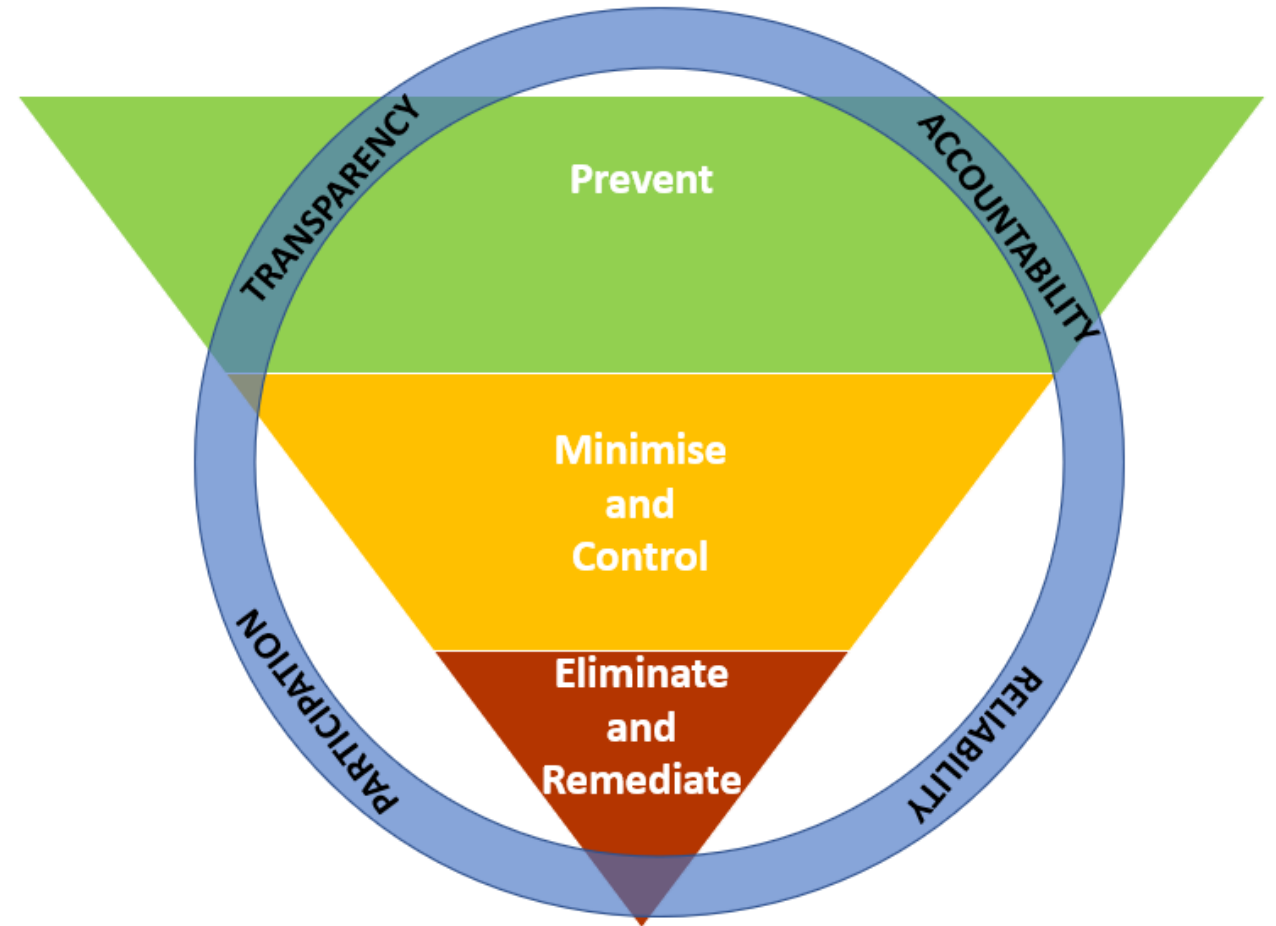

# Objectives of the Zero Pollution Action Plan?

“Air, water and soil pollution is reduced to levels no longer considered harmful to health and natural ecosystems and that respect the boundaries our planet can cope with, thus creating a toxic-free environment.”

# Zero Pollution Hierarchy & Key Elements

- Integrated approach to addressing environmental issues
- Knowledge based actions and policies
- Addressing inequalities
- Use of digitalisation

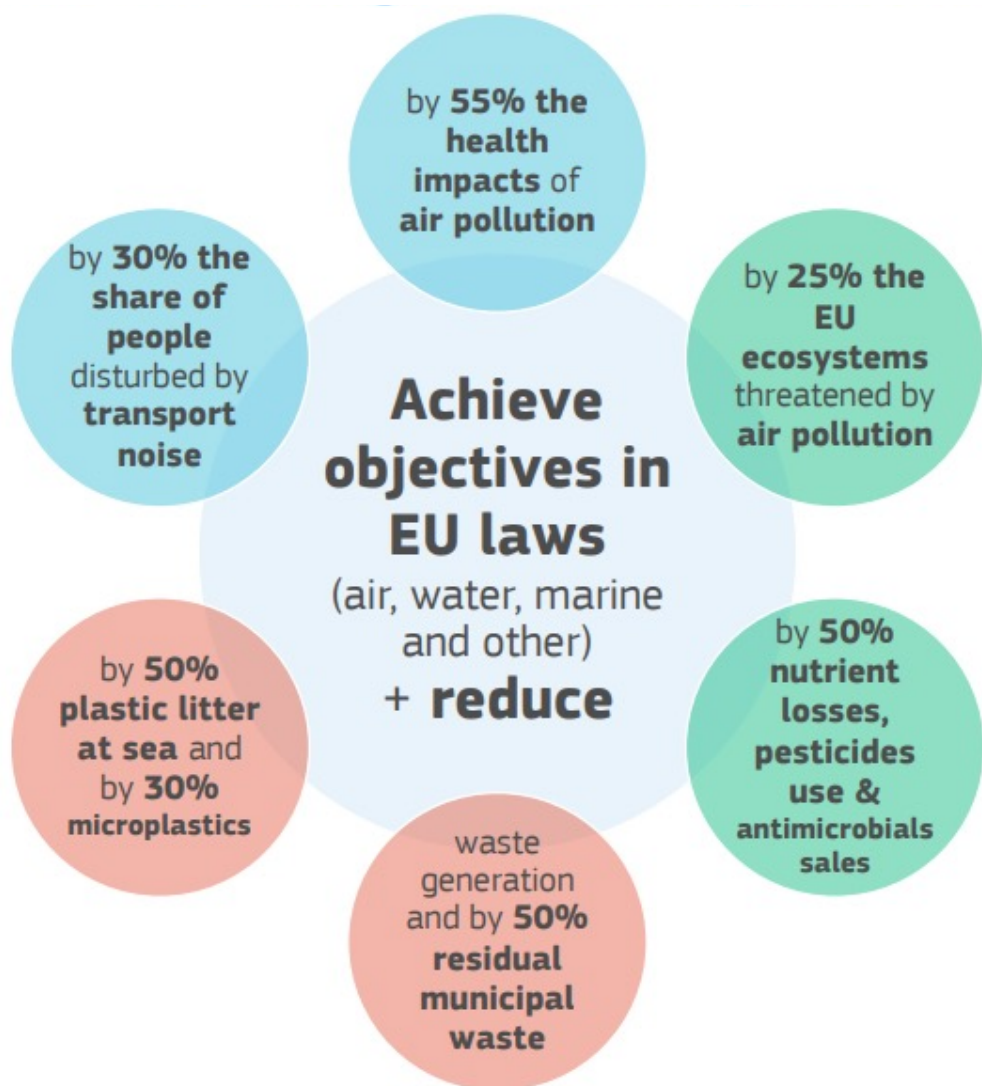

# EEA Role: Assessing Progress - Monitoring & Outlook

# 2030 ZP Interim Targets

Achieve ZP  
Ambition  
by 2050

# ZP Monitoring Assessment (ZPMA) Objectives

- A knowledge system driving ZP ambition
- A tool to measure progress of the ZPA
- A driver for change towards better monitoring
- What are trends, state & distance to target (policy target or ZP target)?
- What are the challenges?
- What are the knowledge gaps?

# How will we assess progress?

## Indicators

### Health impacts of exposure to fine particulate matter in Europe

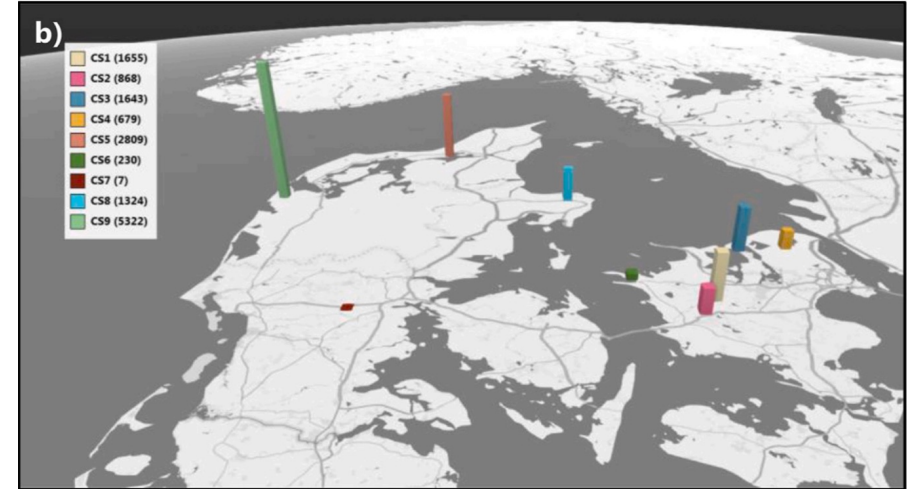

The EU's zero pollution action plan aims to reduce the number of premature deaths caused by fine particulate matter (PM<sub>2.5</sub>) by at least 55% by 2030, from 2005 levels. Between 2005 and 2019, the number of premature deaths in the EU attributed to PM<sub>2.5</sub> fell by 33%. If the number of premature deaths continues to fall at this rate, the 55% target will be achieved by 2032 at EU level. In 2019, as in previous years, the highest numbers of deaths per inhabitant were reported in Balkan regions, where solid fuel burning causes high PM<sub>2.5</sub> levels, and the lowest numbers in Scandinavian regions, where PM<sub>2.5</sub> levels are lower.

Published: 14 Dec 2021 14:50 – 25min read

# Signals: Consumption

## Consumption Signals

Consumption Signal 1: Impacts of EU consumption – safe operating space

Consumption Signal 2: Novel entities and planetary boundaries

ZP &  
Production/Consumption

Subtopics – resource  
extraction;  
production; use;  
waste.

Figure ES.1 Overview of European performance for three planetary boundaries

# Indicators: Waste

## Waste

Waste generation and decoupling (EEA Indicator)

Quantity of residual municipal waste generated (EEA Briefing)

Diversion of waste from landfill (EEA Indicator)

Landfills – indexed air emissions for selected pollutants

Incineration – indexed air emissions for selected pollutants

ZP &  
Production/Consumption

Subtopics – resource  
extraction;  
production; use;  
waste.

# Signals: Waste

## Waste Signals

Waste Signal 1: Prevention of plastic waste in Europe

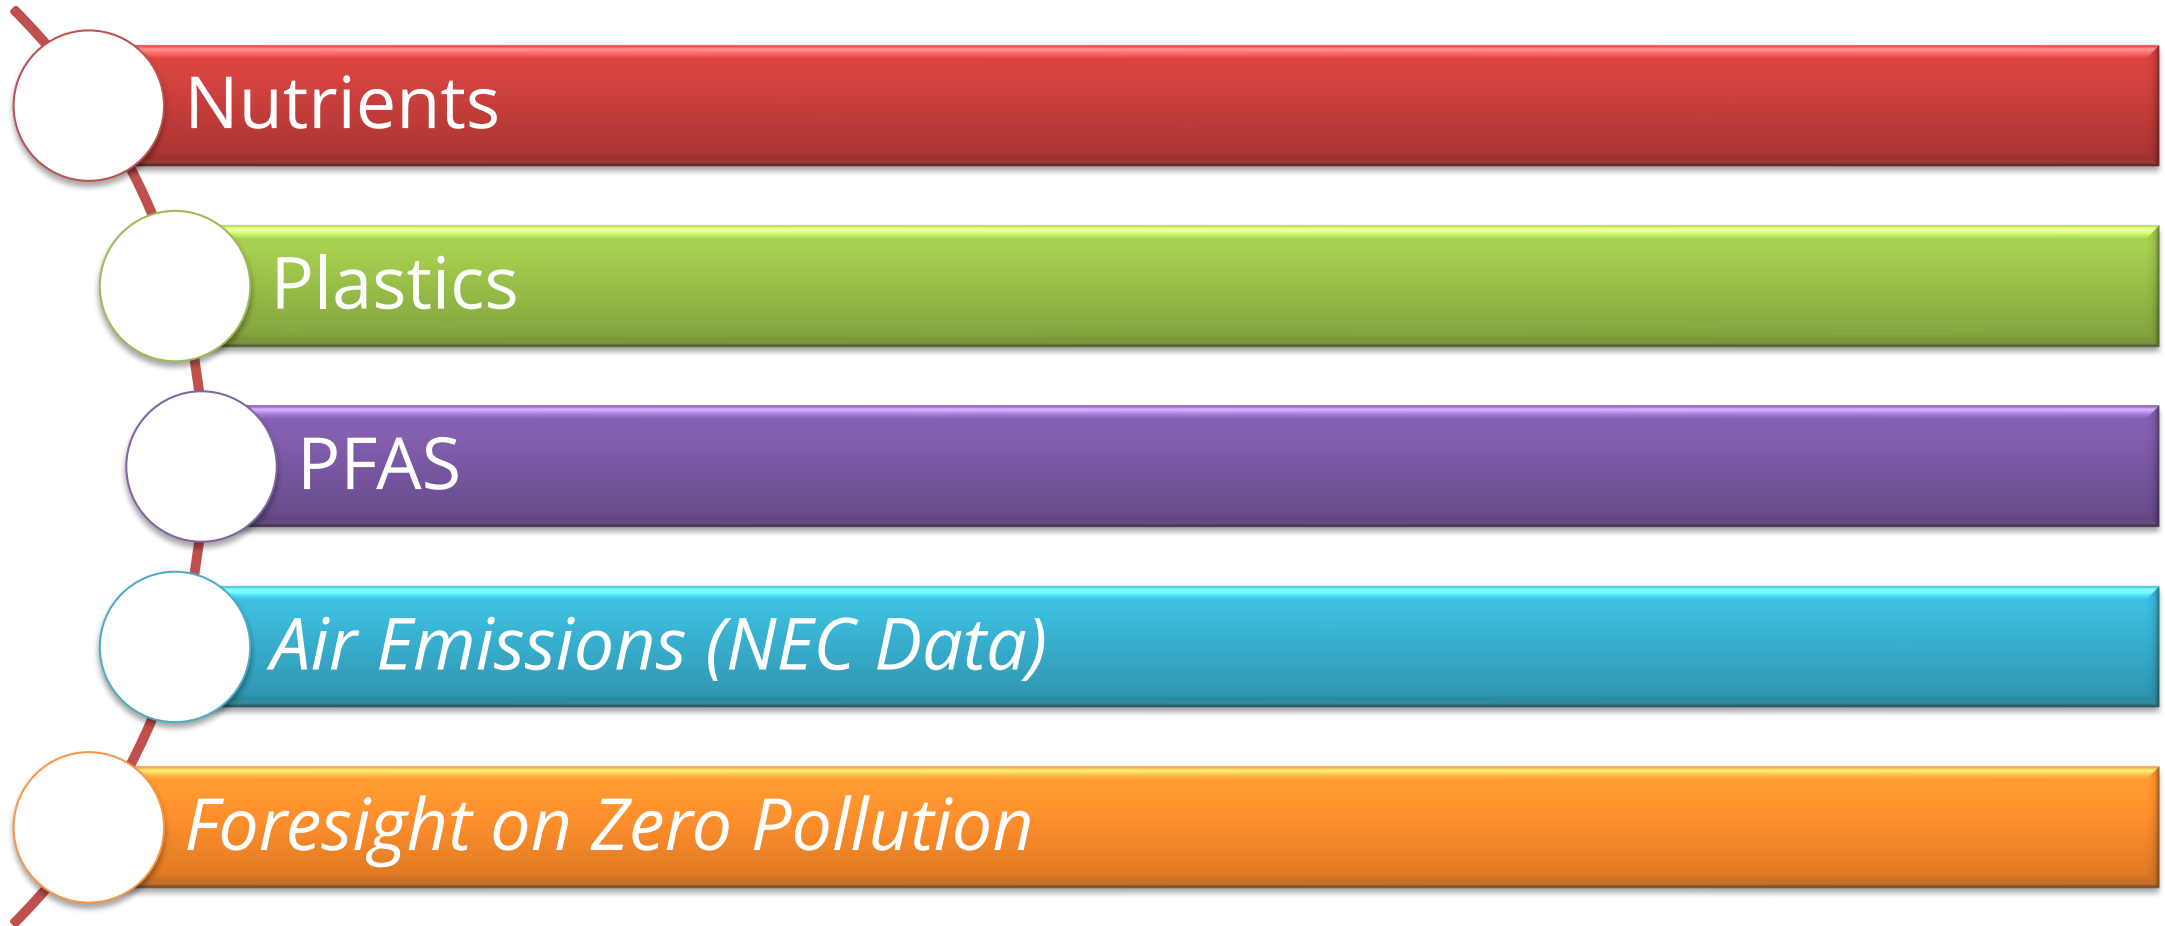

Waste Signal 2: Industrial symbiosis as a way to reduce waste generation

ZP &  
Production/Consumption

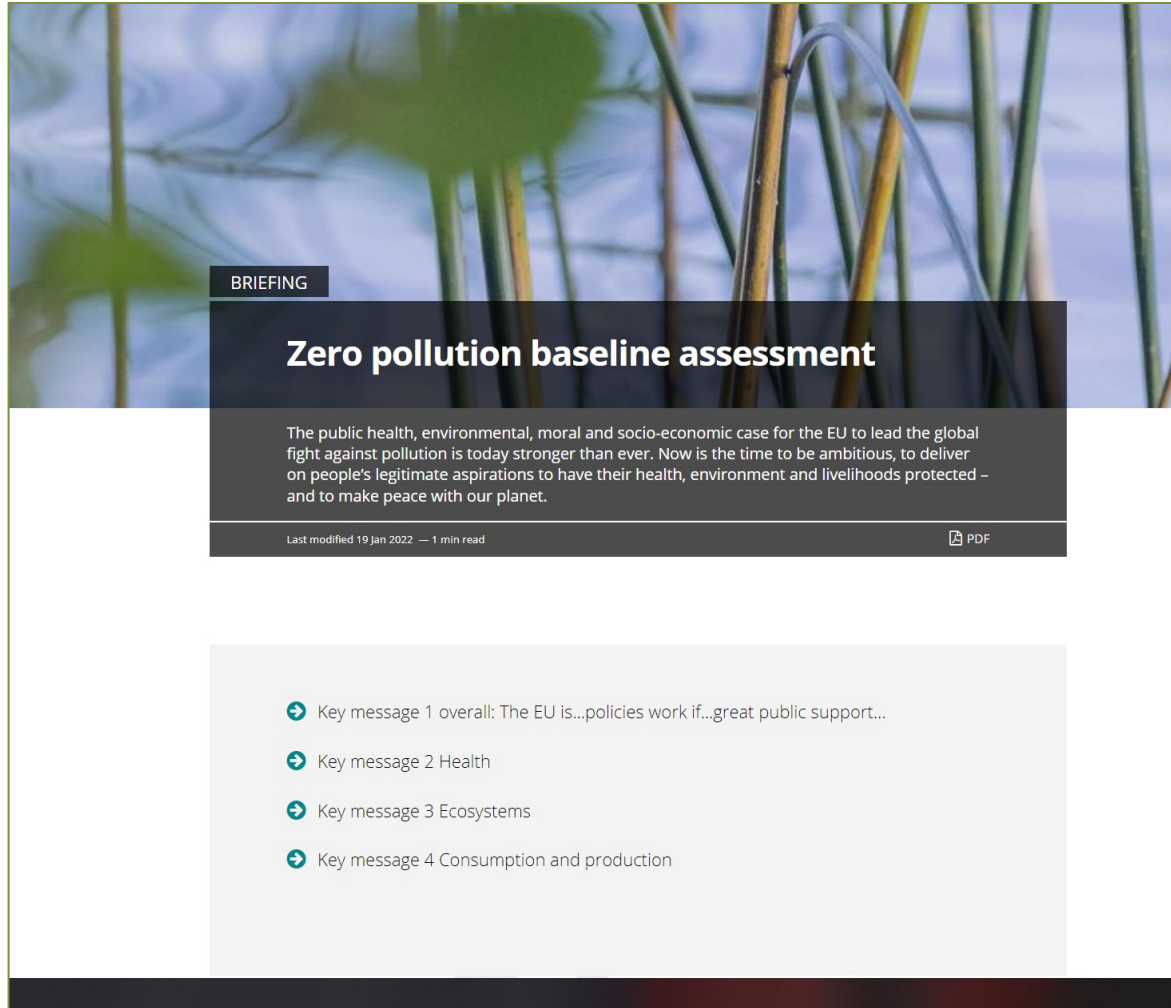

Subtopics – resource  
extraction;  
production; use;  
waste.

# ZP Cross-Cutting Stories

# What will we deliver?

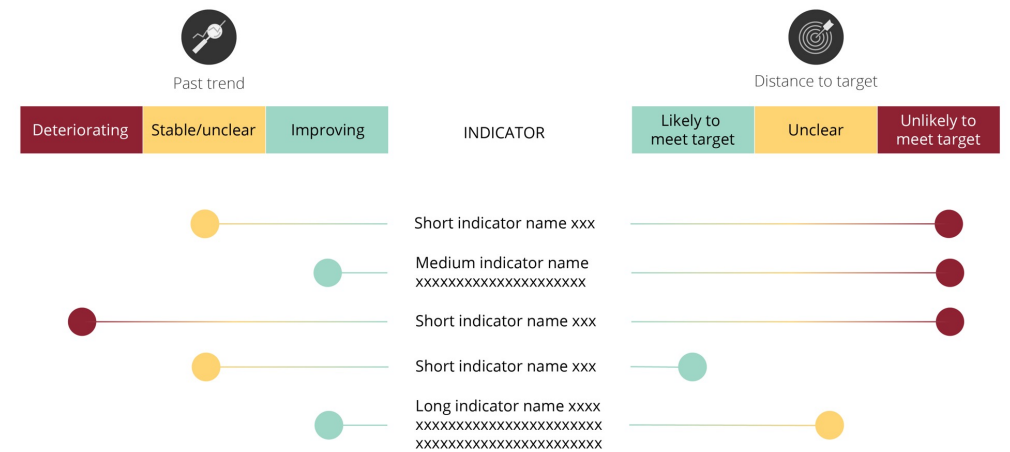

**BRIEFING**

## Zero pollution baseline assessment

The public health, environmental, moral and socio-economic case for the EU to lead the global fight against pollution is today stronger than ever. Now is the time to be ambitious, to deliver on people's legitimate aspirations to have their health, environment and livelihoods protected – and to make peace with our planet.

# Overview of Timeline

June/July 2022

- Draft ZP monitoring assessment ready for consultation

Summer 2022

- Update to any indicators finalised since July 2022 and inclusion in updated draft

Autumn 2022

- Finalise and publish EEA Zero Pollution Monitoring Assessment

~ June 2024

- Second EEA Zero Pollution Monitoring Assessment

Questions?

| 24 May 2022 | [www.eea.europa.eu](http://www.eea.europa.eu)

# Zero Pollution Monitoring and Outlook

## Soil Monitoring

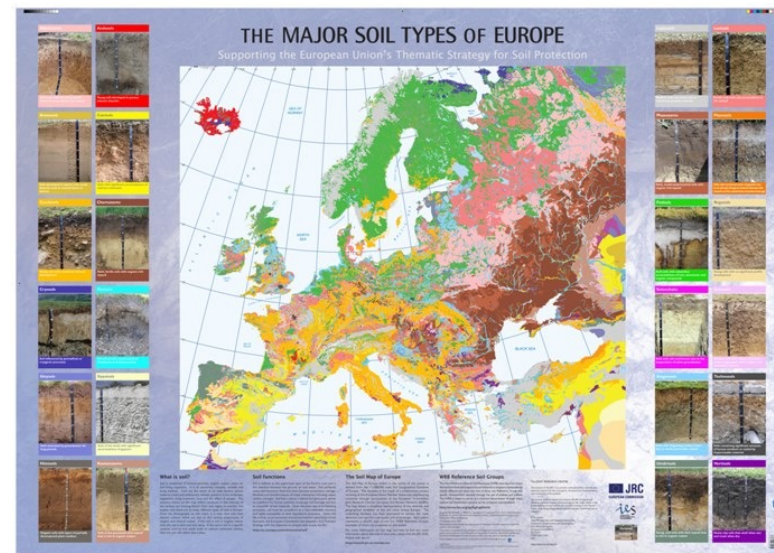

EC JRC Soil Team  
EEA + TC Land

ZP Workshop, 24-25 May 2022

# Soil and pollution

- Complex biological-geological media
- Constant exchanges between Liquid-Gasous-Soild phases within and from soil = water/air pollution!
- Underpins a broad range of ecosystem services
  - Food & feed production
  - Water regulation
  - Buffers and transforms pollutants
- Highly variable geographically
- Generally not on people's radar!

*John A. Kelley, USDA Natural Resources Conservation Service*

# Soil Pollution

Diffuse

Local / Point

# Consequences of soil pollution

Ingestion, dermal contact, inhalation, ecosystem services

# Assessing and monitoring soil pollution

Soils difficult to assess (compared to air and water)

**Laboratory analysis based on a physical sample collected from the field.**

## Modelling

- Atmospheric deposition
- Exceedance of critical loads

Some pollutants naturally found in soils (e.g. metals linked to geology)

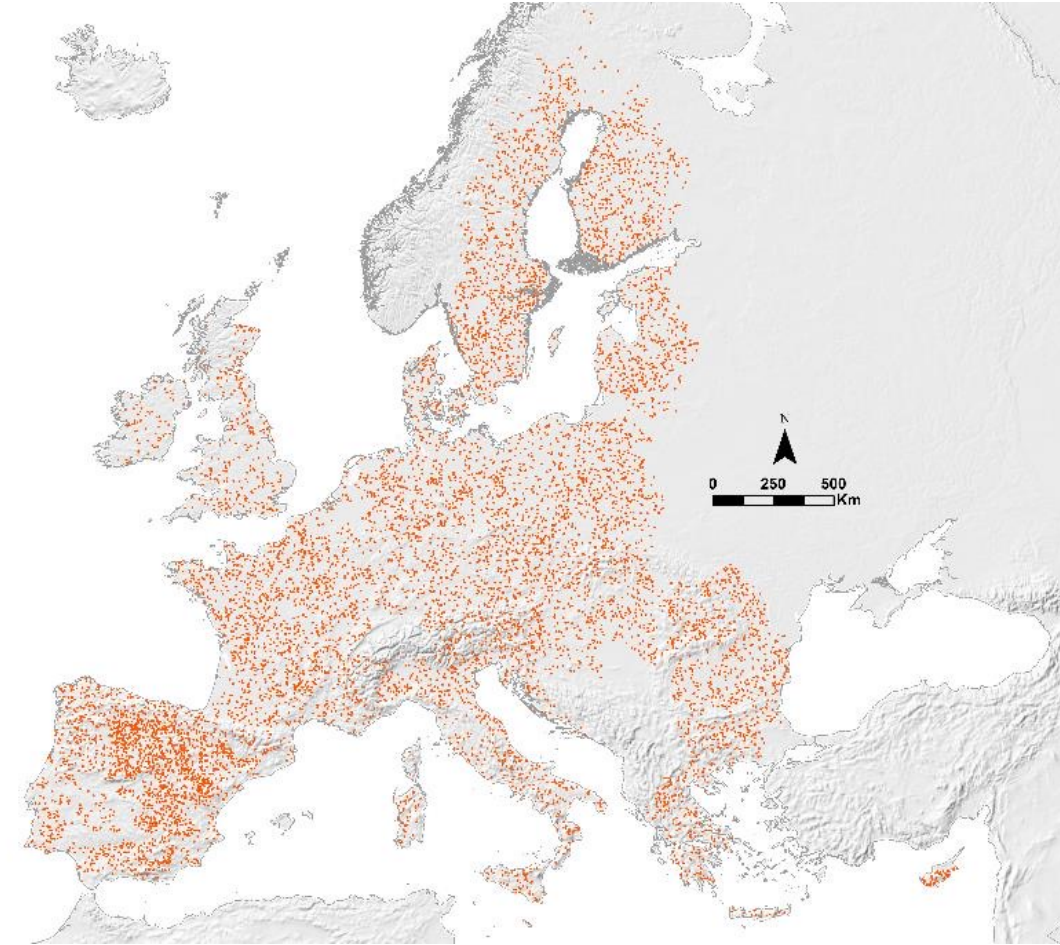

Soil characteristics can affect the presence of pollutants (e.g. pH, texture)

**Lack of investment in soil monitoring – lacking policy need**

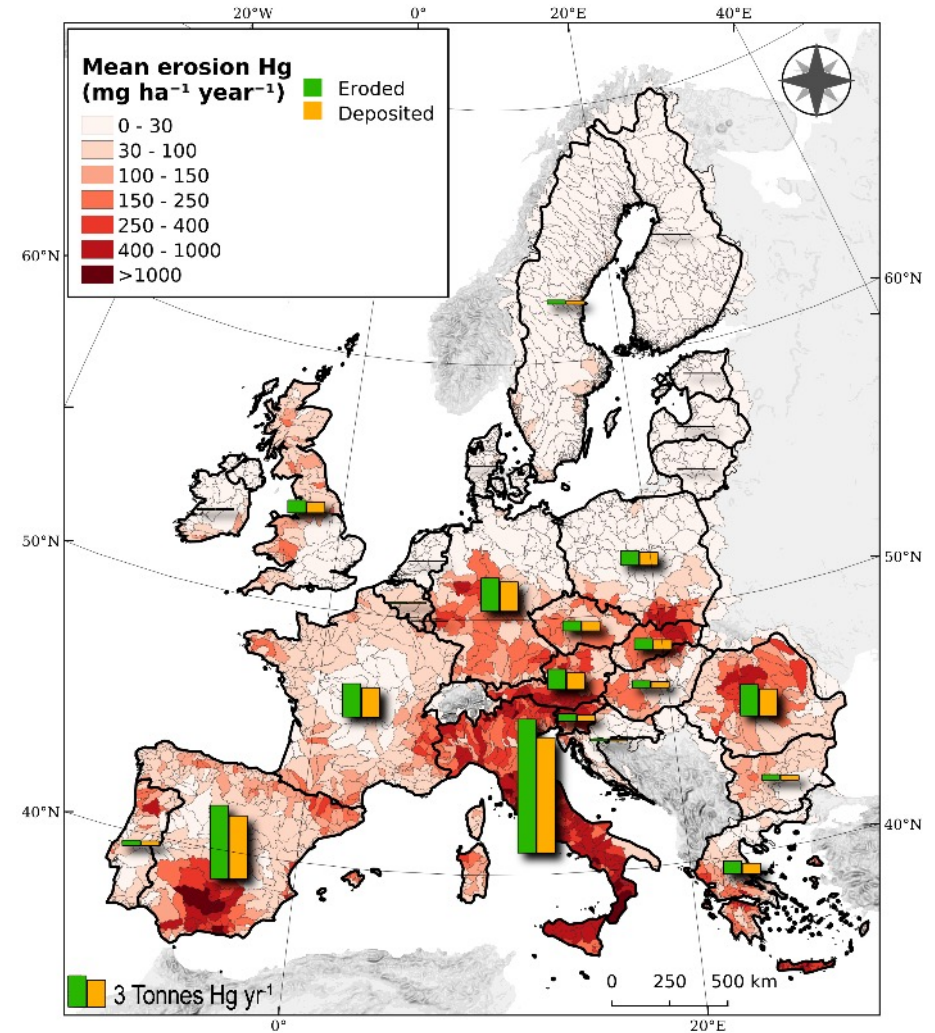

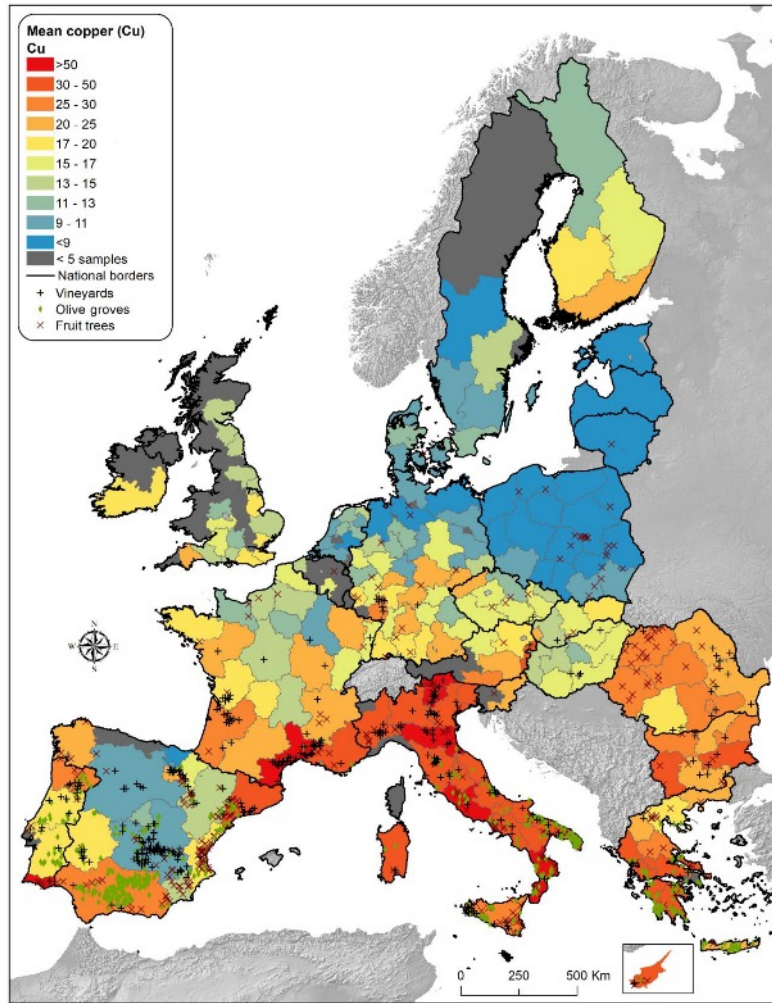

# LUCAS Soil Module

- Subset of EUROSTAT LUCAS Land Use/Cover Survey
- Carried out 2009/2012, 2015, 2018 & 2022
  - In single growing season
  - All MS
- 22,000 locations across EU – 41,000 locations
- Only harmonized soil data collection programme for EU
- Extending in scope – ZPAP calls for pollution module
- Basis of an integrated soil monitoring system (+MS)
- Methodology extended to Africa (Soils4Africa Project)

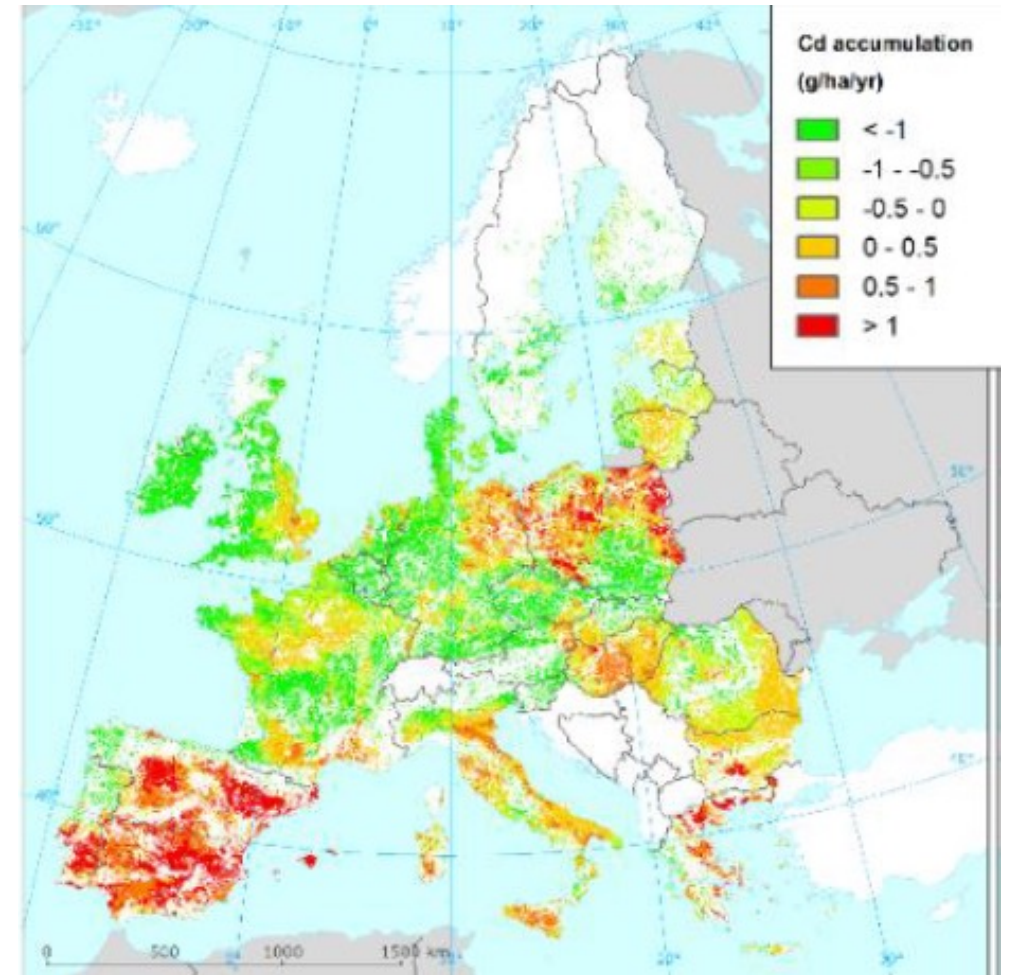

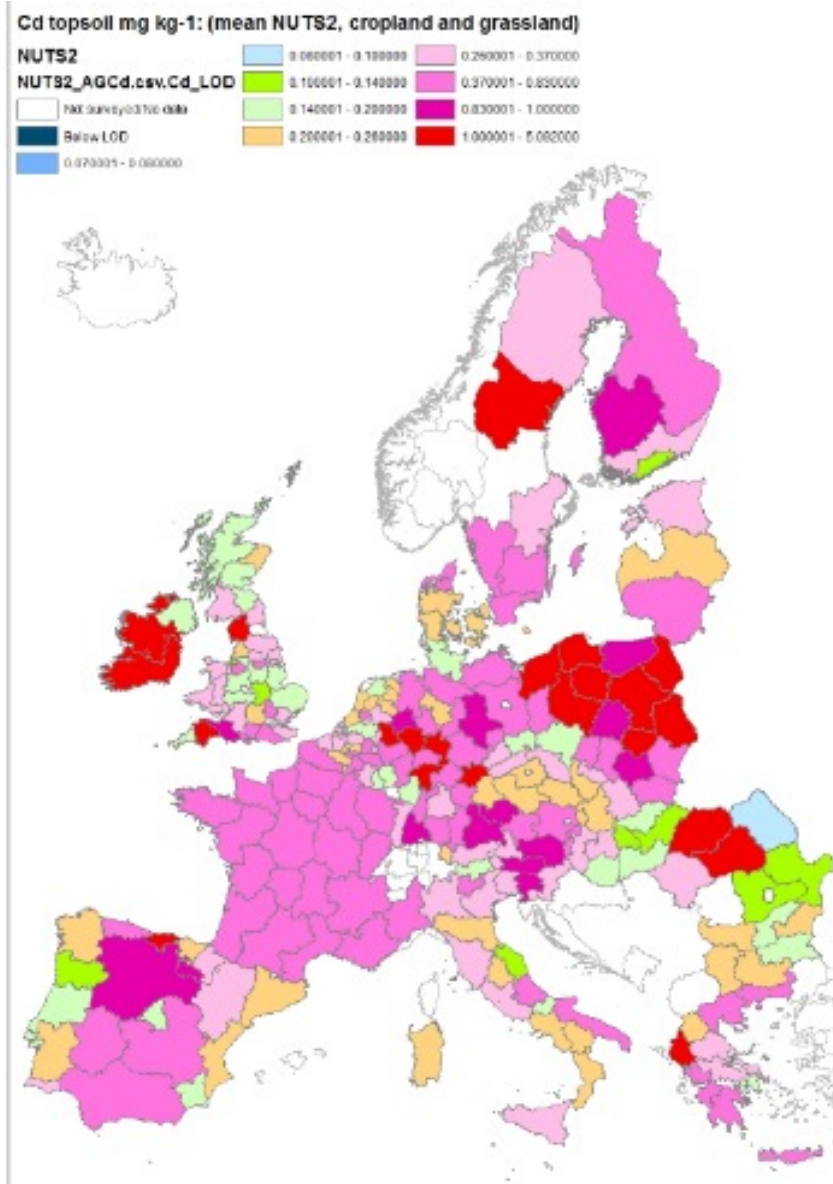

# LUCAS = Concentrations of metals in topsoils

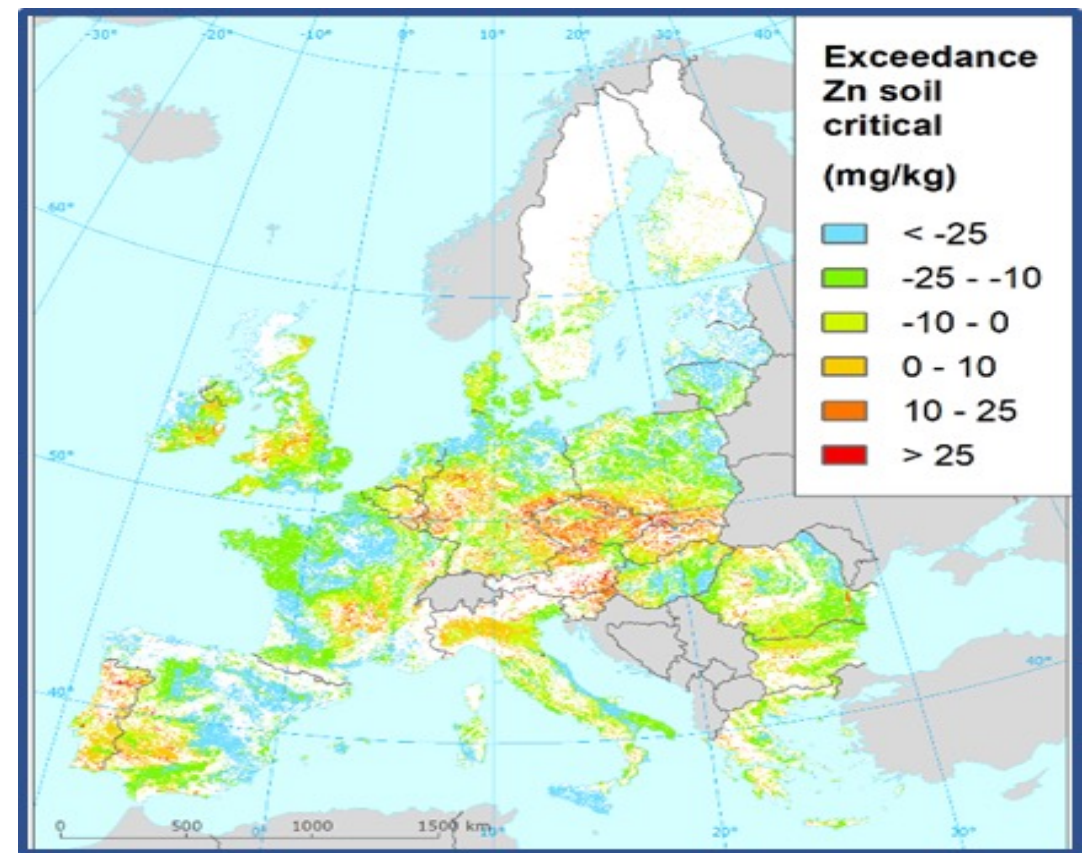

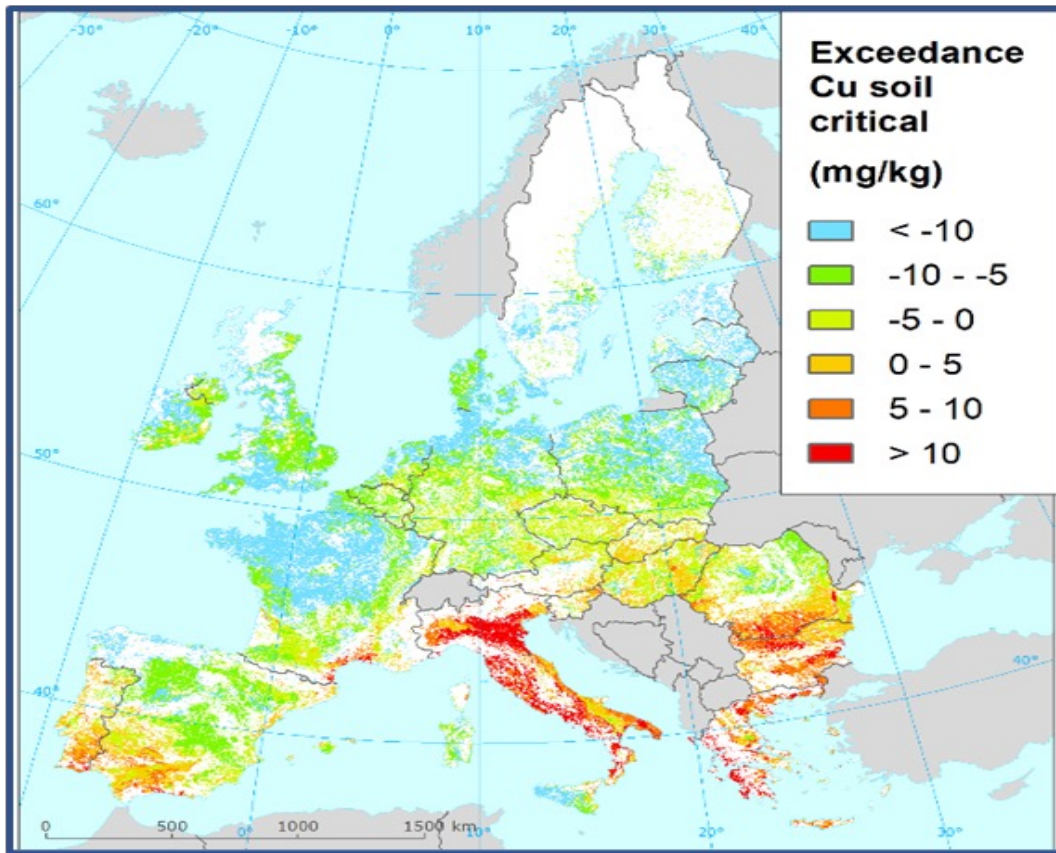

# Concentrations of metals in topsoils

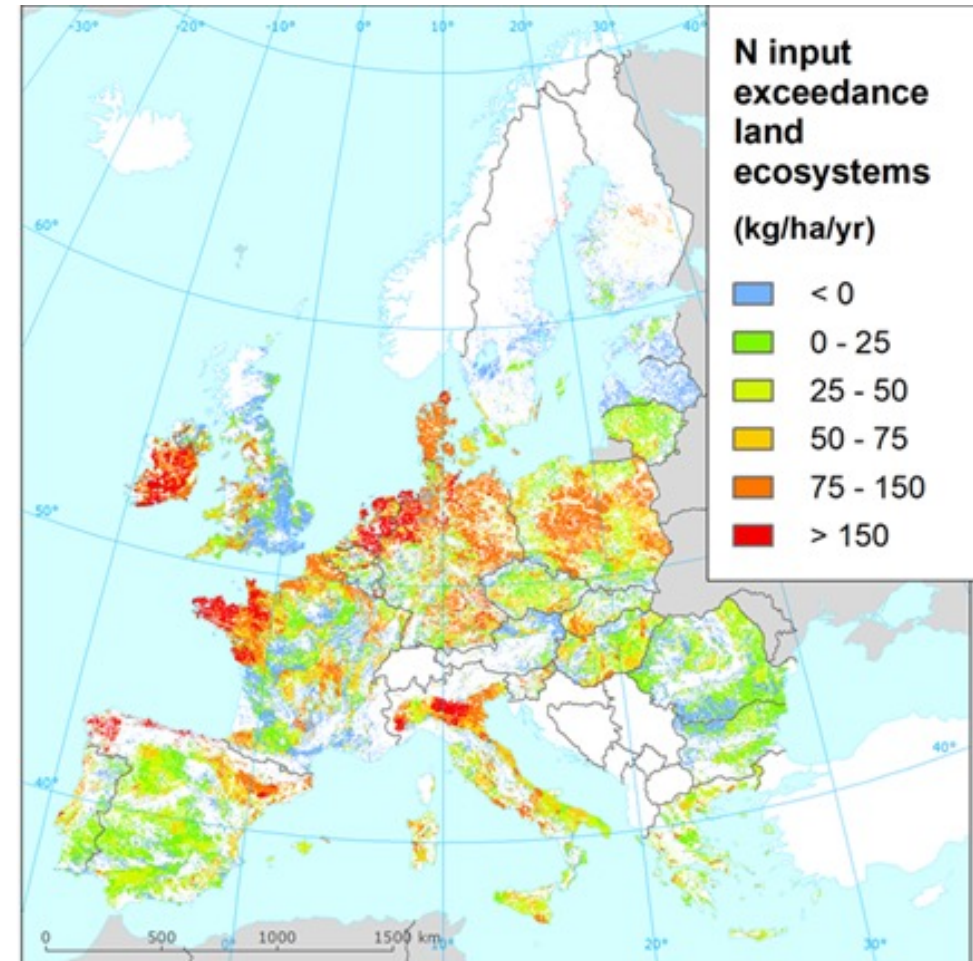

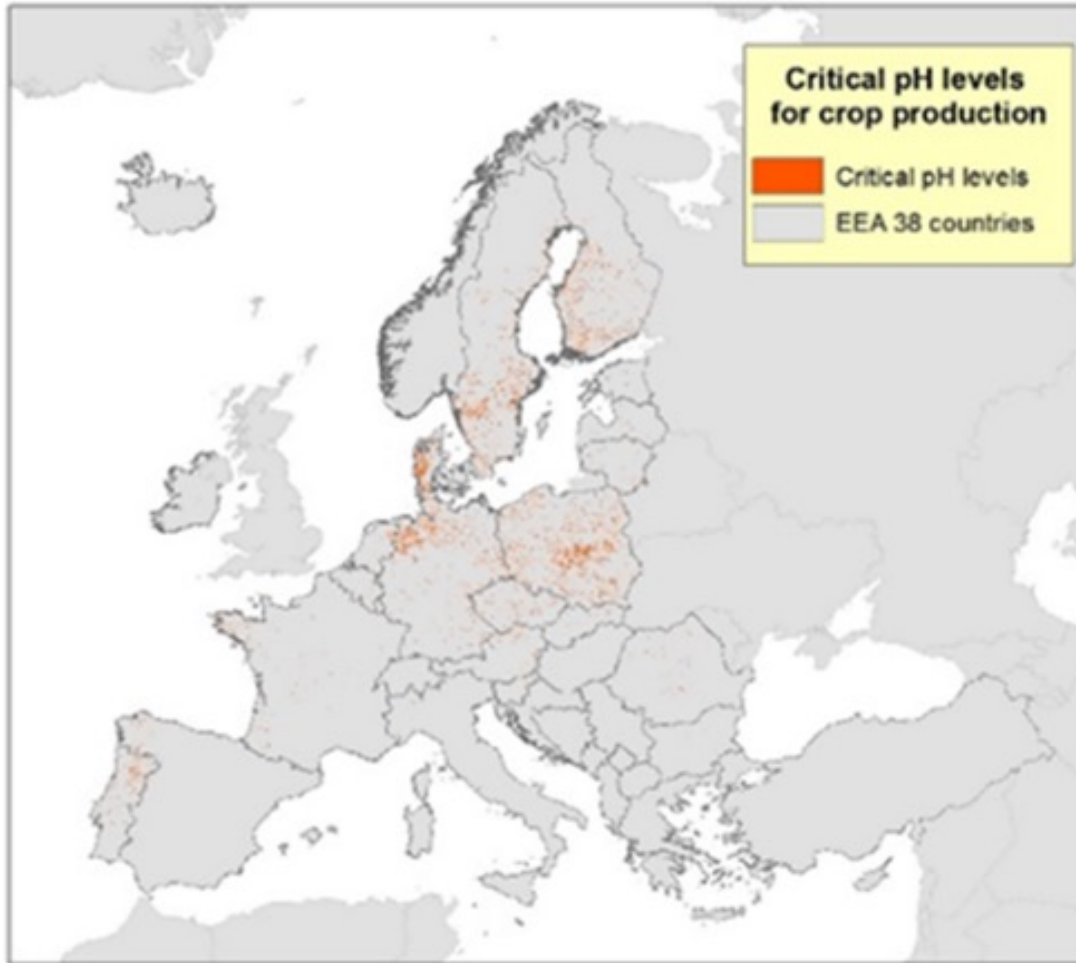

currently not exceeding critical limits but levels are increasing in places

	Metal threshold exceedance	
	Cu	Zn
Arable land (including pasture)	23%	18%

# Nutrients

Currently, 6.9 % of the arable land shows signs of acidification

# Pesticides

More than 80% of the tested soils contained pesticide residues

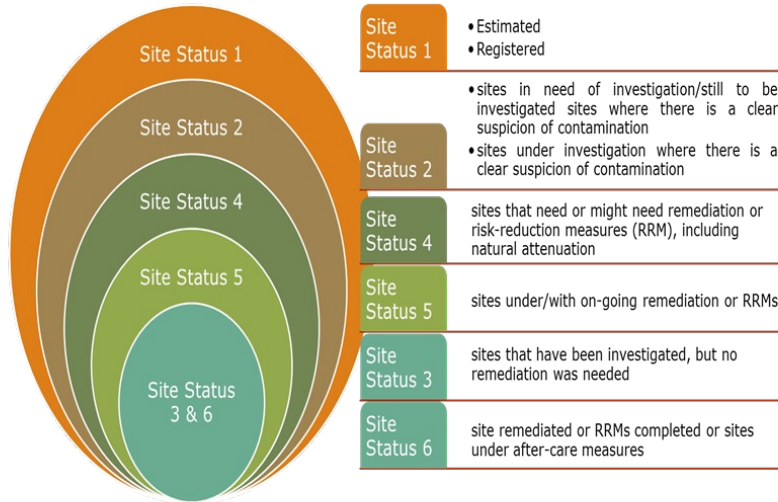

25% of samples had 1 residue

58% of samples had mixtures of two or more residues

Silva et al. 2018

# Contaminated sites

- **2,8 million sites** have been **estimated** where **polluting activities** have taken place considering the artificial surface.
- **694 000 registered sites** where **polluting activities** took/are taking place in national and regional inventories of replying countries;
- **more than 235 000 sites** have been **remediated**.
- **Efforts focused on investigation and remediation of sites** where **polluting activities** took/are taking place due to **many countries** already have an accurate inventory.

PCS identified and registered

Remediated sites (totals since registration)

# Challenges

Microplastics?

Work in progress/needed: PFAS, PAHC, pharmaceuticals, trends....  
Specific case studies (Regions, MS) but no consolidated EU perspective

# Key messages from soil pollution

## Chemical contamination of soils is widespread

- Almost 3 million contaminated and potentially contaminated sites
  - Increase in remediation but more identified - definitions
- Some agricultural soils show exceedance of critical levels of metals and agrochemicals (nutrients, plant protection products)
- Much unquantified in terms of spatial extent, concentration, risk, trends
- Outlook

# Thanks for your attention

Any questions?

✉ [arwyn.jones@ec.europa.eu](mailto:arwyn.jones@ec.europa.eu)

# Pollution Summary Report: where is the world in taking action to address pollution ? an SDG lens

---

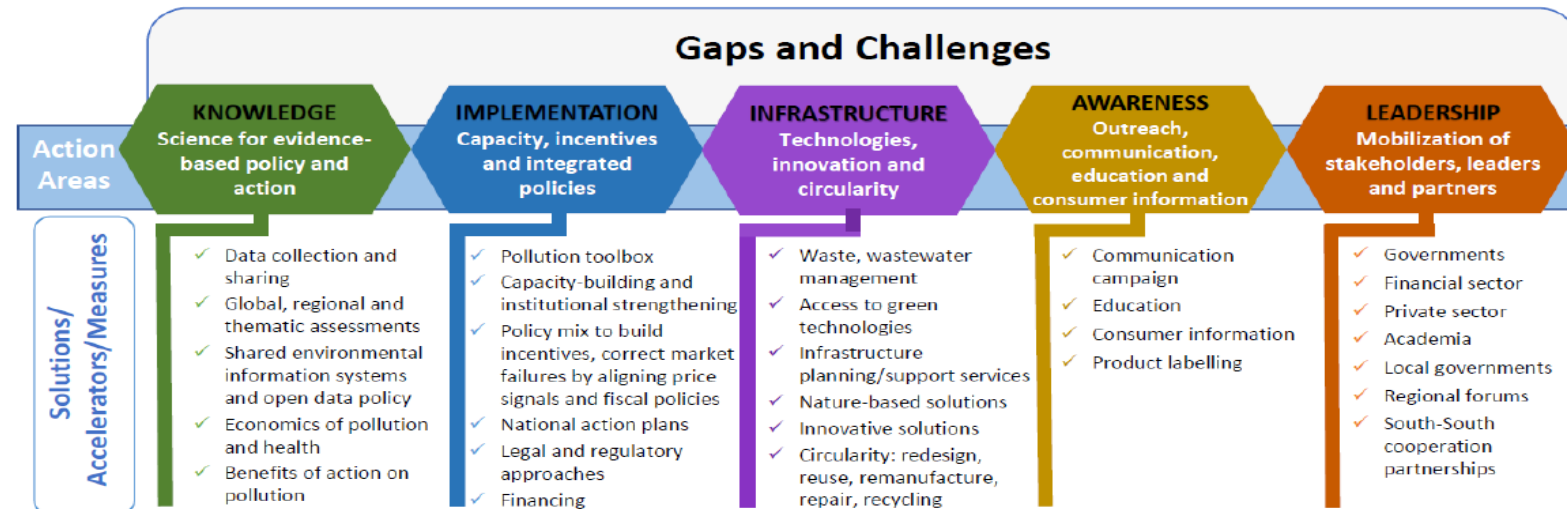

Stakeholder Workshop “Towards a Zero Pollution Monitoring and Outlook” – 24-25 May 2022

---

# Background - Why this report?

- UNEA by Ministerial Declaration at its 3<sup>rd</sup> session highlighted the need for rapid, large-scale and coordinated action against pollution.
- Implementation Plan “Towards a Pollution-Free Planet” was developed and welcomed by UNEA Resolution 4/21
- The Implementation Plan
  - Aims to accelerate action and strengthen capacities to address pollution, across all environmental media
  - Focuses on five key action areas: knowledge, implementation, infrastructure, awareness, leadership
  - Calls for tracking progress toward accelerating action to reduce pollution

# Scope and aim

- Holistic approach
- Overview of the status of global pollution, using an SDG lens
- Focuses on the following themes, in line with the Implementation Plan “Towards a Pollution-Free Planet”:
  - 1- Air Pollution
  - 2- Freshwater Pollution
  - 3- Land & Soil Pollution
  - 4- Marine & Coastal Pollution
  - 5- Chemicals & Waste Pollution
- Focuses on global and regional levels action
- Aims to identify gaps and actions to close the gaps
- Takes stock/builds on thematic reports

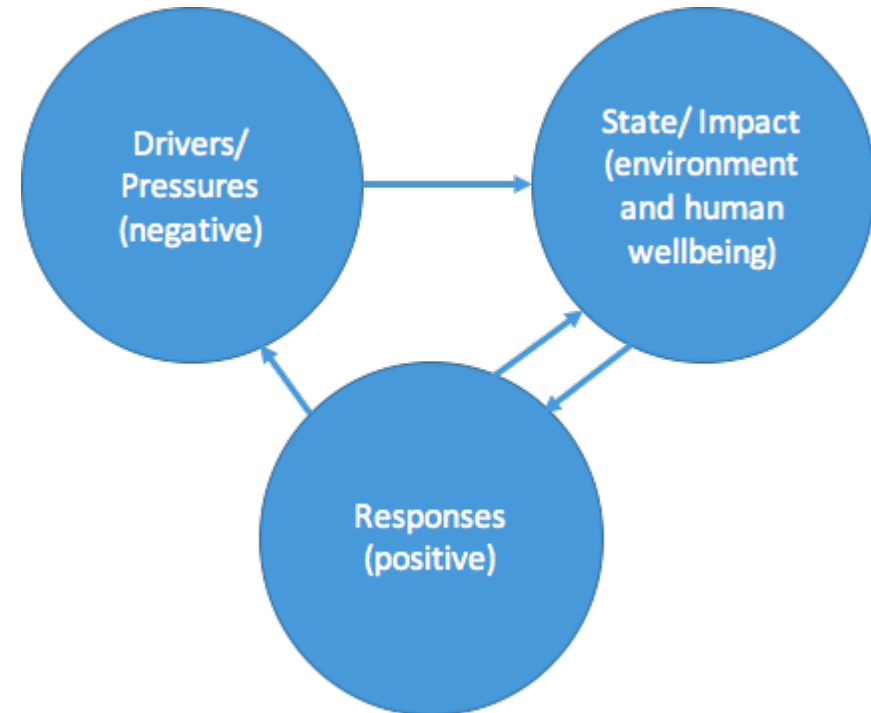

# Overview of the Report

---

- Chapter 1- Background information, pollution and sustainable development, links with health, One Health, social dimensions
- Chapter 2- The situation of pollution based on relevant SDG indicators data, by theme
- Chapter 3- Actions to address pollution: overview of global / regional frameworks (e.g. MEAs, global guidelines etc.)
- Chapter 4- Gaps and ways to close them

# Approach

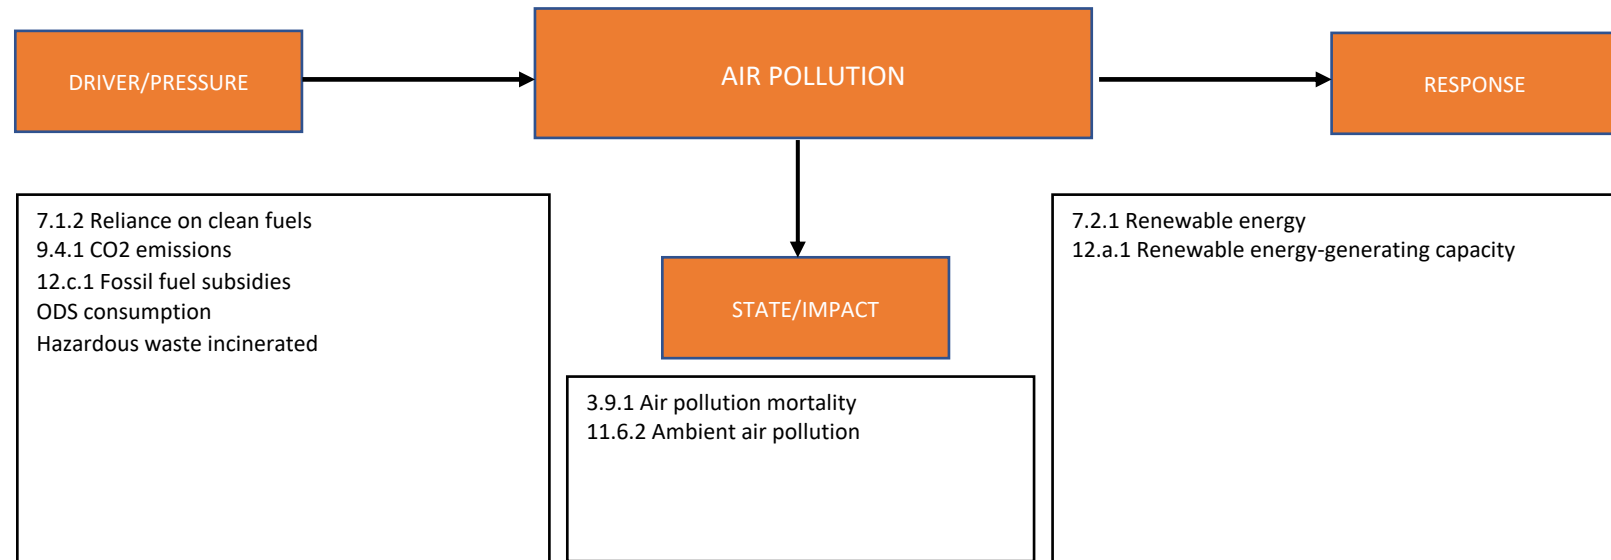

- The DPSIR framework is used to identify and categorize pollution-related indicators into drivers, pressures, state, impact and responses.
- SDG indicator framework - SDG indicators that are directly/indirectly related to pollution
- Criteria for selecting indicators: relevant, sound methodology, data availability

# Indicators framework - Air Pollution

SDGs with indicators that are directly relevant to Air Pollution include:

- SDG 3 Good Health & Well Being
- SDG 7 Affordable & Clean Energy
- SDG 9 Industry, Innovation and Infrastructure
- SDG 11 Sustainable Cities & Communities
- SDG 12 Responsible Consumption & Production

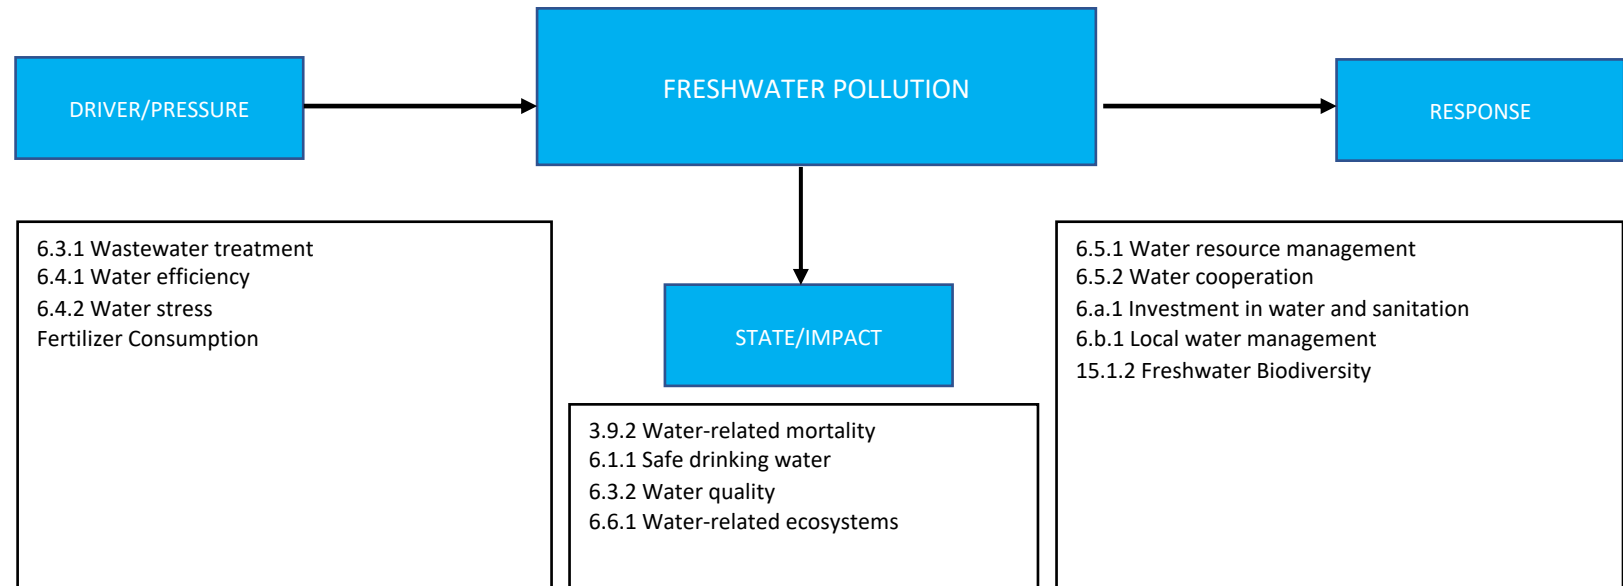

# Indicators framework - Freshwater Pollution

SDGs with indicators that are directly relevant to Freshwater Pollution include:

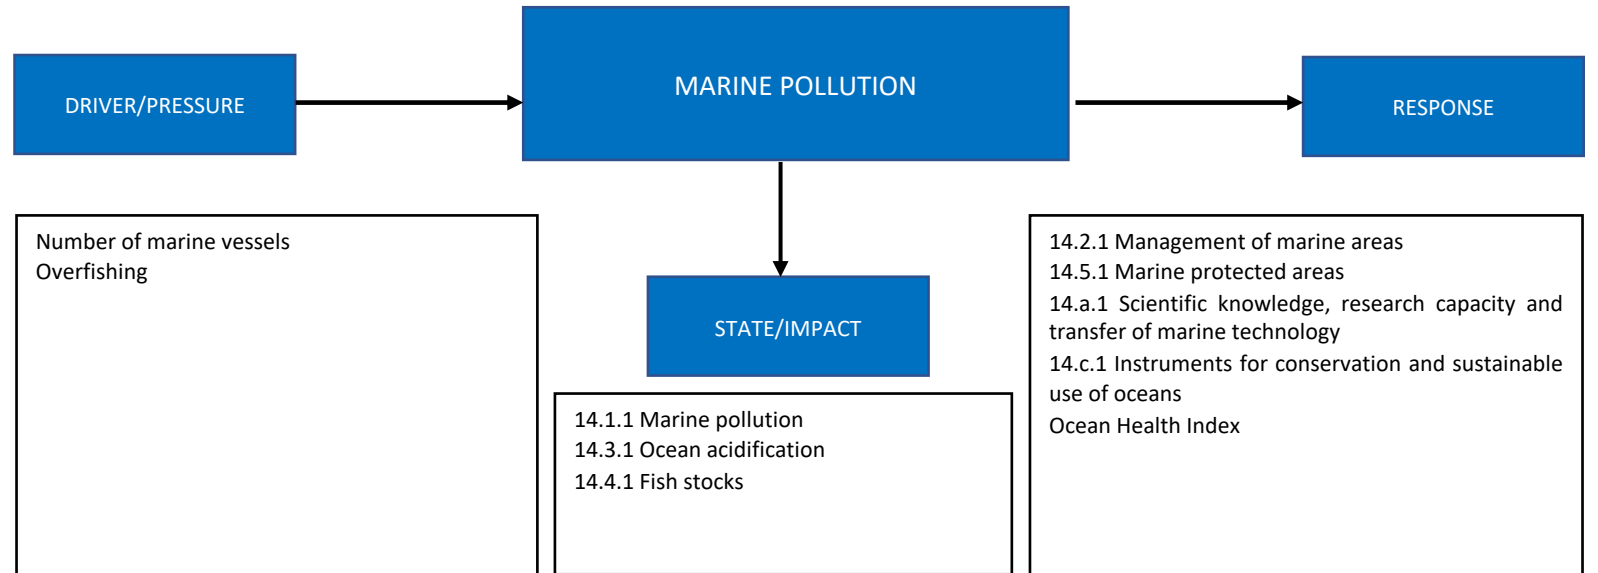

- SDG 3 Good Health & Well Being
- SDG 6 Clean Water & Sanitation
- SDG 15 Life on Land

# Indicators framework - Marine & Coastal Pollution

SDGs with indicators that are directly relevant to Marine & Coastal Pollution include:

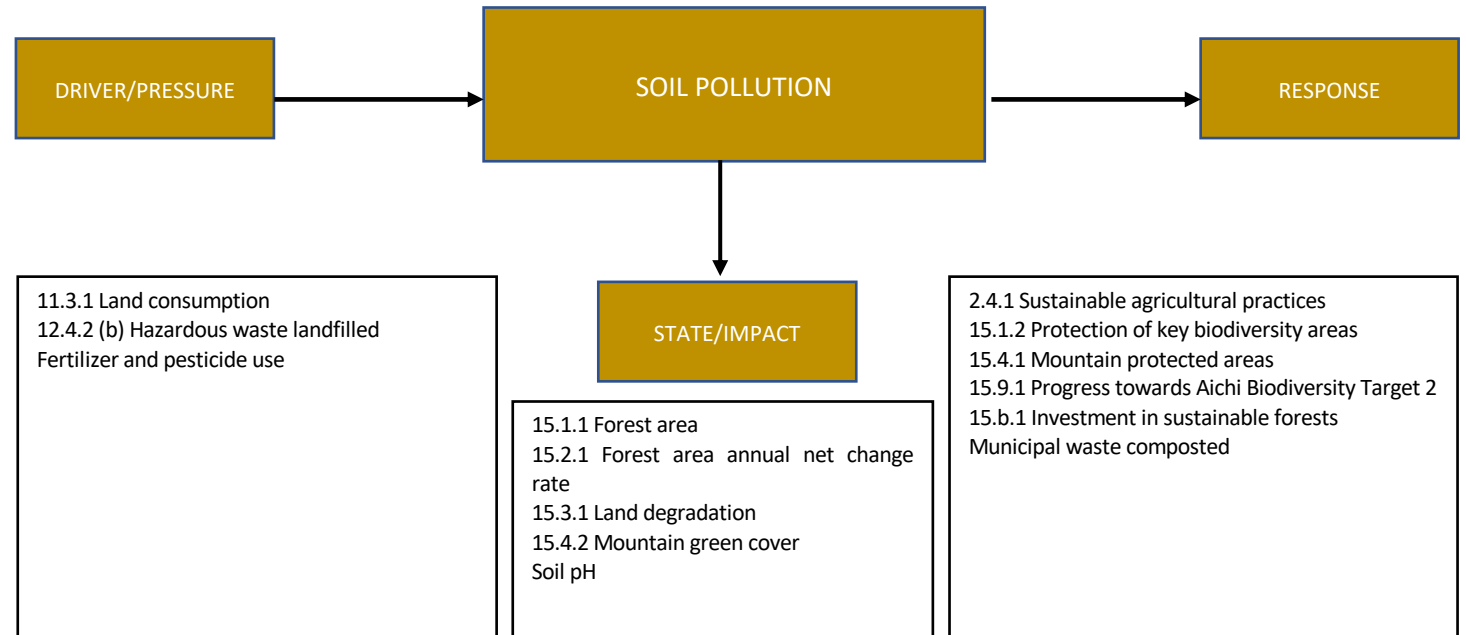

- SDG 14 Life Below Water

# Indicators framework - Land & Soil Pollution

SDGs with indicators that are relevant to Land & Soil Pollution include:

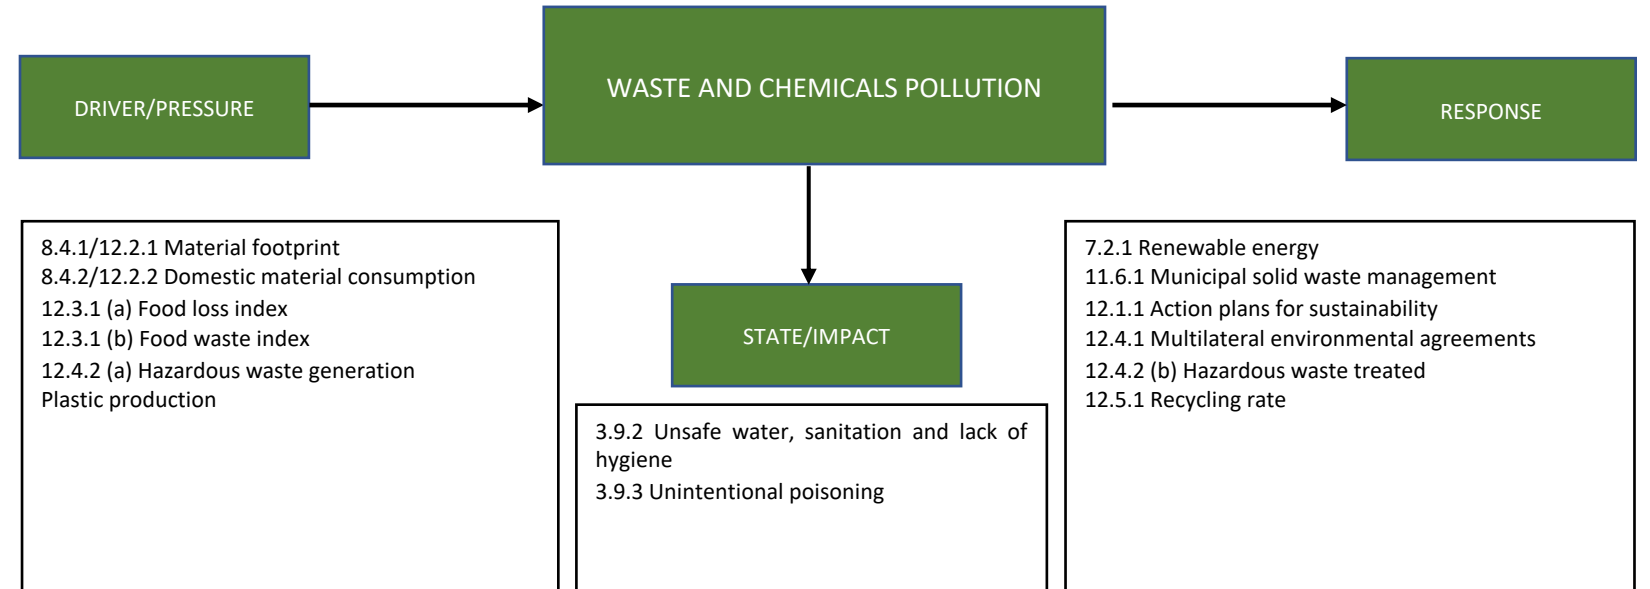

- SDG 2 Zero Hunger
- SDG 11 Sustainable Cities & Communities
- SDG 12 Responsible Consumption & Production
- SDG 15 Life on Land

# Indicators framework - Chemicals & Waste

SDGs with indicators that are directly relevant to Chemicals & Waste include:

- SDG 3 Good Health & Well Being
- SDG 7 Affordable & Clean Energy
- SDG 8 Decent Work and Economic Growth
- SDG 11 Sustainable Cities & Communities
- SDG 12 Responsible Consumption & Production

# Progress

---

- Expert workshop organized to receive inputs on gaps (Q3 2021)
- Zero draft report completed (Q1 2022)
- Peer review process (Q1 and Q2 2022) (over 1000 comments)
- Internal review/ editing / summary / layout / visuals (Q 2 and Q3 2022)
- Launch and dissemination (Q3-Q4 2022)
- Embedding in SDG page for live updates (Q3-Q4 2022)

# Challenges /major conclusions and opportunities

---

- No comprehensive global framework to measure progress on pollution
- Pollution is a key barrier to achieving the SDGs, but SDGs framework only partially useful for progress monitoring
- Major gaps in indicators, knowledge, methods and data confirmed
- Major differences in data availability and progress across regions and themes
- A diverse, complex agenda – various possible ways to look at pollution
  
- Evolving and growing body of knowledge
- Stronger (yet insufficient) global attention to pollution
- Evolving global agendas, mandates and frameworks
- A dedicated science-policy interface in the making

## Resolutions from UNEA 5.2 – Invigorating the sustainable management of chemicals and waste and combatting pollution

<b>5/Resolution 2: Sustainable nitrogen management</b>	<b>5/Resolution 6: Biodiversity and Health</b>	<b>5/Resolution 7: Sound management of chemicals and waste (Omnibus resolution)</b>	<b>5/Resolution 8: Science-Policy Panel to contribute further to the sound management of chemicals and waste and to prevent pollution</b>	<b>5/Resolution 12: Environmental aspects of minerals and metals management and</b>	<b>5/Resolution 14: End plastic pollution: Towards an international legally binding instrument</b>
<ul style="list-style-type: none"> <li>• Nitrogen waste</li> <li>• Air pollution</li> <li>• Waste</li> <li>• Waste water</li> </ul>	<ul style="list-style-type: none"> <li>• Antimicrobial resistance (AMR)</li> </ul>	<ul style="list-style-type: none"> <li>• SAICM</li> <li>• Special Programme</li> <li>• Green and Sustainable Chemistry</li> <li>• Pesticides and Fertilizers</li> <li>• Endocrine Disrupting Chemicals</li> <li>• Asbestos</li> <li>• IOMC and MEA cooperation</li> </ul>	<ul style="list-style-type: none"> <li>• Science-Policy Interface, concerning chemicals, waste, and pollution</li> </ul>	<ul style="list-style-type: none"> <li>• Global Mercury Partnership</li> <li>• Artisanal Small-scale Gold Mining (ASGM)</li> </ul>	<ul style="list-style-type: none"> <li>• Chemicals in plastics</li> </ul>

# *Lancet* Commission on Pollution and Health - an Update

Rich Fuller [richfuller@gahp.net](mailto:richfuller@gahp.net)

May 2022

---

# Many thanks to our *Lancet* Update donors:

---

**Government Offices of Sweden**  
**Ministry of the Environment**

Schweizerische Eidgenossenschaft  
Confédération suisse  
Confederazione Svizzera  
Confederaziun svizra

**Swiss Agency for Development  
and Cooperation SDC**

# *Lancet* Commission on pollution and health - Update

- Update publication 18 May 2022 - *Lancet Planetary Health*
- Original Commission published in 2017 used 2015 data. This update uses 2019 data.
- **Pollution is still killing 9 million people a year**
  - Low and middle income countries (LMICs) suffer the worst of it
  - Wealthy countries show improvement, especially in air pollution
  - Traditional pollution (sanitation, household air pollution) improvement offset by modern pollution (air pollution, chemicals, lead).
  - Modern pollution is getting *much* worse

# Other Key Findings

**9 MILLION** premature deaths = **16%** of all deaths worldwide

- **Policy response has been poor in LMICs, as has donor response**
  - Only a few countries have targeted pollution in their development agendas. Very little development assistance allocated
- **Transboundary pollution a growing concern – affects all**
  - Focus is needed on chemicals, (especially lead) and air pollution.
- **This huge public health problem has been largely ignored**
- **We've dropped the ball**

# Modern vs Traditional Pollution over time

## *Modern Pollution – globally - getting worse*

- Traditional pollution falling – household and sanitation
- Modern pollution death is growing
  - Industrialization and Urbanization
  - Includes **Ambient air**
  - and **lead and occupational chemicals**
- 92 percent in low and middle-income countries

**Modern Pollution deaths  
have increased 66 % in  
the last 20 years**

# Europe – 1990 to 2019 trends

*Air pollution decreasing. Chemicals risks increasing. Lead increasing.*

*Chemicals – lead and occupational risks – combined AS LARGE as air pollution and GROWING*

## Legend

- European Union, Both sexes, All ages, All causes, risk: Unsafe water, sanitation, and handwashing
- European Union, Both sexes, All ages, All causes, risk: Occupational carcinogens
- European Union, Both sexes, All ages, All causes, risk: Occupational particulate matter, gases, and fumes
- European Union, Both sexes, All ages, All causes, risk: Air pollution
- European Union, Both sexes, All ages, All causes, risk: Lead exposure

# Ambient Air Pollution

## *Ambient and Climate Action*

---

- **Climate driver** remains key
- Action on climate may be better for health than action on ambient alone

# Lead and Chemicals – Trending up globally

## Premature Deaths from Pollution

IHME 2019

Malaria  
643,000

HIV  
864,000

Additional chemicals currently not estimated by IHME\*

**Chemical Pollution**  
- Undercounted  
- Not adequately measured

**Note: Current SDG 3.9.3 metric - Deaths from pesticides (unintentional poisonings)**  
- just 11,000 pa  
(Pesticide suicides – 138,000)

\*Preliminary expert assessment only. Excludes suicides.

# Lead Poisoning Ubiquitous

## *Lead (Pb) – no longer from gasoline*

- Easily the **MOST PROBLEMATIC** chemical (but ignored in SDG 3.9.3)
- **800 million children** are currently lead poisoned – One in three children globally
  - **Blood Lead Levels exceeding 5 µg/dl**, (US CDC recommends intervention at 3.5 ug/dl)
- **Sources of exposure** include **unsound recycling of car batteries, adulterated spices, contaminated cookware, paint**

The Toxic Truth  
**Report – UNICEF and Pure Earth**

# Lead Pollution Impacts Us All

## *Lead (Pb)*

---

### **Lead is becoming a major transboundary risk**

- NYC Department of Health considers imports to be the next largest US source of lead exposure, after leaded paint and lead in pipes.

### **Lead is found in imported:**

- Spices (sometimes added for color)
- Baby food (sweet potatoes, others)
- Leafy greens, some grains
- Toys, medicines, cosmetics

# Chemical Pollution – Not Just Premature Mortality

## *Chemical Pollution*

---

- **Neurotoxicity impacts IQ** (lead especially)
  - Lower productivity – loss of GDP
  - Higher rates of societal violence
  - Lower educational attainment
- **Reproductive toxicity and immunotoxicity**
  - COVID 19 outcomes
  - Endocrine disruptors

- **Science Policy Platform** (UNEA5 resolution) - a great step forward
- **Assess priority chemicals** based on health and environmental impact
- **Fix the SDG 3.9.3 indicator**

# Recommendations – for governments and development agencies

*LMICs needs action, and benefits are global.*

**Prevention  
is Key**

- **All Sectors – make Modern Pollution a PRIORITY**
- **Integrate pollution within development strategies**
- **Undertake Health and Pollution Action Planning**  
Involving all critical agencies (health, environment, finance, industry, transportation, etc.) GAHP is assisting countries to do these

# Recommendations

## *Measuring is the first step*

---

- **Monitor pollution**
  - Ambient air monitors – relatively inexpensive, and empowers local action
  - Lead (Pb) monitoring – newborns, pregnant mothers, children
  - Develop bio-monitoring systems for other chemicals
    - Biomonitoring per Stockholm (POPS) and Minamata (mercury), and SDG 12.4

# Recommendations

## *Modern Pollution lacks attention*

---

- Consider **transboundary exposures** in chemicals
  - Border controls will never be adequate.
  - Reduce problems at source (international support)

# Session 3: Zero Pollution Outlook

Presentations from JRC and DG ENV

# Towards a Monitoring and Outlook Framework for the Zero Pollution Ambition (SWD(2021) 141)

Preparation of the first Zero Pollution Outlook High-Level Synthesis

*Stakeholder Workshop “Towards a Zero Pollution Monitoring and Outlook”*

*24 & 25 May 2022*

# The Zero Pollution Outlook

- The Zero Pollution Outlook will
  - analyse synergies and trade-offs between different EU policies,
  - help translate 'early warnings' into recommendations on pollutants of increasing concern based on the latest research findings.
- The first Zero Pollution Monitoring and Outlook Report is planned for 2022.

Brussels, 12.5.2021  
COM(2021) 400 final

**COMMUNICATION FROM THE COMMISSION TO THE EUROPEAN  
PARLIAMENT, THE COUNCIL, THE EUROPEAN ECONOMIC AND SOCIAL  
COMMITTEE AND THE COMMITTEE OF THE REGIONS**

**Pathway to a Healthy Planet for All**  
*EU Action Plan: 'Towards Zero Pollution for Air, Water and Soil'*

{SWD(2021) 140 final} - {SWD(2021) 141 final}

# The Zero Pollution Outlook

# State-of-Play

- Details set out in SWD document adopted on 12 May 2021
- Document a starting point, not a rigid framework
- Strong link to existing legislation
- Implementation needs to address open issues and 'fix' elements for first report

Brussels, 12.5.2021  
SWD(2021) 141 final

## COMMISSION STAFF WORKING DOCUMENT

**Towards a monitoring and outlook framework for the zero pollution ambition**

*Accompanying the document*

**Communication from the Commission to the European Parliament, the Council, the European Economic and Social Committee and the Committee of the Regions**

**Pathway to a Healthy Planet for All**

***EU Action Plan: 'Towards Zero Pollution for Air, Water and Soil'***

{COM(2021) 400 final} - {SWD(2021) 140 final}

# Clean Air Outlook

“Towards a Zero Pollution Monitoring and Outlook”  
Stakeholder Workshop - 24 May 2022

*Viviane André*

*European Commission, DG ENV,  
Clean air and urban policy*

# What are the Clean Air Outlook reports ?

**Regular modeling exercise** (based on GAINS model) **to assess the progress towards compliance with National Emission reduction Commitments** for 2020-29 and 2030 onwards set in the NEC Directive (EU) 2016/2284

- Progress towards reducing air pollutants emissions and background concentration and related
  - **health impacts**
  - **ecosystem impacts**
- Monetisation of these impacts, to assess the costs of air pollution and the benefits of its reduction
- Wider economic impacts (on GDP and productivity)
- Transboundary impacts of air pollution and of its reduction

## **Analysis conducted for various scenarios:**

- Baseline, updated each time to include latest EU policies
- Policy scenarios, in particular in terms of more ambitious energy and climate objectives

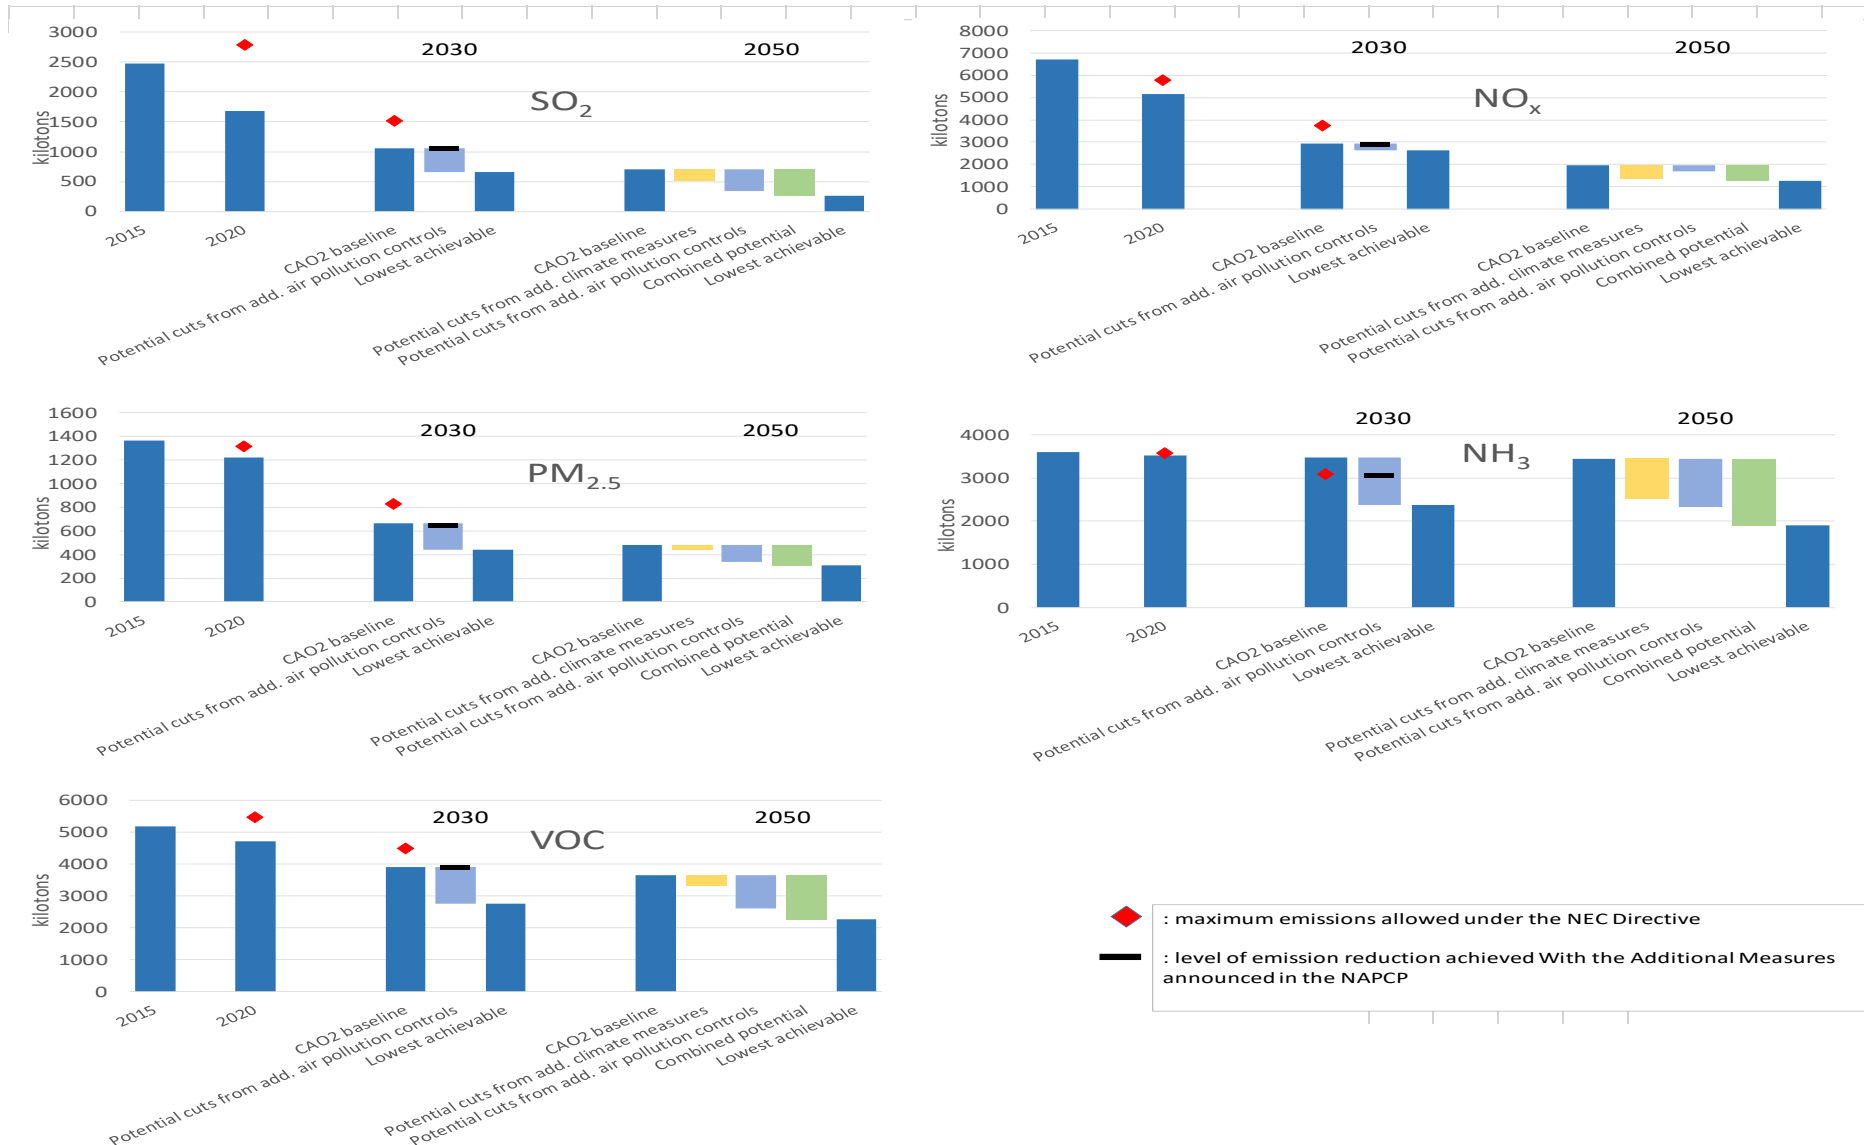

**Commission reports, supported by IIASA reports (2018 and 2021)**

**Tool to support discussion with Member States and all stakeholders**

# Second Clean Air Outlook: Structure

1. Introduction
2. **State of air pollutant emissions and air quality, and progress towards compliance**
  - 2.1. Current air pollutant emissions and air quality situation
  - 2.2. Progress towards compliance
  - 2.3. Follow-up to the fitness check of the AAQD
3. **Implementation of the NEC Directive and supportive EU legislation**
  - 3.1. Changes in legislation contributing to clean air
  - 3.2. Prospects for achieving the ERC in the NEC Directive for 2030 and beyond
4. **Prospects for attaining long-term objectives**
  - 4.1. Pollutant background concentration
  - 4.2. Health impacts
  - 4.3. Ecosystem impacts
  - 4.4. Economic impacts
5. **Interactions with climate change and climate policy**
  - 5.1. Prospects for emissions of short-lived climate forcers (methane and black carbon)
  - 5.2. Co-benefits and trade-offs between policies
6. **Transboundary and international dimension**
7. Conclusion

# Examples of findings from 2<sup>nd</sup> Clean Air Outlook: Projected emissions of main air pollutants in EU-27 under various scenarios

# Examples of findings from 2<sup>nd</sup> Clean Air Outlook: Achievement of long term objective of halving health impacts of air pollution

**Figure 2: Distribution of population exposure to PM<sub>2.5</sub> for key scenarios, EU-27 (Source: IIASA)**

Note: MTFR stands for ‘Maximum Technically Feasible air pollution Reduction measures’.

# Examples of findings from 2<sup>nd</sup> Clean Air Outlook: Ecosystem impacts

Figure 4: Area of terrestrial ecosystems (1 000 km<sup>2</sup>) where nitrogen deposits exceed the critical loads for eutrophication, EU-27

# Examples of findings from 2<sup>nd</sup> Clean Air Outlook: Economic impacts

Figure 5: Change in net benefits of clean air measures under various air and climate policy scenarios compared to baseline, in EUR billion per year (EU-27), based on a conservative valuation of all impacts (Source: JRC, in IIASA report)

# 2<sup>nd</sup> Clean Air Outlook is the basis for the Zero Pollution target 1

- **By 2030 the EU should reduce by more than 55% the health impacts (premature deaths) of air pollution**
- Basis: National Emission reduction Commitments Directive (EU) 2016/2284
- Description: **The reduction is projected to be achieved** through fine particulate matter (PM<sub>2.5</sub>) emissions reduction, **if all Member States implement all measures announced in their first National Air Pollution Control Programmes** (Article 6 of Directive (EU) 2016/2284) **to reach the objectives of the Directive, and based on the full implementation of other relevant legislation** (including, in particular, energy and climate policies). Reduction of emissions of air pollutants other than PM<sub>2.5</sub> (which are also covered by the NEC Directive) will deliver additional positive health effects.
- Reference year: 2005
- Evidence base: **Second Clean Air Outlook and underpinning study**
- Monitoring: **Update of the Clean Air Outlook** through the Zero Pollution Monitoring and Outlook Framework

# 2<sup>nd</sup> Clean Air Outlook is the basis for the Zero Pollution target 3

- **By 2030 the EU should reduce by 25% the EU ecosystems where air pollution threatens biodiversity**
- Basis: National Emission reduction Commitments Directive (EU) 2016/2284
- Description: **The Second Clean Air Outlook and its underpinning study calculated that, based on the full implementation of all measures announced by Member States in their first National Air Pollution Control Programmes (Article 6 of Directive (EU) 2016/2284), a reduction of 20% of the ecosystem areas measured as areas above ‘critical loads’ of nitrogen deposition can be achieved by 2030 compared to 2005.**
- These estimates do not take into account the additional measures needed to achieve the 50% reduction of nutrient losses as set out in both the Farm to Fork and the Biodiversity Strategies and the nature restoration targets set out in the 2030 Biodiversity Strategy. Thus, **a reduction of 25% compared to 2005 is proposed as a realistic ambition, achievable through the implementation of the measures already announced by the Member States in their first National Air Pollution Control Programmes in combination with the implementation of the additional measures needed to achieve the targets set in the Farm to Fork and Biodiversity Strategies.**
- Reference year: 2005
- Evidence base: Second Clean Air Outlook and underpinning study (in particular Table 3.12)
- Monitoring: **Update of the Clean Air Outlook** through the Zero Pollution Monitoring and Outlook Framework

# The third Clean Air Outlook

Will follow same approach as the 2 previous Clean Air Outlook reports

In addition: (non-exhaustive)

- Member States consulted on their respective national baseline
- Assessment of the prospect of achieving the 2 clean air targets from the ZPAP (per MS)
- Most efficient additional measures (if needed) to reach these targets
- Levels of pollutant emissions, concentration and cost-benefit analysis of reaching these targets, compared with other scenarios (baseline, MTRF, AAQD)

# Interplay between 3<sup>rd</sup> Clean Air Outlook and ZP Monitoring for air

- ZP Monitoring: state of play – **current** distance to ZP targets
- Clean Air Outlook: prospects of reaching the ZP targets under different scenarios **for the future**
- End of year: Adoption of COM 3<sup>rd</sup> Clean Air Outlook report and publication of supporting study and adoption of the Zero Pollution Monitoring and Outlook

## Clean Air Outlook

The **Second Clean Air Outlook (COM(2021)3)** was published in January 2021. It presents the prospects for reducing air pollution in Europe up to 2030 and beyond. It updates the analysis presented in the First Clean Outlook, in particular by including the measures put forward by Member States in their National Air Pollution Control Programmes and an increased level of ambition for fighting climate change.

The Second Clean Air Outlook is underpinned by a report ([report](#) + [annex](#)) from the International Institute of Applied Systems Analysis which presents in detail the methodology and results of the analysis.

**The First Clean Air Outlook (COM(2018)446)** published in 2018 was based on the objectives agreed by the co-legislators and the latest data on air pollutant emissions and concentrations. It updated the analysis undertaken for the Impact Assessment that underpinned the Commission Proposal for a Clean Air Programme for Europe.

Four supporting reports from the International Institute of Applied Systems Analysis accompanied this First Clean Air Outlook:

- An [overview report](#) containing much of the underlying analysis on which the Outlook is based
- An [economic report](#) summarising the cost-benefit analysis of the above
- A [report](#) on measures to address air pollution from agriculture
- A [report](#) on measures to address air pollution from small combustion sources

# Water/Marine Zero Pollution Outlook

Stakeholder Workshop

“Towards a Zero Pollution Monitoring and Outlook”

24 May 2022

# The Zero Pollution ambition (water/marine)

## ZP targets for 2030:

- improving air quality to reduce the number of premature deaths caused by air pollution by 55%;
- improving water quality by reducing waste, plastic litter at sea (by 50%) and micro-plastics released into the environment (by 30%);
- improving soil quality by reducing nutrient losses and chemical pesticides' use by 50%;
- reducing by 25% the EU ecosystems where air pollution threatens biodiversity;
- reducing the share of people chronically disturbed by transport noise by 30%, and
- significantly reducing waste generation and by 50% residual municipal waste.

# Water/marine Zero Pollution outlook

## Three pressures:

- Inorganic nutrient pollution (nitrogen & phosphate) → ZP target: -50% @ 2030
- Chemical pollution (pesticides) → ZP target: -50% @ 2030
- Macroplastic pollution → ZP target: -50% @ 2030

***How close to the ZP targets can we get?***

# Water/marine Zero Pollution outlook

- Two scenarios:
  - A reference scenario: situation 2000 – 2018 (pollution and climatic conditions)
  - A future scenario (HAS): situation 2018 – 2030 (set of measures to fight pollution + climate change).

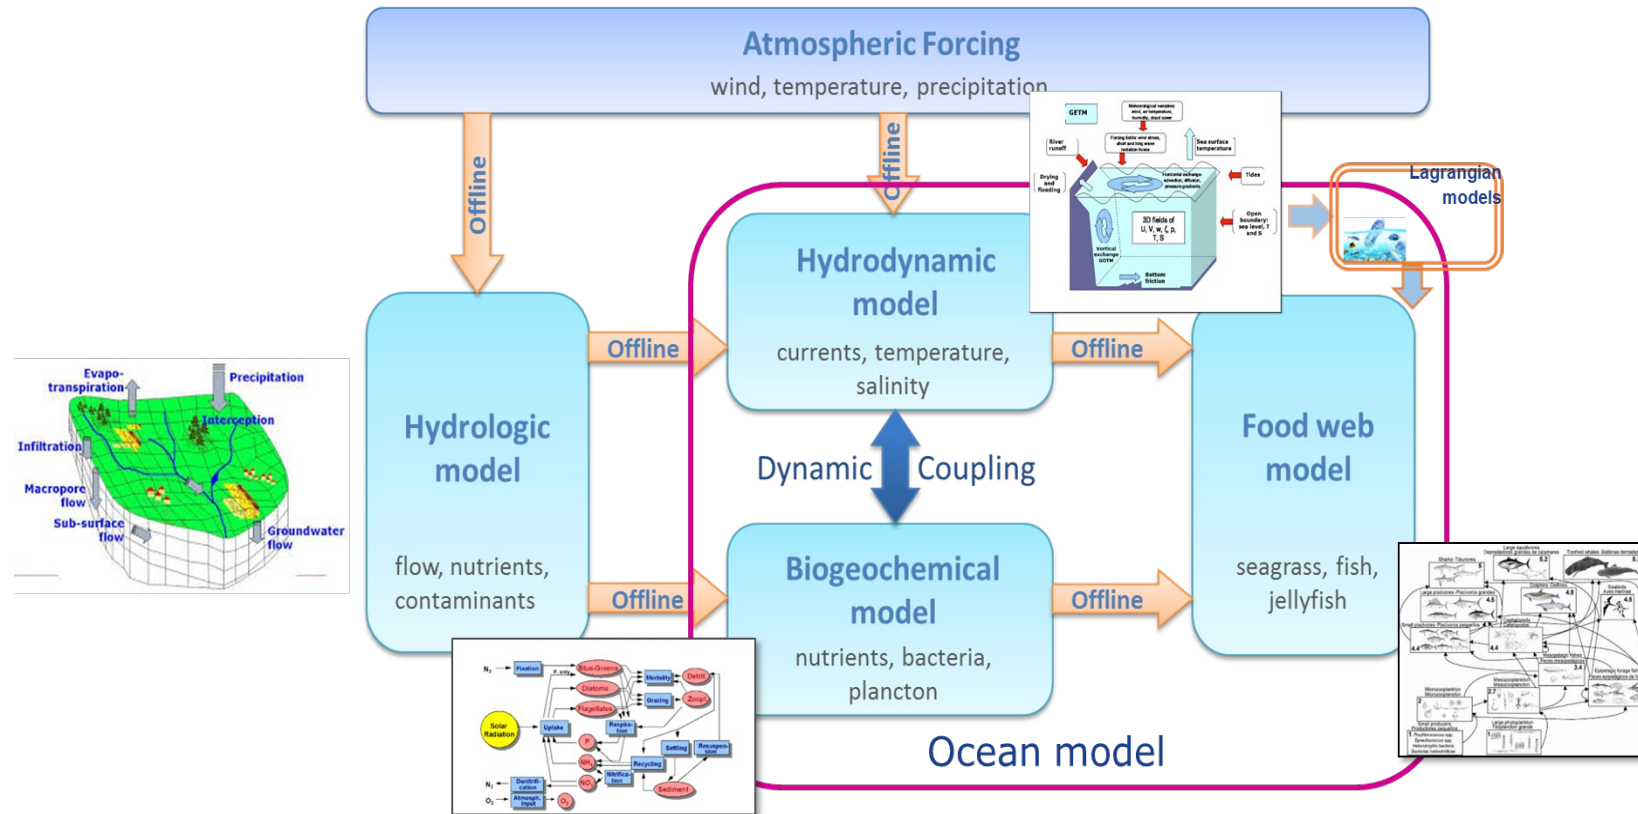

# A digital twin of the hydrosphere to evaluate policy options

Integrated modelling tool to simulate the impact of management options on the environmental status of EU water/marine ecosystems:

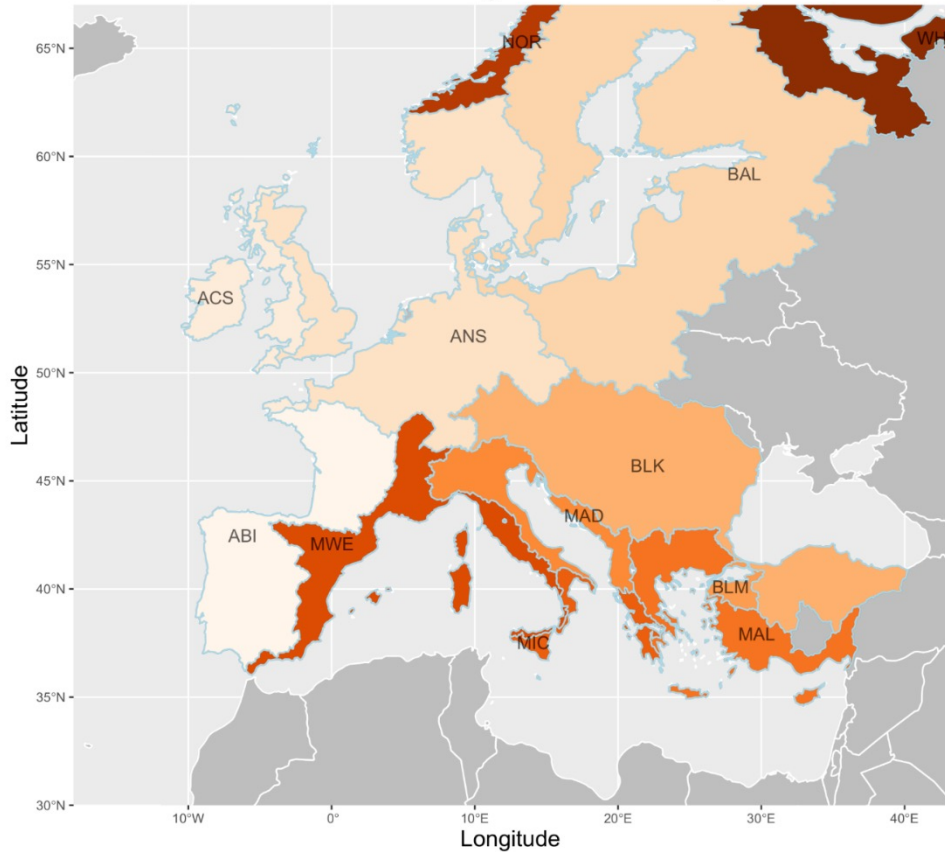

- land use,
- water use,
- diffusive and point source pollution of freshwater,
- hydrologic models,
- atmospheric depositions
- marine hydrodynamic-biogeochemical and food-web models

# Water/marine Zero Pollution outlook

## Reducing nutrient losses by 50%

Load of GREEN regions to MSFD regions

N is reduced more strongly than P

**Dedicated presentation tomorrow morning!**

**Impact of measures much higher in coastal regions**

# Water/marine Zero Pollution outlook

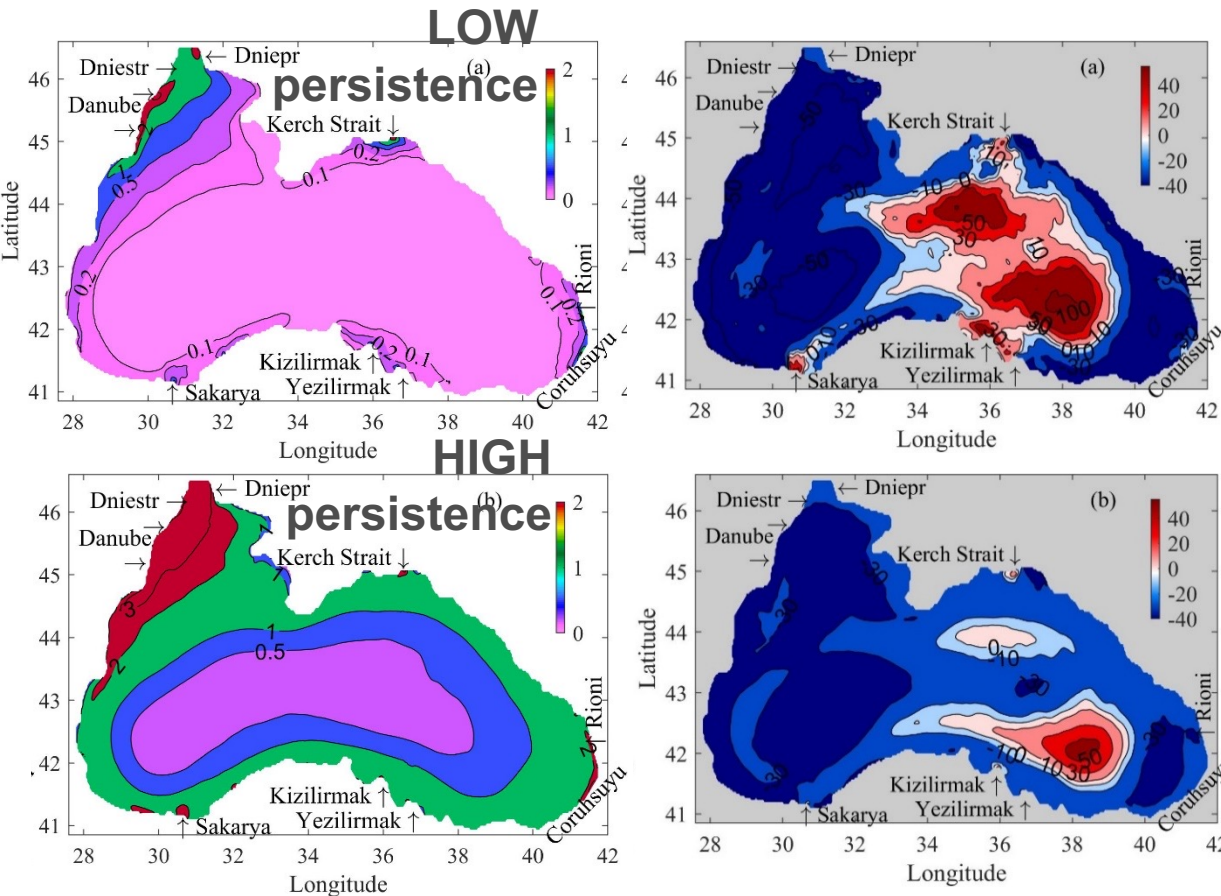

## Reducing pesticides use by 50%

Substance	Type	Persistency DT50 (day)	Relevance to EU policies
Terbutylazine	Pesticide	HIGH	Emerging (Tornero and Hanke, 2018)
Diuron	Pesticide	LOW	Priority list

General absolute reduction (larger for low persistence in shelf, opposite for high persistence)

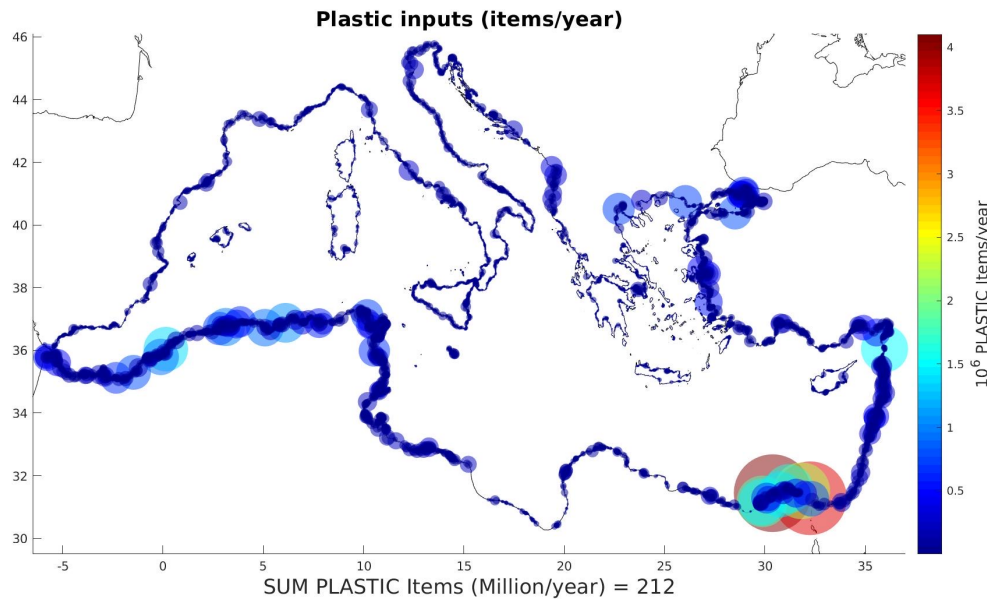

Potential accumulation in certain regions because of hydrodynamic changes (climate)

Reference (2016 – 2018) HAS rcp4.5 (2027 – 2030)

# Water/marine Zero Pollution outlook

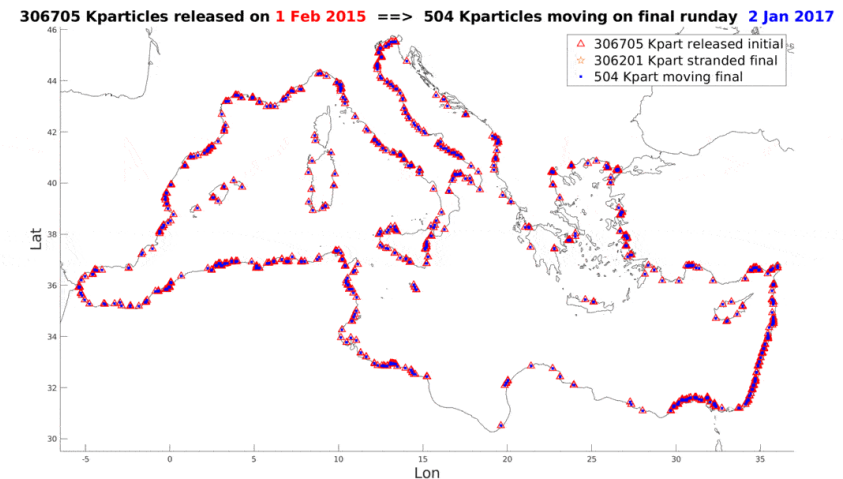

Reduce macroplastic at a sea by 50%

Macro-plastic inputs are largely unknown (but we can estimate them)

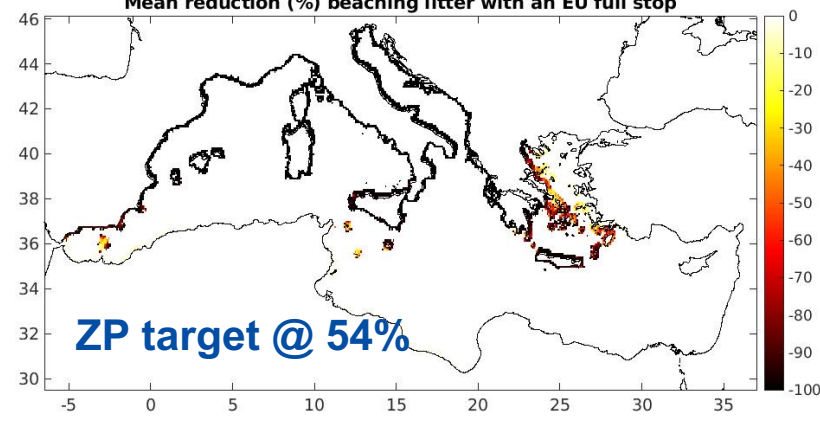

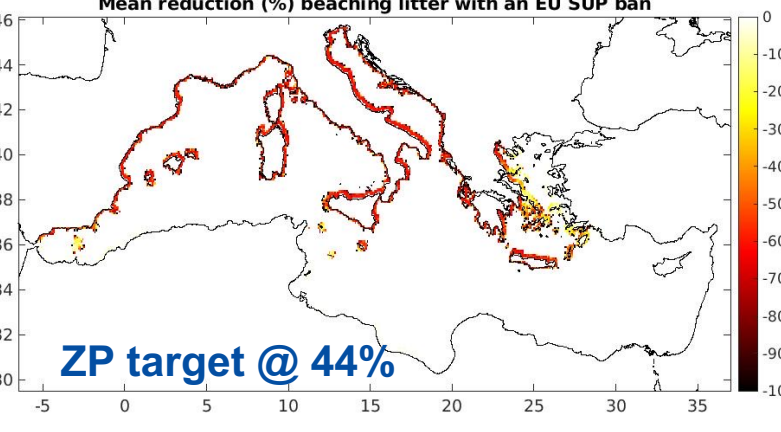

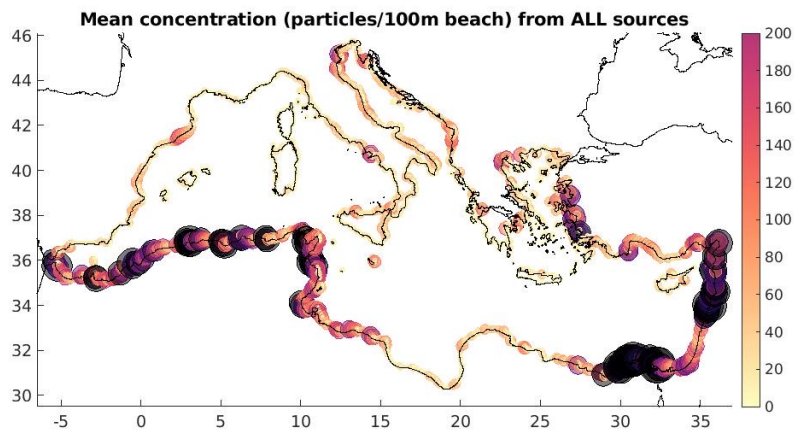

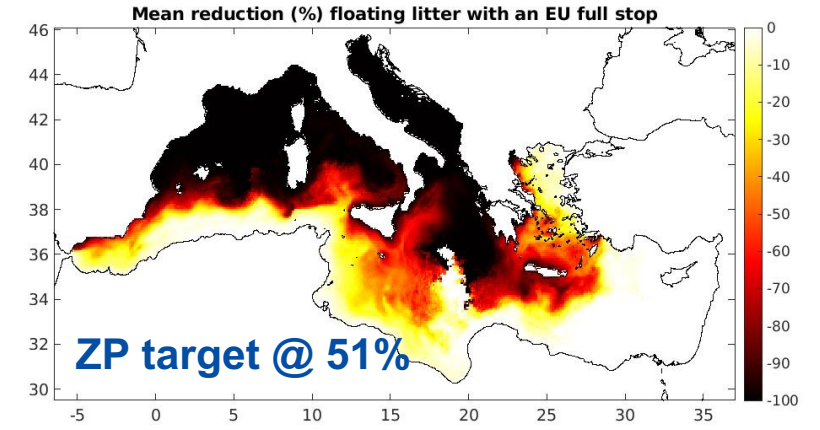

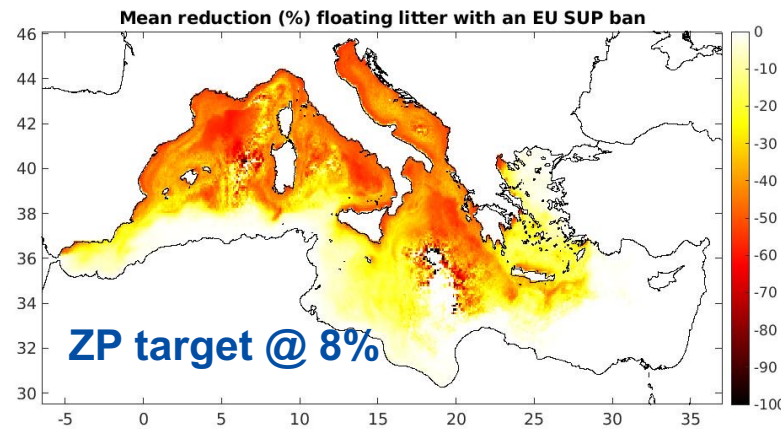

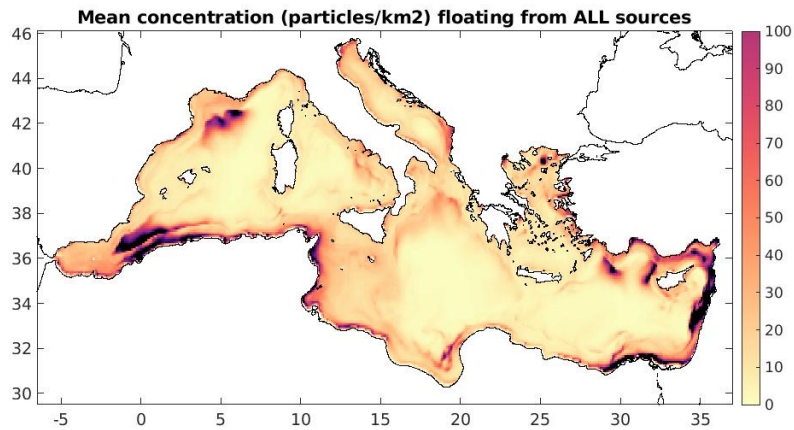

(Gonzalez et al., 2021 Nature Communications + EEA-EMODnet datasets)

A Lagrangian model moves particles around

# Water/marine Zero Pollution outlook

## Reduce macroplastic at a sea by 50%

Reference (2016 – 2018)

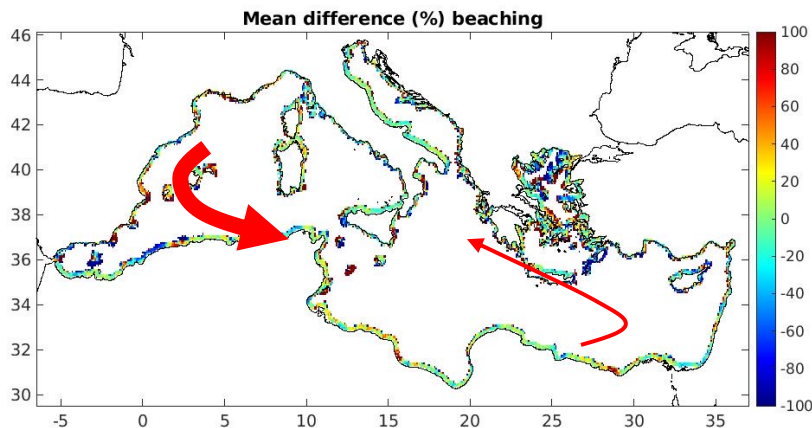

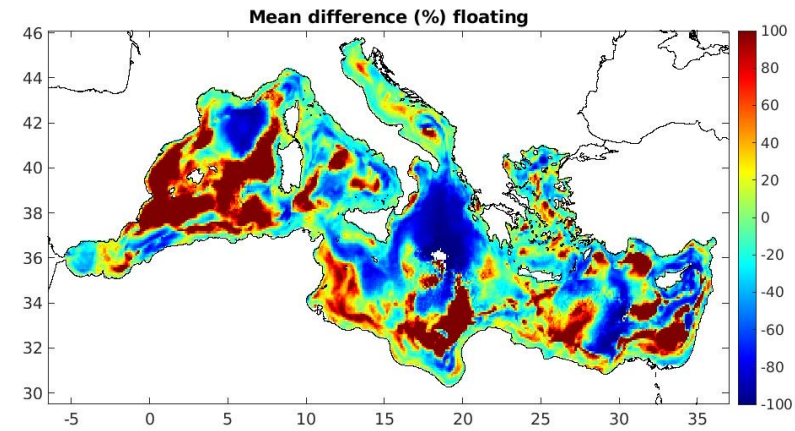

SUP ban in EU (2016 – 2018)

Plastics ban in EU (2016 – 2018)

# Water/marine Zero Pollution outlook

## Impacts of climate change on macroplastics distribution

Total plastic is not affected (by definition)

Cross-boundary pollution is altered:

- EU pollutes more non-EU coasts
- Non-EU pollutes less EU coasts

Reference (2016 – 2018)

HAS rcp4.5 (2027 – 2030)

# Water/marine Zero Pollution outlook

## Conclusions

- Planned actions/measures are driving pollution levels in the right direction but they might not be enough to achieve the ZP targets by 2030
- International dimension/cooperation might be important for achieving targets
- Climate change impacts can be relevant for understanding the importance of measures (synergic/antagonistic impacts)

# Clean Soil Outlook

EUSO Technical Working Group on soil pollution

*JRC D3 Team*

*Zero Pollution Monitoring and Outlook Workshop, 24-25 May 2022*

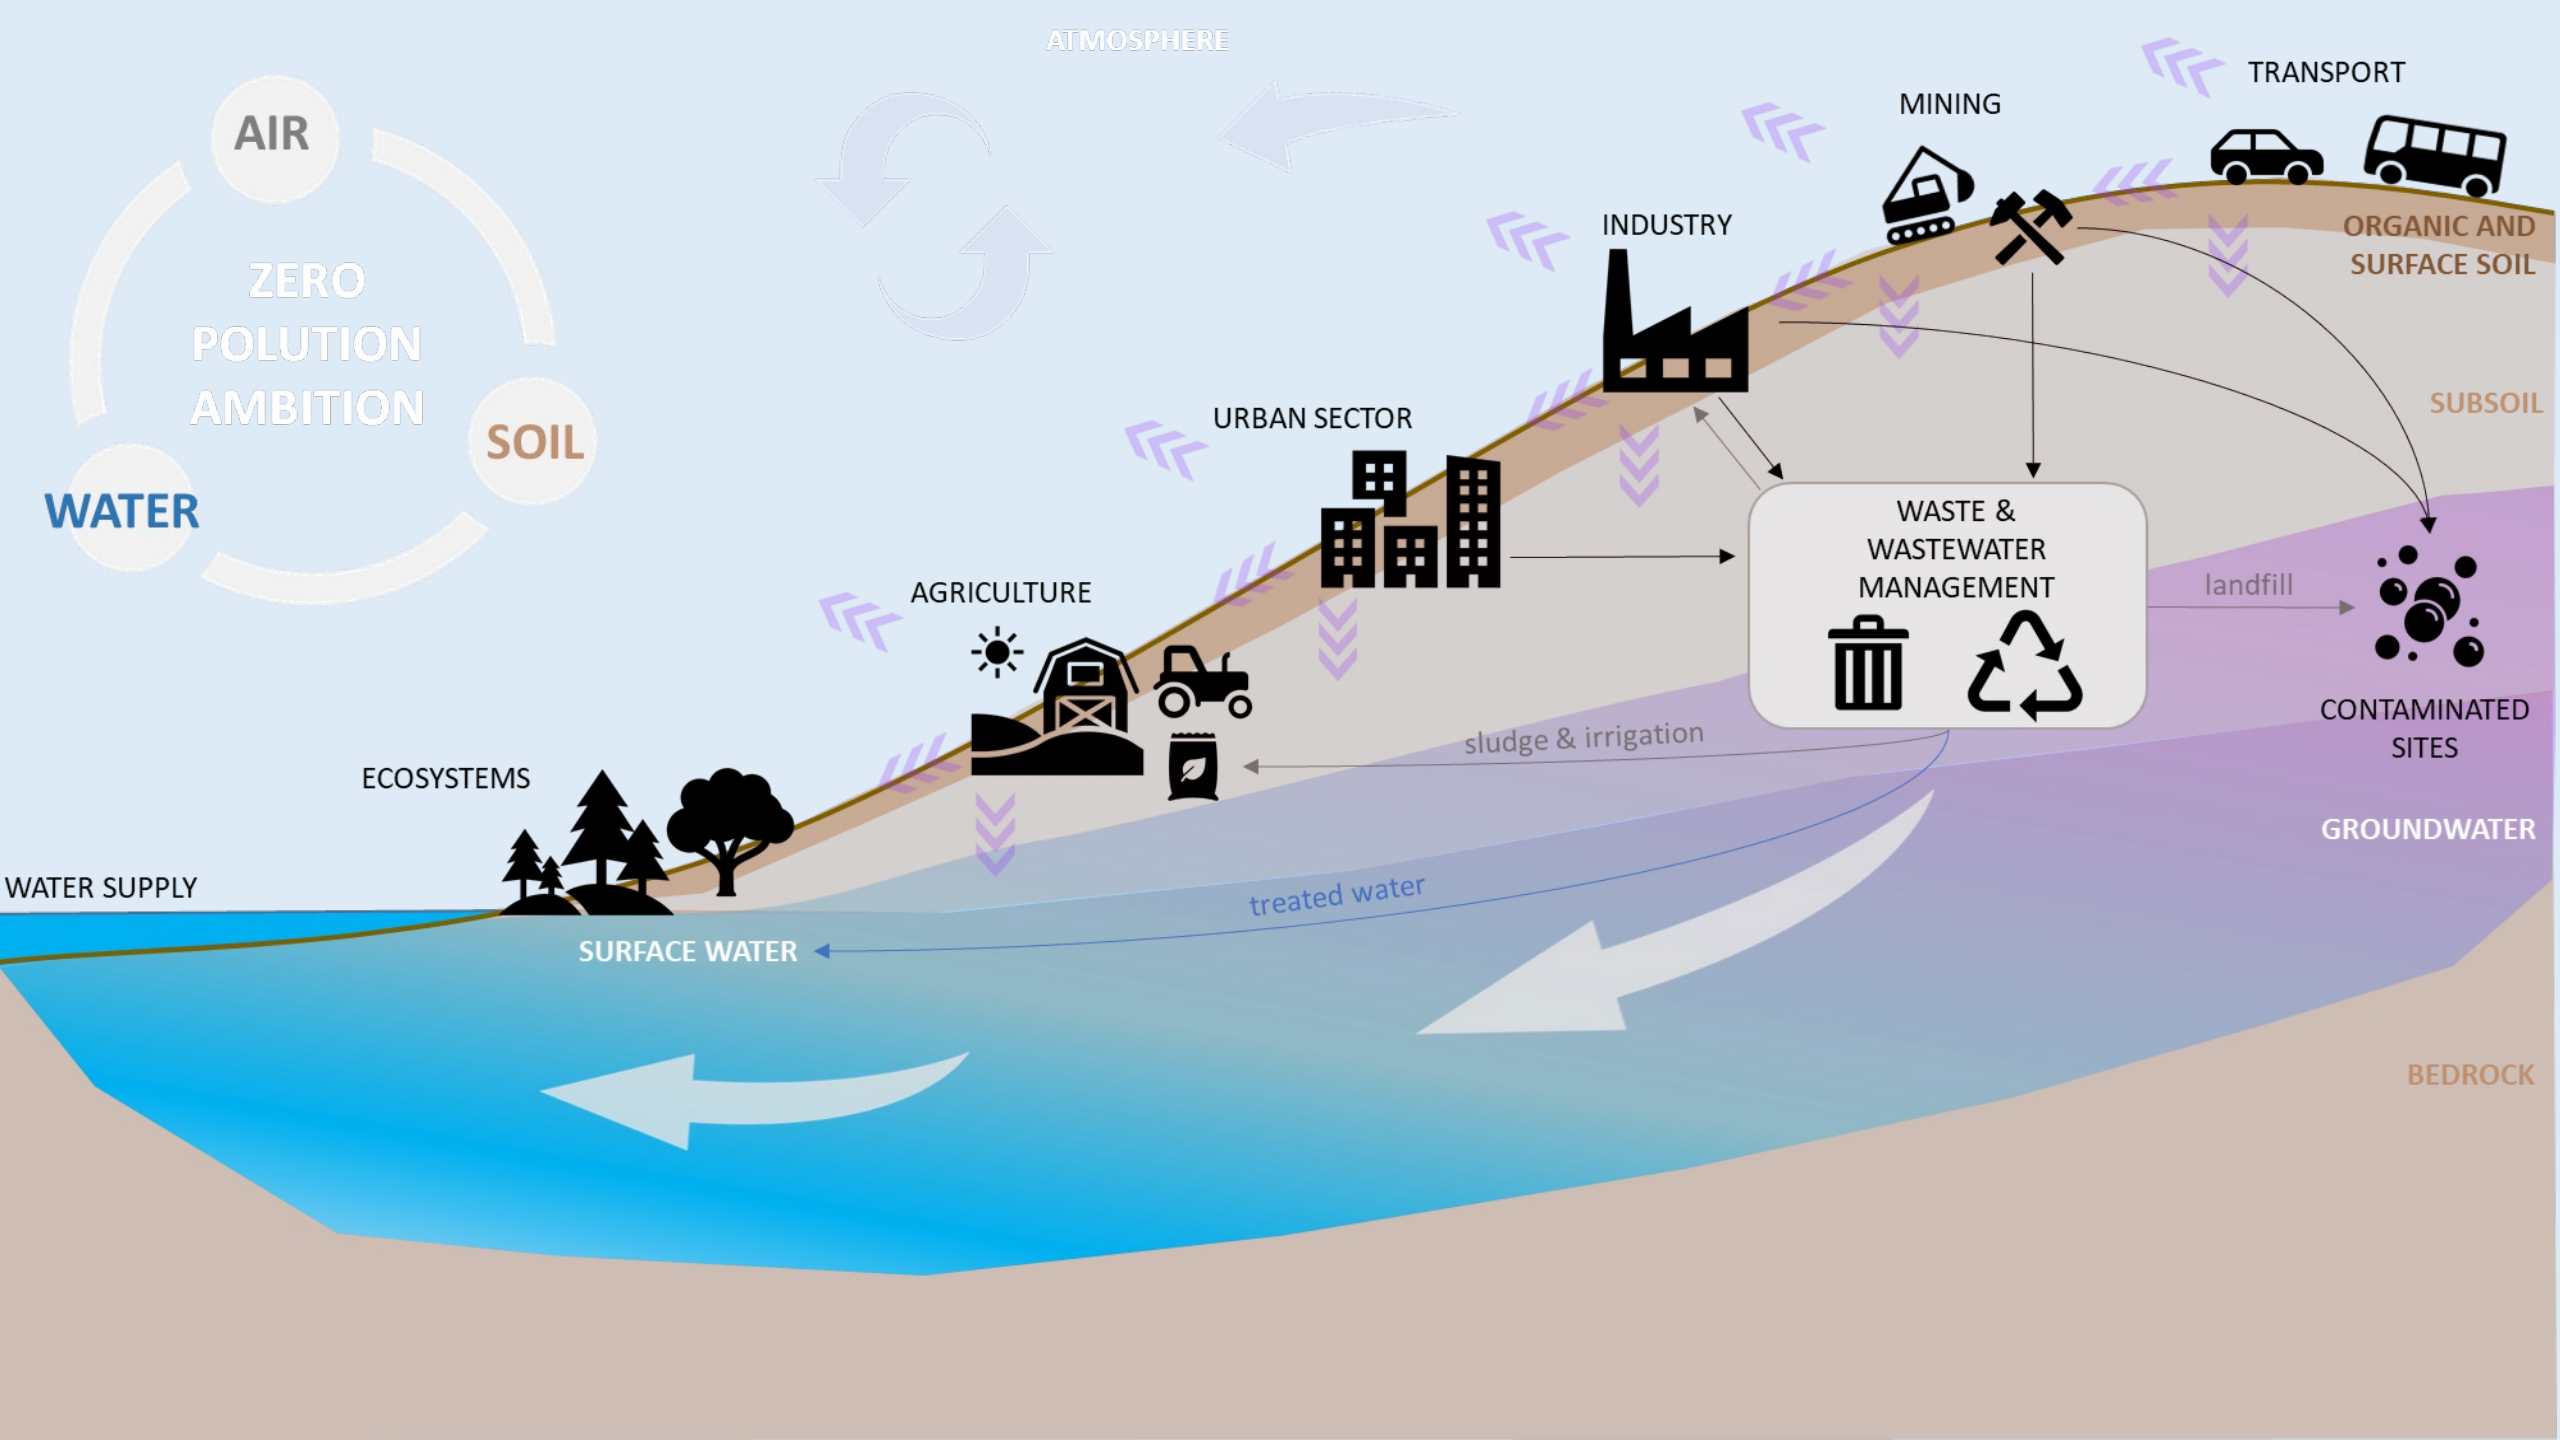

# Table of contents

- Objectives of the Clean Soil Outlook report
- Link to Monitoring report
  - R-DPSIR approach
  - Current Critical points in soil pollution (R, D, P, S)
- Outlook statements and possible trends (I)
- Novel outlook responses (R)
- Conclusions

# Objectives of the Clean Soil Outlook report

- analyse **synergies and trade-offs** between EU policies having impact on soil,
- Help to translate ‘**early warnings**’ into recommendations on pollutants of increasing concern based on the latest research: **watchlist**, (e.g. ultrafine particles, emerging contaminants, pesticides, metals, ...),
- analyse data and environmental landscape following the **R-DPSIR approach**,
- provide **projections, foresights** considerations,
- identify the monitoring and policy **gaps**, proposing how to **close them**.

# R-DPSIR

- R: do some Member States have better policy frameworks?
- D: are we able to identify/influence changes in Drivers?
- P: can we alleviate Pressures?
- S: State data gathered through monitoring
- I: Impacts on ecosystems and human health to be assessed
- R: novel range of responses? Because: it improves, it does not work, not enough time to notice, no knowledge, ... ?

# Critical statements on soil pollution

- The risks from soil pollution to human health and environmental well-being are well understood.
- Serious knowledge gaps exist regarding
  - inventory of point-type sources of pollution,
  - the extent of diffuse pollution,
  - the scale and impacts individual pollutants might have, are poorly quantified due to a lack of investment in monitoring and research, and reporting obligations.

# Critical statements on soil pollution

- The soil compartment is insufficiently addressed in risk assessment procedures for market authorisation.
- a holistic approach to the European legislation on “healthy soils”, addressing their sustainable management and protection, is missing.
- While several policy targets under the European Green Deal are expected to have a positive impact on soil pollution, there is a strong possibility that diffuse pollution from copper and the number of contaminated sites is expected to rise within the coming decade.

# Highlights

Outlook statements

# Challenges for point-type sources

- Will the EU be able to meet on the targets of the EU Soil Strategy for 2030
  - significant progress should be made in the remediation of contaminated sites by 2030, and
  - the inclusion of legally binding provisions on contaminated sites identification, inventorization and remediation.
- Waste managements and landfills
- Digital technologies

# Trends

- The number of identified potentially contaminated sites is expected to increase due to greater assessments and monitoring, coupled with ongoing activities with potential for soil pollution.
- Although some progress has been made, at current rate, we would need several generations to achieve a total remediation without taking into account the newly appeared (accidents) or registered (better inventorisation) contaminated sites.

# Challenges for diffuse pollution

- Is the EU able to create a toxic-free environment?
- A perceived obstacle is the lack of knowledge on the extent and impacts of diffuse pollution due to insufficient monitoring and research.
- Digital technologies

# Trends

- Pollution from the residues of plant protection products is expected to decline if the Farm2Fork Strategy's objectives to reduce the use of pesticides is fully implemented. This should not be compensated by the increased use of low-risk plant protection products.
- The target to increase EU organic farming by 25% of the agricultural areas, might lead to an increase of the use of copper-based plant protection products. Copper tends to accumulate in most soils and alters the uptake of the nutrient balance of soils (Biodiversity strategy).
- The adoption of the Integrated Nutrients action plan should lead to a reduction on the application of mineral nutrients, and their transport in water, air, and soil (Farm2Fork, Circular economy action plan).

# Trends

- Airborne pollution should also be reduced considering the on-going revision and the impact assessment of the Industrial Emissions Directive ((EU)2010/75/EU) under the European Green Deal and a possible evolution of the National Emissions Ceiling ((EU) 2016/2284), covering several pollutants and introducing ambitious reduction commitments to be achieved by 2030.
- A revised Sewage Sludge Directive could inadvertently lead to an increase microplastics present in sludge and being incorporated to soil. Legally binding thresholds of plastic in sludge should be defined. This could be complemented with actions addressing pharmaceuticals also in manure applied to soil.

# Responses

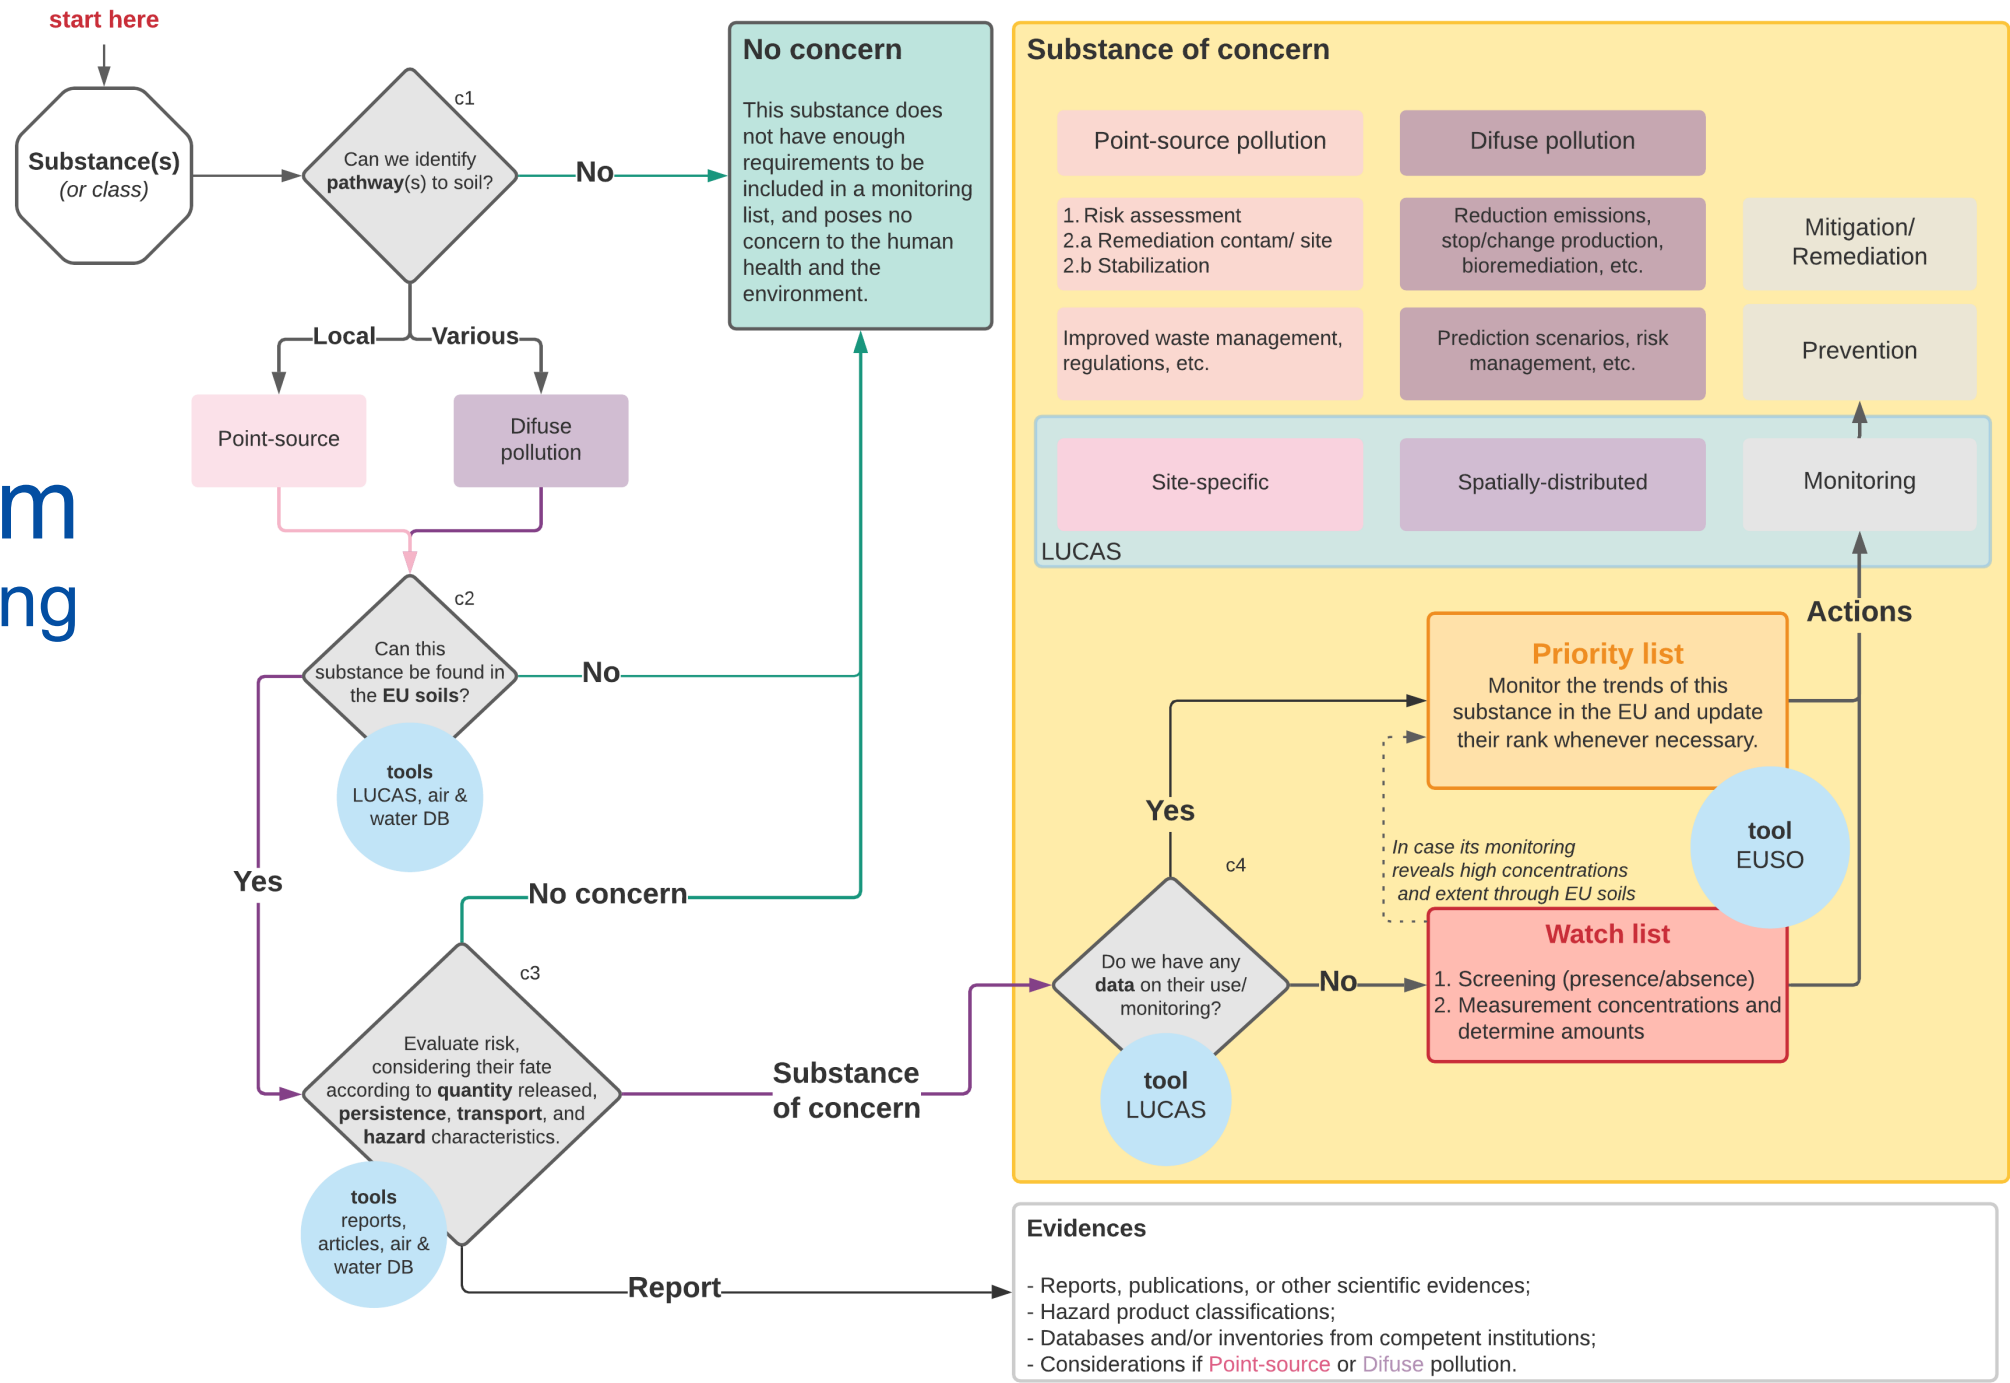

Novel outlook responses

# Novel outlook responses

- **Integrated Monitoring system** including a **watchlist mechanism** for early warnings on emerging contaminants: better inventory of contaminated sites and improved understanding of diffuse pollution through LUCAS soil pollution module and monitoring by MS to be in place.
- **Remediation** - Significant progress in the remediation of contaminated soils should be ensured through legal framework and adequate investment. Low-cost, bioremediation techniques and natural attenuation might be effective for organic compounds and heavy metals. In some cases appropriate measures of confinement or risk management are needed.
- **Knowledge** - Soil Pollution is transboundary and affects low- and middle-income countries.
- An **integrated modelling framework** will improve the traceability of emission sources and quantify the share of pollution contribution on soil per given media (water and air) and their interaction.
- **Legal obligations** - Need for legally binding instruments integrating monitoring and reporting tools such as the NEC Directive.

# Flux-diagram

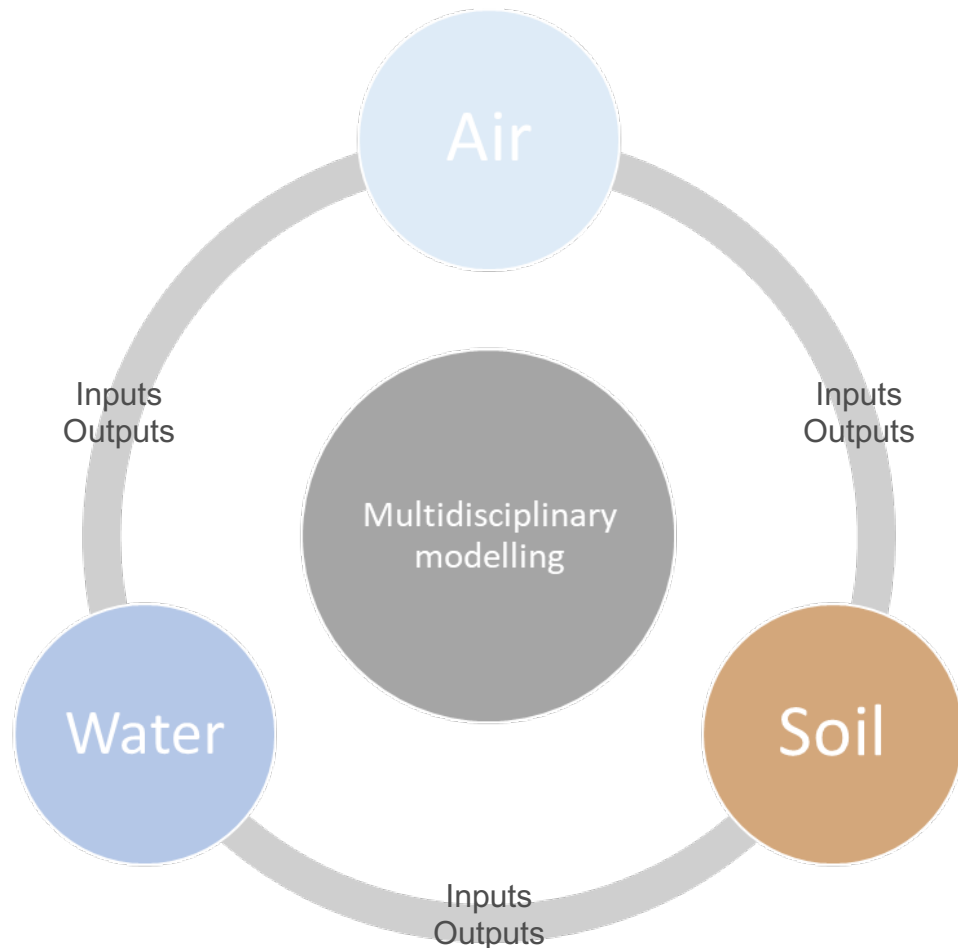

## Better monitoring

# Examples for different substances

- Flux-diagram was already tested for some substances:
  - Iron ➤ **No Concern**
  - Cadmium ➤ **Priority List**
  - Asbestos ➤ **Watch List**
  - Cesium ➤ **Priority List**

# Multidisciplinary modelling

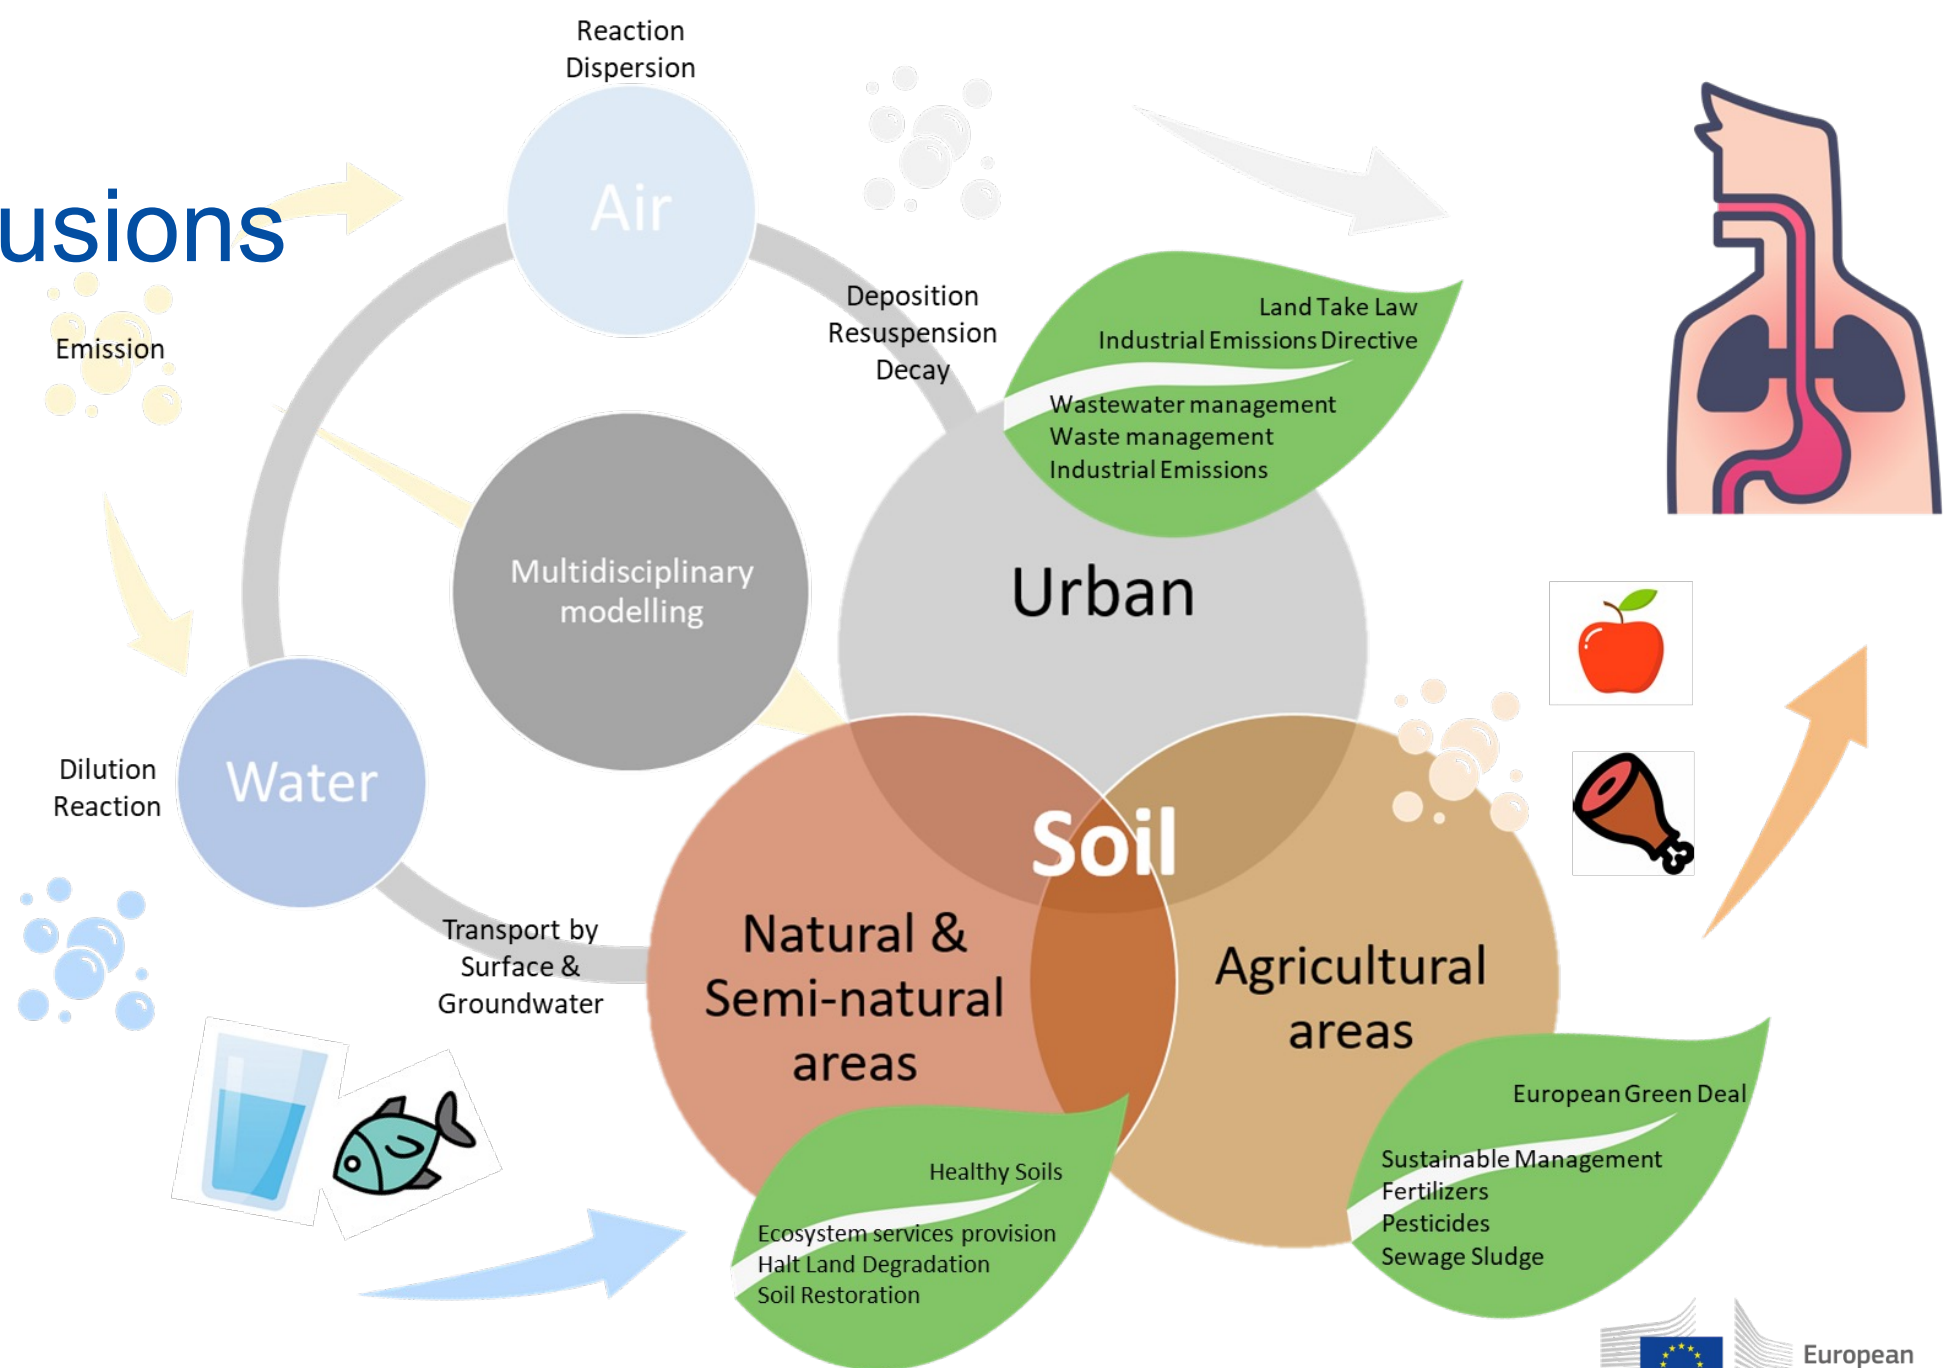

Complement to monitoring:

- Identify contribution of various sources of pollution;
- Take into consideration interactions between air, water and soil;
- Identify mixtures of pollutants;

# Consumption footprint

Serenella Sala, Jacopo Foschi, Esther Sanye Mengual

24/05/2022

# Consumption Footprint

Environmental emissions to air, water and soil

Potential Impact indicators

Assessment

- FOOD
- MOBILITY
- HOUSING
- HOUSEHOLD GOODS
- APPLIANCES

$$\text{Consumption} = \text{Domestic production} + \text{Imports} - \text{Exports}$$

## Planetary boundaries

## SDGs

**Mainly modelled emissions along the entire life cycle of products**

## European Platform on Life Cycle Assessment

# Consumption footprint platform

- Data per MS and per EU
- From 2010 to 2020
- Numerous features for exploring results
  - Decoupling
  - Planetary boundaries
  - SDGs

<https://eplca.jrc.ec.europa.eu/ConsumptionFootprintPlatform.html>

### Consumption Footprint Platform

#### CONSUMPTION FOOTPRINT PLATFORM

The European Commission has developed a **Life Cycle Assessment (LCA)-based framework to monitor the evolution of the overall environmental footprint of EU production and consumption** and compare the footprint against planetary boundaries. The Domestic Footprint and Consumption Footprint indicators respond to key challenges posed by the need of a systemic and holistic assessment of transition towards sustainability and represent a key set of indicators to support the ambitions of the [European Green Deal](#), such as circular economy ([Circular Economy Action Plan](#)), zero pollution ([Zero Pollution Action Plan](#)), sustainable food production ([Farm to Fork Strategy](#)) and biodiversity conservation ([EU Biodiversity Strategy for 2030](#)).

► DOMESTIC FOOTPRINT

► CONSUMPTION FOOTPRINT

► Assessment of DECOUPLING

► Comparing PRODUCTION and CONSUMPTION

► Consumption Footprint by PRODUCT

► Assessment against PLANETARY BOUNDARIES

► Assessment against SDGs

► DOWNLOAD DATA

► About

# Assumptions for the outlook scenario

Identification of drivers of the consumption footprint

- Macroeconomic indicators:
  - GDP
  - Household consumption expenditure
- Consumer profile (e.g. dietary habits)
- Transport fleet size and composition
- Households number and types

Definition of scenarios

- Business-as-usual scenario (only policies in place before 2018)
- «EU ambitions» scenarios:
  - Farm to fork
  - Clean Vehicles Directive
  - Renovation Wave

Evaluation and comparison with targets and boundaries

- Evaluation of scenarios projections until 2030
- Comparison of resulting environmental impact with:
  - ZPAP ambitions
  - Climate change ambition
  - Planetary boundaries

# Assumptions for the outlook scenario

## Business-as-usual

Based on projections of:

- GDP
- household consumption expenditure
- size and composition of transport fleet
- number of households

## Farm to fork

Action on drivers:

- Reduction of food waste
- Reduction of nutrient and pesticides use
- Plant-based diet

## Clean Vehicles Directive

Action on drivers:

change on the transport fleet composition

increase of hybrid and electric vehicles (target: 35% of transport fleet in 2030)

## Renovation Wave

Action on drivers:

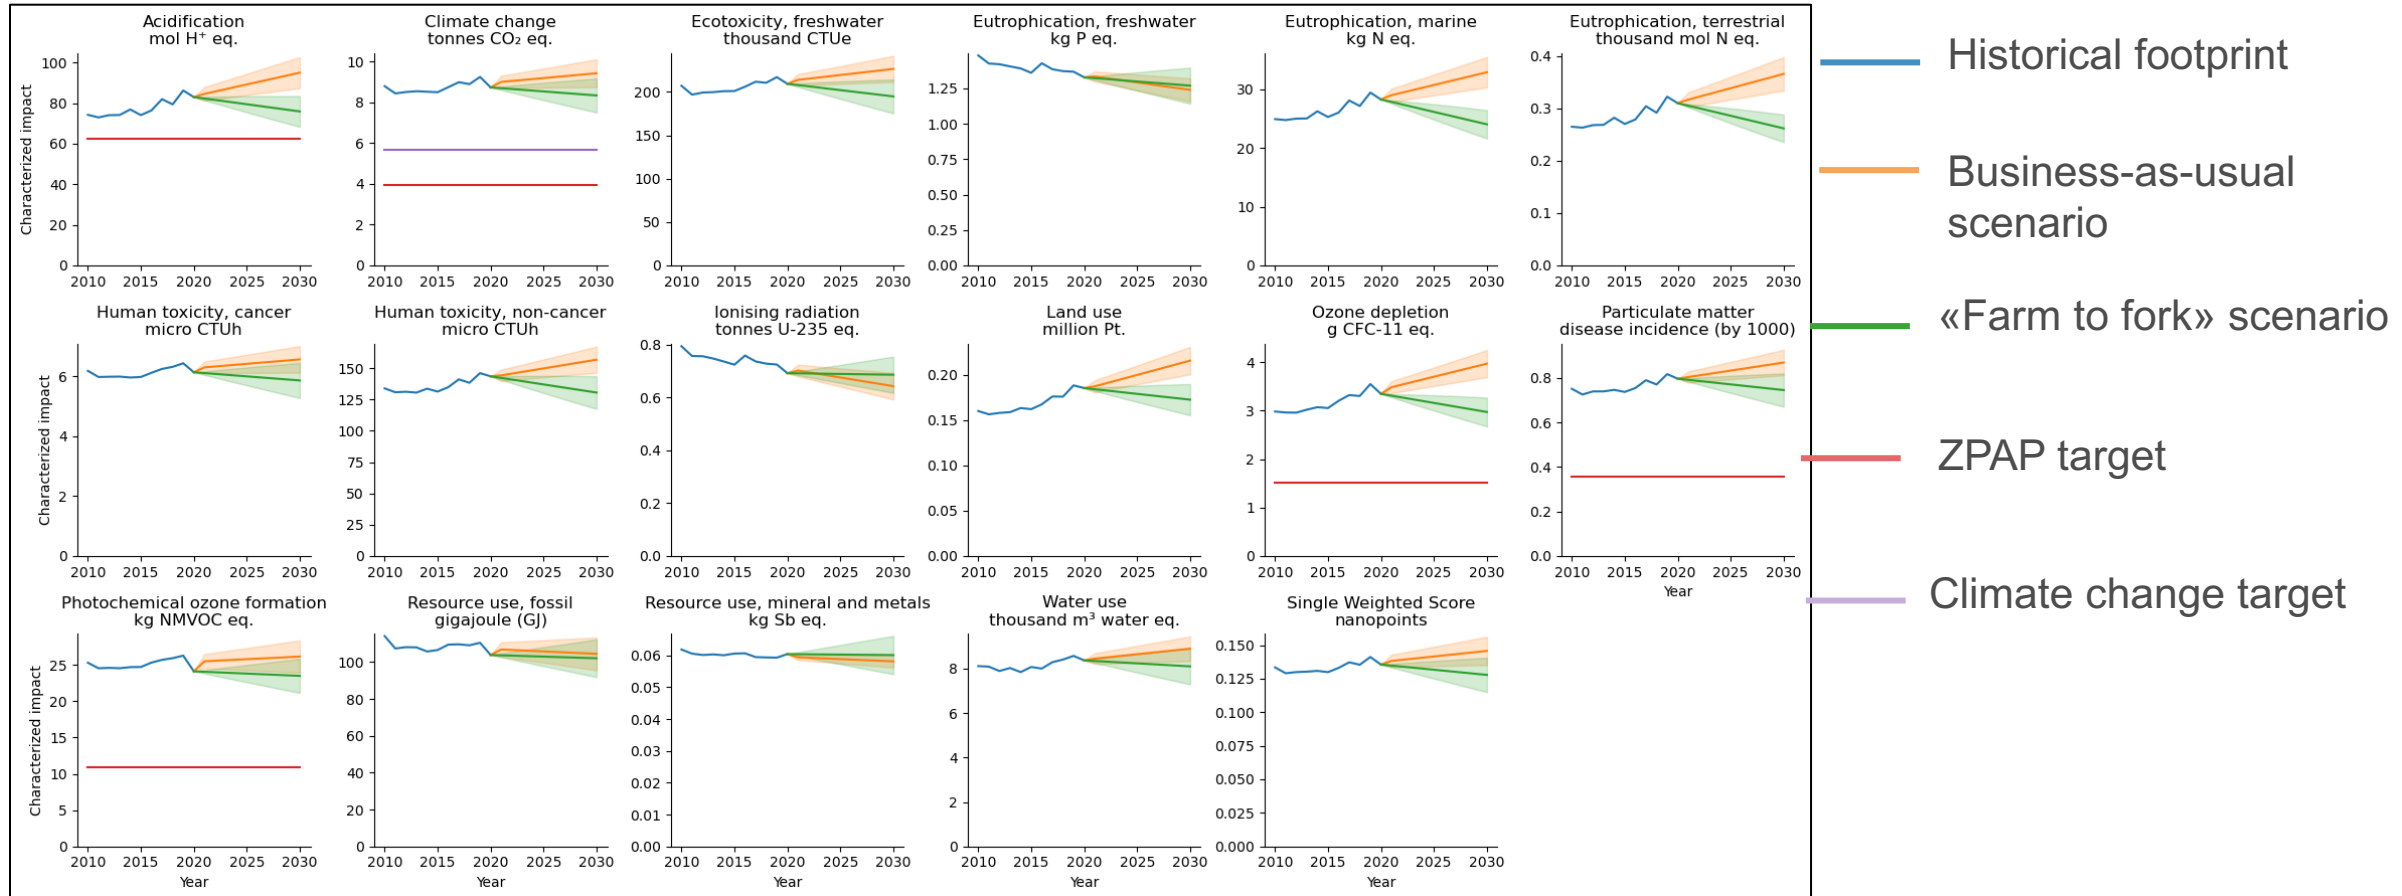

change in shares of type of households (age of construction)

renovation of old buildings (target: renovation of 35 millions building by 2030)

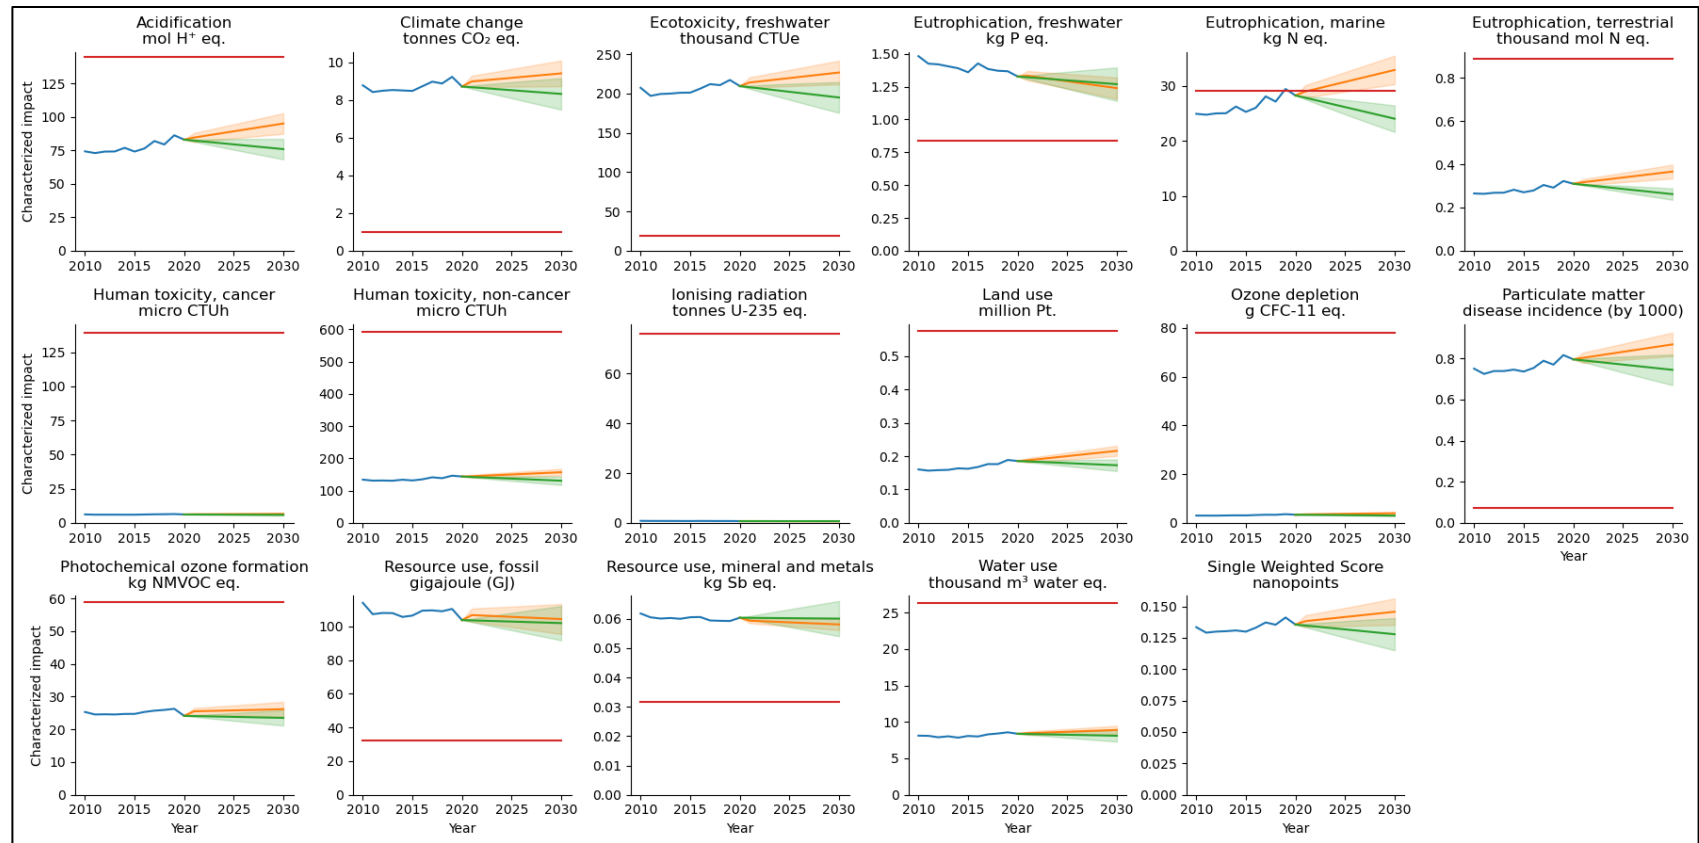

# Preliminary results of the outlook

Business-as-usual and Farm to fork scenarios - comparison with ZPAP and climate change ambitions

# Preliminary results of the outlook

Business-as-usual and Farm to fork scenarios - comparison with planetary boundaries

- Historical footprint
- Business-as-usual scenario
- «Farm to fork» scenario
- Planetary boundary

# Session 4: Discussion and conclusions

Presentations of the Zero Pollution Foresight Report

# Emerging issues impacting the delivery of a zero-pollution ambition by 2050

Summary of the outputs of the EU Environmental Foresight System (FORENV) 2020-21 annual cycle

# FORENV

**THE EU FORESIGHT SYSTEM FOR THE ENVIRONMENT**

Video link: <https://audiovisual.ec.europa.eu/en/video/l-223939?&lg=EN>

Issue 1

Urban settlement patterns and demographic change: implications for pollution

Issue 2

Will regenerative buildings and living materials in Europe help deliver the zero pollution ambition?

Issue 3

Purpose driven business: will the emergence of initiatives such as certified 'B' corporations play a major role in realising zero pollution?

Issue 4

Will regenerative agriculture emerge as a key trend in Europe that helps deliver the zero-pollution agenda?

Issue 5

Will new ways of pollution information provision influence behaviours towards low pollution lifestyles that go beyond current trends to low/zero waste?

Issue 6

Low pollution food: will new, less polluting, methods of producing protein, fats and tissues emerge to replace traditional agriculture?

Issue 7

An accelerating race to space: what will be the direct and indirect pollution impacts?

Issue 8

The COVID-19 pandemic has led to increased interest in resilience. Will a resilient Europe also be a zero pollution one?

Issue 9

Will new innovations in synthetic biology emerge that accelerate pollution reduction and mitigation?

Issue 10

Our growing digital consumption could challenge the 'zero pollution' ambition

# 5 key clusters

# Key questions for zero pollution policy

# Pollution risks from territorial shifts

An aerial photograph of a residential neighborhood with various colored houses and buildings. A semi-transparent white box is overlaid on the left side of the image, containing the title and two bullet points. The background shows a mix of urban and suburban architecture with green spaces interspersed.

- Will 'urbanised' hubs emerge in areas outside cities, and how can the pollution risks from these be managed?
- How can the EU support non-urban areas to become more resilient in the face of possible future demographic developments and pollution trends?

# Data informs or misinforms behaviour

- How can policy and stakeholder actions promote digital developments that increase public awareness of pollution, address the misrepresentation of information online (e.g. social media) and encourage people towards lower-pollution lifestyles?

# Scaling up new technologies

An aerial photograph of a modern building with a large, rectangular solar panel array installed on its flat roof. The building has a distinctive red facade on one side and a glass facade on another. The surrounding area is lush with green trees, and other residential buildings are visible in the background. The image is overlaid with a semi-transparent white box containing text.

- How can the EU stimulate innovation with new technologies while identifying and managing possible pollution risks as these are scaled up?

# International cooperation for zero pollution

- How can the EU, including public bodies and stakeholders, strengthen interregional and international cooperation on emerging risks and opportunities that will affect the achievement of our zero pollution ambition?

All final reports and videos are accessible via the FORENV website:  
[https://ec.europa.eu/environment/integration/research/forenv\\_en.htm](https://ec.europa.eu/environment/integration/research/forenv_en.htm)
