

## **Scaling Up CCS: A Look at Enabling Policies in Europe**

### **Program Overview**

With over 30 CCS facilities in various stages of development across the region, Europe is becoming a leader in the scale-up of carbon capture and storage – a key technology needed to decarbonise heavy industry.

Driving the deployment of CCS are fundamental policy mechanisms: from putting a price on carbon through the EU emissions trading system, to providing ample funding through the EU Innovation Fund. Despite this, to reach climate neutrality, the number of CCS facilities will need to rise by 100-fold by 2050. Join us as we assess some of the key enabling CCS policies and evaluate how, if at all, they can be enhanced.

### **Agenda**

- 10 Minutes: Remarks from the Institute – Guloren Turan, General Manager
- 35 Minutes: Panel Discussion with Climate Policy Experts [Speakers to be confirmed]
- 15 Minutes: Live Audience Q&A
